|---------------------------------------------------------------------|-----|
| Table of Changes .....                                              | 3   |
| PG01 – Agency Program Codes .....                                   | 20  |
| PG01 – Government Agency Processing Codes.....                      | 23  |
| PG01 – Electronic Image Submitted Codes.....                        | 27  |
| PG01 – Globally Unique Product Identification Code Qualifiers ..... | 27  |
| PG01 – Correction Indicators* .....                                 | 28  |
| PG02 – Product Code Qualifiers .....                                | 29  |
| PG04 – Units of Measure .....                                       | 31  |
| PG05 – Scientific Species Codes .....                               | 32  |
| PG05 – FWS Wildlife Description Codes .....                         | 33  |
| PG06 – Source Type Codes.....                                       | 36  |
| PG06 – Ocean Geographic Area Codes .....                            | 37  |
| PG06 – Processing Type Codes.....                                   | 38  |
| PG07 – Item Identity Number Qualifiers.....                         | 51  |
| PG10 – Category Type Codes .....                                    | 52  |
| PG10 – Category Codes .....                                         | 54  |
| PG10 – Commodity Qualifier Codes*.....                              | 74  |
| PG10 – Commodity Characteristic Qualifiers .....                    | 79  |
| PG14 – Type Codes.....                                              | 255 |
| PG14 – Exemption Codes .....                                        | 261 |
| PG19 – Entity Role Codes.....                                       | 267 |
| PG19 – Entity Identification Codes .....                            | 271 |
| PG22 – Document Identifiers .....                                   | 273 |
| PG22 – Declaration Codes .....                                      | 281 |
| PG23 – Food & Drug Affirmation of Compliance .....                  | 285 |
| PG23 – Food & Drug Affirmation of Compliance Qualifier Codes .....  | 288 |
| PG24 – Remarks Type Codes.....                                      | 289 |
| PG24 – Remarks Codes.....                                           | 290 |
| PG26 – Unit of Measure.....                                         | 294 |
| PG30 – Inspection or Arrival Location Codes.....                    | 300 |
| PG31 – Commodity Harvesting Vessel Characteristic Type Codes .....  | 301 |
| PG32 – Commodity Routing Type Codes .....                           | 302 |
| PG60 – Additional Information Qualifier Codes.....                  | 302 |
| PG32 – Commodity Political Subunit of Routing Qualifier .....       | 303 |

## Table of Changes

| T09                                  | Wine, artificially carbonated                               |
| T10                                  | Other Sparkling Wines                                       |
| T11                                  | Hard Cider                                                  |

## PG01 – Electronic Image Submitted Codes

| <i>Code</i> | <i>Name</i> | <i>Definition</i>                      |
|-------------|-------------|----------------------------------------|
| Y           | Yes         | Image(s) for PGA use will be submitted |

## PG01 – Globally Unique Product Identification Code Qualifiers

| <i>Code</i> | <i>Name</i>                  | <i>Definition</i>                                                                                                                                           |
|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SRV         | GS1 Global Trade Item Number | A globally unique 14-digit number assigned to a product according to the numbering structure of the GS1 system.                                             |
| AI          | UPC (Universal product code) | A globally unique number assigned to consumer units of a product for use at point-of-sale registers according to the numbering structure of the GS1 system. |

## PG01 – Correction Indicators\*

| <i>Code</i>          | <i>Name</i> | <i>Definition</i>                                                                                                               |
|----------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------|
| A<br>(FUTURE<br>USE) | Add         | PGA data, not previously submitted, should be added.<br>(FUTURE USE)                                                            |
| D                    | Delete      | When provided on a PGA line that also has a PGA line number of '000', all PGA data associated with the agency should be removed |
| R<br>(FUTURE<br>USE) | Replace     | PGA data should be replaced<br>(FUTURE USE)                                                                                     |

\*Please refer to the PGA data corrections (CA/CC) CATAIR spec for details on using these codes

## PG02 – Product Code Qualifiers

| <b>Code</b> | <b>Name</b>                                              | <b>Definition</b>                                                                                                                                                                      |
|-------------|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACC         | Accession Number (for EPA)                               | Number assigned by EPA to identify a chemical substance on the TSCA non-Confidential Chemical Substances Inventory, whose identity has been claimed confidential business information. |
| AVB         | APHIS Veterinary Biologics Product Code                  | A product number assigned by APHIS Veterinary Services, Center for Veterinary Biologics.                                                                                               |
| CAS         | Chemical Abstract Services number                        | Unique numerical identifiers assigned by the "Chemical Abstracts Service" to every chemical described in the open scientific literature                                                |
| CSA         | Controlled Substances Act number                         | Unique numerical identifiers assigned by the Drug Enforcement Administration to each controlled substance                                                                              |
| FDP         | FDA - Product Code                                       | The FDA Product Code represents a product whose importation is regulated by FDA. It incorporates the following information: Industry, Class, Subclass; Process Indicator Code; Product |
| FAI         | Fuel/Additive ID                                         | A product registration number that any manufacturer or importer of gasoline, diesel fuel, or a fuel additive must obtain from EPA prior to its introduction into commerce.             |
| GPC         | Global Product Classification Brick Code                 | An 8-digit number designating a set of products with similar characteristics as defined by GS1 at <a href="http://www.gs1.org/gsmp/kc/gpc">http://www.gs1.org/gsmp/kc/gpc</a> .        |
| SSK         | Institutional Meat Purchase Specifications (IMPS) Number | A number assigned by agricultural authorities to designate the cut and product form of meat and meat products.                                                                         |
| LOR         | LoREX Number                                             | A number assigned by EPA to identify a chemical substance that meets the low release and exposure requirements at 40 CFR section 723.50.                                               |
| LVE         | LVE Number                                               | A number assigned by EPA to identify a chemical substance that has a production volume (PV) at or less than the 10,000 kg/year limit under the requirements at 40 CFR section 723.50.  |
| NDC         | National Drug Code                                       | A unique, three-segment number/universal product identifier for human drugs.                                                                                                           |
| PC          | PC Code                                                  | A six-digit number assigned by OPP to identify regulated substances under Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).                                                 |
| PMN         | PMN Number                                               | A number assigned by EPA to identify a new chemical substance that is manufactured or imported for a non-exempt commercial purpose under section 5 of TSCA.                            |
| PRI         | Product ID Number                                        | Code that identifies the Product ID used in the CPSC Product Registry                                                                                                                  |
| PRIV        | Product ID Version Number                                | Code that identifies the Product ID version number used in the CPSC Product Registry                                                                                                   |
| SSL         | Price Look-Up code (PLU)                                 | Identification number affixed to produce in stores to retrieve price information.                                                                                                      |

| <i>Code</i> | <i>Name</i>                                                    | <i>Definition</i>                                                                                                                                                           |
|-------------|----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SKU         | Stock Keeping Unit                                             | A reference number used by a manufacturer to distinguish one product from the others it manufactures.                                                                       |
| TME         | TME Number                                                     | A number assigned by EPA to identify a chemical substance that is manufactured or imported for Test Market Exemption (TME) under the requirements at 40 CFR section 720.38. |
| TSN         | Taxonomic Serial Number                                        | A unique serial number assigned to a taxonomic unit by the Integrated Taxonomic Information System at <a href="http://www.itis.gov">http://www.itis.gov</a> .               |
| UNS         | UN Standard Products and Services Code (UNSPSC) Commodity Code | An 8-digit number designating a set of products with similar characteristics as defined by the United Nations at <a href="http://www.unspsc.org">http://www.unspsc.org</a>  |

## PG04 – Units of Measure

| US Department of Justice, Drug Enforcement Agency |                    |
|---------------------------------------------------|--------------------|
| <i>Code</i>                                       | <i>Description</i> |
| <b>MCG</b>                                        | Micrograms         |

DEA Note: In addition to the units of measure in Appendix C, the above UOM can be used for DEA.

| Lacey Act Codes |                    |
|-----------------|--------------------|
| <i>Code</i>     | <i>Description</i> |
| <b>G</b>        | Grams              |
| <b>MM</b>       | Millimeters        |
| <b>MM2</b>      | Square Millimeters |
| <b>MM3</b>      | Cubic Millimeters  |
| <b>CG</b>       | Centigrams         |
| <b>CM</b>       | Centimeter         |
| <b>CM2</b>      | Square Centimeter  |
| <b>CM3</b>      | Cubic Centimeter   |
| <b>KG</b>       | Kilogram           |
| <b>M</b>        | Meter              |
| <b>M2</b>       | Square Meter       |
| <b>M3</b>       | Cubic Meter        |
| <b>ML</b>       | Mililiter          |
| <b>CTL</b>      | Centiliter         |
| <b>L</b>        | Liter              |
| <b>KL</b>       | Kiloliter          |

Lacey Act:

**Note:** Piece and Number counts are not acceptable for describing the Quantity of Plant Material in a shipment.

**Note:** The Lacey Act requires that a Quantity of Plant Material be reported for EACH genus/species/country combination declared.

**Note:** Only these Unit of Measure codes are valid for the Lacey Act and they apply to both the PG04 and the PG29 records for Lacey.

## PG05 – Scientific Species Codes

| US Department of Commerce, National Marine Fisheries Service (NMFS)                                                                                                          |                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|

## PG05 – FWS Wildlife Description Codes

| <b>Code</b> | <b>Name</b>                                                                                                          |
|-------------|----------------------------------------------------------------------------------------------------------------------|
| BAL         | Baleen                                                                                                               |
| BAR         | Bark (raw, dried, powdered, unprocessed)                                                                             |
| BOC         | Bone product or carving                                                                                              |
| BOD         | Dead animal (whole animal)                                                                                           |
| BON         | Bone (including jaw, but not skull)                                                                                  |
| BOP         | Bone piece (not manufactured)                                                                                        |
| BUL         | Bulb, corm or tuber                                                                                                  |
| CAL         | Calipee (turtle cartilage for soup)                                                                                  |
| CAP         | Carapace (raw or unworked)                                                                                           |
| CAR         | Carving (other than bone, horn or ivory)                                                                             |
| CAV         | Caviar (unfertilized dead processed sturgeon or paddlefish eggs)                                                     |
| CAVA100     | Caviar (unfertilized dead processed sturgeon or paddlefish eggs) and Intergeneric hybrid (cross between two genera)  |
| CAVA103     | Caviar (unfertilized dead processed sturgeon or paddlefish eggs) and Interspecies hybrid (cross between two species) |
| CHP         | Chip timber                                                                                                          |
| CLA         | Claw (including talon)                                                                                               |
| CLO         | Cloth                                                                                                                |
| COR         | Coral (raw or unworked, excluding live or coral rock)                                                                |
| CPR         | Coral products                                                                                                       |
| CSM         | Cosmetics                                                                                                            |
| CUL         | Cultures of an artificially propagated plant                                                                         |
| CUT         | Cutting (plant, including division)                                                                                  |
| DEA         | Dead specimen (live specimen that died during shipment)                                                              |
| DER         | Derivative (except those included elsewhere)                                                                         |
| DERA100     | Derivative and Intergeneric hybrid (cross between two genera)                                                        |
| DERA103     | Derivative and Interspecies hybrid (cross between two species)                                                       |
| DPL         | Dried plant                                                                                                          |
| EAR         | Ear (except when part of whole trophy)                                                                               |
| EGG         | Egg (whole dead or blown excluding caviar)                                                                           |
| EGL         | Egg (live)                                                                                                           |
| EGLA100     | Egg (live) and Intergeneric hybrid (cross between two genera)                                                        |
| EGLA103     | Egg (live) and Interspecies hybrid (cross between two species)                                                       |
| ESH         | Eggshell - (raw or unworked)                                                                                         |
| EXT         | Extract                                                                                                              |
| EXTA100     | Extract and Intergeneric hybrid (cross between two genera)                                                           |
| EXTA103     | Extract and Interspecies hybrid (cross between two species)                                                          |
| FEA         | Feather                                                                                                              |
| FIB         | Fiber (plant fiber, tennis racket string)                                                                            |

| <i>Code</i> | <i>Name</i>                                                                                                                                |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| FIG         | Fingerling (juvenile fish of one or two years age for the aquarium trade, hatchery or release operation)                                   |
| FIN         | Fin - (fresh, frozen or dried fins or part)                                                                                                |
| FLO         | Flower                                                                                                                                     |
| FOO         | Foot                                                                                                                                       |
| FPL         | Fur Products Large ((large manufactured products of fur, including blankets or other fur products of substantial size)                     |
| FPS         | Fur Products Small (small manufactured products, including handbags, keyfobs, purses, pillows, trim, etc.)                                 |
| FPT         | Flower pot (made of tree fern or other plant fiber)                                                                                        |
| FRU         | Fruit                                                                                                                                      |
| GAB         | Gall bladder                                                                                                                               |
| GAL         | Gall                                                                                                                                       |
| GAR         | Garment (excluding shoe or trim)                                                                                                           |
| GEN         | Genitalia (castrate and dried penis)                                                                                                       |
| GIL         | Gill plates (gill plates (e.g. for sharks)                                                                                                 |
| GRS         | Graft rootstocks                                                                                                                           |
| HAI         | Hair                                                                                                                                       |
| HAP         | Hair product ( including paint brush)                                                                                                      |
| HOC         | Horn carving (including horn or antler products)                                                                                           |
| HOP         | Horn piece (not manufactured)                                                                                                              |
| HOR         | Horns (substantially whole horns or antlers)                                                                                               |
| IJW         | Ivory jewelry                                                                                                                              |
| IVC         | Ivory carvings                                                                                                                             |
| IVP         | Ivory piece (not manufactured, includes scraps)                                                                                            |

| SPE         | Specimen (scientific or museum, including blood, tissue, histological preparation)                                                                                               |
| SPR         | Shell product (mollusk or turtle)                                                                                                                                                |
| STE         | Stems (plant)                                                                                                                                                                    |
| SWI         | Swim bladder (hydrostatic organ, including isinglass, sturgeon glue)                                                                                                             |
| TAI         | Tail                                                                                                                                                                             |
| TEE         | Teeth (excluding tusk)                                                                                                                                                           |
| TIM         | Timber (raw except log or sawn wood)                                                                                                                                             |
| TRI         | Trim (shoe, garment, or decorative)                                                                                                                                              |
| TRO         | Trophy (all the parts of one animal, if they are exported together; e.g. horns, skull, cape, backskin, tail and feet constitute one trophy)                                      |
| TRU         | Trunk (elephant trunk; Note: an elephant trunk included with other trophy items from the same animal on the same permit as part of a hunting trophy should be reported as "TRO") |
| TUS         | Tusk (substantially whole, worked or not)                                                                                                                                        |
| UNS         | Unspecified                                                                                                                                                                      |
| VEN         | Veneer (thin layers of wood of uniform thickness, usually less than 6mm)                                                                                                         |
| WAX         | Wax (including ambergris)                                                                                                                                                        |
| WNG         | Wing                                                                                                                                                                             |
| WPR         | Wood product (including furniture, rainsticks)                                                                                                                                   |

## PG06 – Source Type Codes

| <b>Code</b> | <b>Name</b>                  | <b>Definition</b>                                                                                                                                                       |
|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CDB         | Country of Deboning          | The country where the item was deboned.                                                                                                                                 |
| CMN         | Country of Manipulation      | The country where the item is packaged, labeled, and released for export to the United States.                                                                          |
| 244         | Country of Meat Cutting      | Country where the meat is cut into pieces.                                                                                                                              |
| CPK         | Country of Packing           | Country where the item is packaged.                                                                                                                                     |
| CPR         | Country of Processing        | Country where the item is processed.                                                                                                                                    |
| 39          | Country of Production        | Country where item has been produced.                                                                                                                                   |
| CSH         | Country of Shipment          | Country from which the article is shipped. (This information is mandatory for shipment subject to FDA Prior Notice.)                                                    |
| 243         | Country of Slaughter         | Country where the animal was slaughtered.                                                                                                                               |
| CSL         | Country of Slicing           | The country where the item was sliced.                                                                                                                                  |
| 30          | Country of Source            | Country in which raw material or components originated.                                                                                                                 |
| 267         | Country of species origin    | The place where the species was taken from the wild, or the place where the species was born, artificially propagated, grown or harvested.                              |
| CST         | Country of Storage           | Country in which the item is stored.                                                                                                                                    |
| 294         | Country of Refusal           | Country that refused the product                                                                                                                                        |
| HRV         | Harvested                    | Where item was harvested (this code must be used for the Lacey Act).                                                                                                    |
| HCF         | Harvest of capture fisheries | Animals harvested (exploited) by the public as a common property resource, with or without appropriate licenses. Also characterized as “wild caught” animals.           |
| HBA         | Hatchery based aquaculture   | Harvested animals that have been owned by individuals or corporate bodies throughout their entire life cycle from spawning to harvest.                                  |
| PMH         | Pen Matured Harvest Capture  | Animals captured alive and held in pens for feeding and growth until harvested.                                                                                         |
| SVH         | Small Vessel Harvest         | Wild caught animals that were aggregated at a single collection point on a single day totaling no more than 20 gross tons by vessels less than 12 meters length overall |
| 256         | Place of packing             | Place where the item was packaged.                                                                                                                                      |
| 262         | Place of growth              | Place where the item was grown.                                                                                                                                         |
| 268         | Place of catch               | Place where the animal was caught, e.g. area of the ocean where the fish was harvested.                                                                                 |

## PG06 – Ocean Geographic Area Codes

| <b>Code</b> | <b>Name</b>                                  | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A           | Atlantic                                     | An ocean bounded by: the Arctic Ocean along a line arbitrarily designated as lying along a system of submarine ridges that extend between land masses of Baffin Island, Greenland, and Scotland; the Mediterranean Sea at Strait of Gibraltar; the Caribbean Sea along arc of the Antilles; the Indian Ocean on the east by the 20° east meridian; and from the Pacific on the west along the line of shallowest depth between Cape Horn and Antarctic Peninsula. |
| CAR         | Caribbean Sea                                | A sea, enclosed on the north and east by the islands of the West Indies, and bounded on the south by South America and Panama, and on the west by Central America separated from the Atlantic ocean along the arc of the Antilles.                                                                                                                                                                                                                                |
| GM          | Gulf of Mexico                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| EA          | Eastern Atlantic Ocean                       | Atlantic ocean, east of 45 W. longitude.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| EPO         | Eastern Pacific Ocean east of 150 W          | Pacific ocean, east of 150 W. longitude.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ETP         | Eastern Tropical Pacific Ocean east of 160 W | Pacific ocean, east of 160 W. longitude, between 40 N. and 40 S. latitude.                                                                                                                                                                                                                                                                                                                                                                                        |
| IND         | Indian Ocean                                 | Ocean bounded on the west by Africa, on the north by Asia, on the east by Australia and Australasian islands, and on the south by the Southern Ocean. A line 4,000 km (2,500 mi) long on the 20th meridian east of Greenwich, connecting Cape Agulhas at the southern end of Africa with Antarctica, is generally considered to be the boundary between it and Atlantic ocean.                                                                                    |
| MED         | Mediterranean                                | Inland sea of Europe, Asia, and Africa, separated from the Atlantic Ocean at its western end by the Strait of Gibraltar.                                                                                                                                                                                                                                                                                                                                          |
| NAT         | North Atlantic                               | Atlantic ocean, north of the equator.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| NP          | North Pacific Ocean                          | Pacific ocean, north of 40 N. ## PG07 – Item Identity Number Qualifiers

| <b>Code</b> | <b>Name</b>                         | <b>Definition</b>                                                                                                                                                      |
|-------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALT         | Alternate Identifier                | A unique identifier of the product that does not align with the other Identity Number Qualifiers' categories provided                                                  |
| AKG         | Vehicle Identification Number (VIN) | The identification number which uniquely distinguishes one vehicle from another through the lifespan of the vehicle.                                                   |
| ASH         | ASHRAE Number                       | American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Number                                                                              |
| ENN         | Engine Number                       | Identification number of an engine.                                                                                                                                    |
| MN          | Model Number                        | The model number of the product.                                                                                                                                       |
| NMT         | NMFS Tag Number                     | For NMFS, the individual tag number of the fish                                                                                                                        |
| SE          | Serial Number                       | Identification number of an item, which distinguishes this specific item out of a number of identical items.                                                           |
| RN          | Registered number                   | Registered Number(s)                                                                                                                                                   |
| BN          | Brand Name                          | The brand name of the product.                                                                                                                                         |
| BND         | Band                                | Identification method often used on aves (birds).                                                                                                                      |
| BRD         | Brand                               | A distinct and legible mark, properly applied with a freeze brand, hot iron, or other method, and easily visible on the live animal and on the carcass before skinning |
| BQG         | Bouquet Grouping                    | Cut Flowers Bouquet Grouping Code                                                                                                                                      |
| CHP         | Microchip                           |                                                                                                                                                                        |
| LAT         | Live Animal Tag                     | Used to track live animals e.g. cattle.                                                                                                                                |
| RID         | RFID                                | Radio Frequency Identification                                                                                                                                         |
| SRX         | Slaughter number                    | Unique number given by a slaughterhouse to an animal or a group of animals of the same breed.                                                                          |
| SRY         | Official animal number              | Unique number given by a national authority to identify an animal individually.                                                                                        |
| TO          | Tattoo                              |                                                                                                                                                                        |

## PG10 – Category Type Codes

| Code                                           | Name                                                             | Definition                                                                                                                                                                                                                                                                                                                                                                      |
| 101                                            | <i>Bos and Bison</i> (Domestic Cattle, Humped cattle, and Bison) | <i>Bos and Bison</i> are two <u>genus</u> of the <u>tribe</u> Bovini (Bovine). This genus is made up of large to very large grazers, including large animals of great economic significance to humans. Domestic cattle ( <i>Bos taurus</i> ), American Bison ( <i>Bison bison</i> ), and Humped cattle ( <i>Bos indicus</i> ) are the three genus recorded as Bovine for APHIS. |
| 102                                            | Cervidae (Deer, Elk, Moose)                                      | Deer are the ruminant mammals forming the <u>family</u> Cervidae. Species in the family include white-tailed deer, mule deer such as black-tailed deer, elk, moose, red deer, reindeer (caribou), fallow deer, roe deer, pudú and chital.                                                                                                                                       |
| 103                                            | Camelidae (Camel)                                                | Camelids are members of the biological <u>family</u> Camelidae, the only currently living family in the suborder Tylopoda. The extant members of this group are: dromedary camel, Bactrian camels, wild or feral camels, llamas, alpacas, vicuñas, and guanacos.                                                                                                                |
| 104                                            | <i>Capra</i> (Goat)                                              | <i>Capra</i> is a <u>genus</u> of mammals, the goats or wild goats, composed of up to nine species, including the wild goat, the markhor, and several species known as ibex. The domestic goat ( <i>Capra aegagrus hircus</i> ) is a domesticated subspecies of the wild goat ( <i>Capra aegagrus</i> ).                                                                        |
| 105                                            | <i>Ovis</i> (Sheep)                                              | <i>Ovis</i> is a <u>genus</u> of mammals, part of the goat-antelope subfamily of the ruminant family Bovidae. It's five or more, highly sociable species are known as sheep. The domestic sheep is one member of the genus, and is thought to be descended from the wild mouflon of central and southwest Asia.                                                                 |
| 106                                            | Suinae (Swine)                                                   | Suinae is a <u>subfamily</u> of mammals that includes at least some of the living members of the family Suidae and their closest relatives—the domestic pig and related species, such as babirusas.                                                                                                                                                                             |
| 107                                            | <i>Equus</i> (Horse)                                             | <i>Equus</i> is a <u>genus</u> of mammals in the family Equidae, which includes horses, asses, and zebras. Within Equidae, <i>Equus</i> is the only recognized extant genus, comprising seven living species. The term <u>equine</u> refers to any member of this genus, including horses.                                                                                      |

| APHIS Article Category – AP0100 (Live Animals) |                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 108                                            | <i>Trichosurus</i> (brush-tail possums)                              | The brush-tail possums are the members of the <u>genus</u> , <i>Trichosurus</i> , a genus of marsupial in the Phalangeridae family.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 109                                            | Erinaceinae (Hedgehog)                                               | A hedgehog is any of the spiny mammals of the <u>subfamily</u> Erinaceinae, which is in order Erinaceomorpha. There are seventeen species of hedgehog in five genera, found through parts of Europe, Asia, Africa and New Zealand (by introduction).                                                                                                                                                                                                                                                                                                                       |
| 110                                            | Tenrecidae (Tenrec)                                                  | The Tenrec is any species of mammal within the <u>family</u> Tenrecidae, found on Madagascar and in parts of the African mainland.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 111                                            | Galloanserae (Poultry)                                               | Galloanserae is the <u>superorder</u> known as Poultry / Fowl with birds belonging to one of two biological orders, namely the gamefowl or landfowl (Galliformes - turkey, grouse, chicken, New and Old World quail, ptarmigan, partridge, pheasant, junglefowl and the Cracidae) and the waterfowl (Anseriformes - ducks, geese, and swans). Studies of anatomical and molecular similarities suggest these two groups are close evolutionary relatives; together, they form the fowl clade which is scientifically known as Galloanserae (initially termed Galloanseri). |

| 801                                                        | Cut Flowers | Cut flowers are flowers or flower buds (often with some stem and leaf) that have been cut from the plant bearing it. It is usually removed from the plant for indoor decorative use. Typical uses are in vase displays, wreaths and garlands. |

| BBAB                                                       | American Bison (Buffalo) | <p>The bovine family (taurids and bisonids) diverged from the common ancestral line with water buffalo and African buffalo about 5 to 10 million years ago.[17] Thereafter, the family lineage of bison and taurine cattle does not appear to be a straight forward "tree" structure as is often depicted in much evolution, because there is evidence of interbreeding and crossbreeding between different species and members within this family, even many millions of years after their ancestors separated into different species. This cross breeding was not sufficient to conflate the different species back together, but it has resulted in unexpected relationships between many members of this group, such as Yak being related to American bison, when such relationships would otherwise not be apparent.</p> <p>This includes both subspecies: plains bison (Bison bison bison) and woods bison (Bison bison athabasca)</p> |

There are now 30,000 domesticated buffalo in tuberculosis and brucellosis free areas in Australia's Northern Territory. Feral buffalo number over 80,000.                                                                                                                                                                                                                                                                                                                       |
| BBEG                                                              | Egyptian (Buffalo)       | The Egyptian buffalo is kept as a draft animal and for milk production. They are grey-black with short curved horns. The varieties include Baladi (lower Egypt) and Saidi in upper Egypt.                                                                                                                                                                                                                                                                                                                                                                                       |
| BBEB                                                              | European Bison (Buffalo) | The European bison (Bison bonasus), also known as wisent (/ˈviːzənt/ or /ˈwiːzənt/) or the European wood bison, is a Eurasian species of bison. It is one of two existing species of bison, alongside the American bison. European bison were hunted to extinction in the wild, with the last wild animals being shot in the Białowieża Forest (on the Poland-Belarus border) in 1919 and in the northwestern Caucasus in 1927. They have since been reintroduced from captivity into several countries in Europe, all descendants of the Białowieża or lowland European bison. |

| CAAA                                                       | Aulie-Ata (Cattle)          | The creation of this breed started in 1885 in the Aulie-Ata district of Kirgizia. The local Kazakh cattle were crossed with the Dutch Black Pied breed and the crosses were bred inter se. The crossbreds gradually spread to other regions of Kirgizia and Kazakhstan and to some areas of Uzbekistan.                                                   |
| CAAB                                                       | Anatolian Black (Cattle)    | Anatolia, the Asia Minor portion of Turkey, has supported short horned cattle since the Hittite period over 4000 years ago. Today the Anatolian Black is Turkey's most popular breed. It is hardy, disease resistant and tolerant of poor care, meager diet and adverse climate conditions.                                                               |
| CAAC                                                       | Argentine Criollo (Cattle)  | The Argentine Criollo is one of the Criollo type cattle found in the Americas and include the Texas Longhorn among others. The origin of Criollo cattle goes back to the first bovines brought by Columbus in his travels to America in 1493. These cattle were selected in Andalusia and they spread in the New World with the colonization expeditions. |
| CAAD                                                       | Australian Braford (Cattle) | The Australian Braford breed was developed in Queensland in the period between 1946 and 1952. It is now a stabilized breed with approximately 50 percent Hereford and 50 percent Brahman genetic background.                                                                                                                                              |
| CAAE                                                       | Ankole (Cattle)             | The Ankole cattle are distributed from Lake Mobutu to Lake Tanganyika in eastern Africa. The original animals were thought to have been brought to northern Uganda by Hamitic tribes sometime between the 13th and 15th centuries.                                                                                                                        |

| CAAO                                                       | Allmokekor (Cattle)          | These cattle were very important for agriculture Sweden in the past. It is as important to preserve old living domestic livestock, as it is to preserve old objects and buildings.                                                                                                                                                                                      |
| CAAQ                                                       | American White Park (Cattle) | The American White Park is a large white breed with black or red points (ears, nose and eyes). Cows average 1000 pounds and bulls between 1700-1800 pounds. The cattle are predominately polled with 3 to 5% horned. They are docile and the cow's milk well.                                                                                                           |
| CAAS                                                       | Asturian Mountain (Cattle)   | Asturian Mountain is a local Spanish beef breed of enormous foraging capacity and good maternal ability. It is reared in extensive conditions in the East of the "Principado de Asturias", in the north of Spain, mainly in the mountain range of the "Picos de Europa" within the National Park of Covadonga.                                                          |
| CAAT                                                       | Amrit Mahal (Cattle)         | Amrit Mahal literally means the department of milk. Originally the rulers of Mysore State had started an establishment of cattle collected from the prevalent types of cattle within the area for the supply of milk and milk products to the palace.                                                                                                                   |
| CAAU                                                       | Aubrac (Cattle)              | The Aubrac are found in Aveyron-Lozère, France. Their development started during the 1600's at the Benedictine Abbey of Aubrac in the south of France, where the controlled breeding was practiced until the Abbey was destroyed during the French Revolution. Selective breeding was promoted between 1840 and 1880, with Brown Swiss blood used to improve the breed. |
| CAAV                                                       | Asturian Valley (Cattle)     | The Asturian Valley is a local Spanish beef breed of enormous foraging ability and good maternal qualities reared in extensive conditions in the southwest of the "Principado de Asturias" in the North of Spain.                                                                                                                                                       |
| CAAW                                                       | Ankole-Watusi v              | Ankole-Watusi cattle are the show-stoppers of the bovine kingdom. Medium-sized animals, with long, large-diameter horns, they attract attention wherever they appear. These regal animals can easily trace their ancestry back more than 6,000 years and have often been referred to as "cattle of kings."                                                              |

| CAFB                                                              | Fighting Bull (Cattle)              | A subspecies of auroch, <i>Bos taurus Ibericus</i> , is thought to be the ancestor of the all the dark colored breeds found on the Iberian peninsula including the Fighting bull or Fighting cattle. The breed is selected primarily for aggressiveness, strength and vigor. They are bred primarily in Spain, Portugal and those Latin American countries where bull fighting is organized. |
| CAFC                                                              | Florida Cracker/Pineywoods (Cattle) | Florida Cracker Cattle are Florida's equivalent to the better known Texas Longhorn. Florida Cracker Cattle, Texas Longhorn Cattle and the various breeds of Central and South America cattle known collectively as Criollo cattle all descend from the original cattle imported into the Americas by the Spanish. The name Florida Cracker has only been used in recent years.               |

| CAGA                                                              | Galloway (Cattle)                   | Historian's writings differ somewhat, but upon three points they generally agree regarding the origin of the Galloway. The breed is recognized to be a very ancient one, with obscure origins shrouded in antiquity and its' name derived from the word Gallovid or Gaul. The Gauls were the native inhabitants of the regality known as the Province of Galloway.                           |

| CAGB                                                       | Galician Blond (Cattle)  | The Galician Blond are of the North Spanish type and are used primarily for meat production. Their normal coloration is cream to golden red. Originating in northwestern Spain, the original type, which was found in Monteroso and Carballino, is almost extinct. Simmental, Swiss Brown and South Devon have been used at different times to improve the breed during the 1900s.                                                                                                                                                                   |
| CAGY                                                       | Gelbray (Cattle)         | Elaborate facilities and high priced cattle sales were signs of the times. These were cattle with funny names and multiple colors from the shores of Europe. Simmental, Limousin, Gelbvieh, Maine Anjou, Chianina and others were becoming common breeds in our pastures.                                                                                                                                                                                                                                                                            |
| CAGC                                                       | Gloucester (Cattle)      | Gloucester Cattle are an ancient breed, numerous in the Severn Vale as early as the 13th century. They were valued for their milk (producing double Gloucester Cheese), their beef, and for producing strong and docile oxen. However, in the last two centuries, outbreaks of disease, the introduction of other breeds, and the development of intensive farming, led to such a reduction in their numbers that by 1972 only one herd remained. Fortunately, at its dispersal sale a group of purchasers determined that the breed should survive. |

| CAGL                                                       | Glan (Cattle)      | Their color is yellow. They originated in the late 18th century from the Swiss Brown x native. In 1890, they were united with Donnersberg to form the Glan-Donnersberg which was a variation of the Gelbvieh until 1961. Since 1950, it has been crossed with the Danish Red and has been included in the German Red since 1961.                                                                                                                                                                                                                                             |
| CAGN                                                       | Angeln (Cattle)    | The Angeln may have existed for over 5000 years in Germany. In Angeln, the northern part of Schleswig-Holstein (near the Danish border), they were first mentioned in writings in about 1600. The planned breeding of the breed has been practiced since 1830.                                                                                                                                                                                                                                                                                                               |
| CAGR                                                       | Groningen (Cattle) | Groningen White-headed are typically black in color with a white head and belly. However, about 5% of the population are red rather than black. The Groningen's ancestry may be traced to the Middle Ages. The Groningen originated in what is now the northern sections of the Netherlands.                                                                                                                                                                                                                                                                                 |
| CAGS                                                       | Gascon (Cattle)    | This breed is found in the region of Gascony in southwest France and is related to the Blonde d' Aquitaine and the Piedmontese.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CAGU                                                       | Guernsey (Cattle)  | The Isle of Guernsey, a tiny island in the English Channel off the coast of France, is the birthplace of the Guernsey cow. About 960 A.D., besieged by buccaneers and sea rovers, the Island came to the attention of Robert Duke of Normandy. He sent a group of militant monks to educate the natives to cultivate the soil and defend the land. The monks brought with them the best bloodlines of French cattle - Norman Brindles, also known as Alderneys, from the province of Isigny and the famous Froment du Leon breed from Brittany - and developed the Guernsey. |

| CAIH                                                              | Israeli Holstein (Cattle) | The Israeli-Holstein cow was reached with a series of crosses. Israel first took a Damascus cow and bred it with an imported Dutch bull, thus creating an F1 cross (50%). The offspring was bred with a different imported Dutch bull, creating an R2 cross (75%). This R2, when mated with an Israeli-Dutch bull, created an R2 cross (87.5%) which were bred with other Israeli-Dutch bulls producing later generations of the cross with higher percentages. These crosses were then bred with the Holstein-Friesian bulls which resulted in the typical Israeli-Holstein cow. |
| CAIM                                                              | Irish Moiled (Cattle)     | <p>This breed is usually red or roan color sided. It was formerly also found as grey, dun, black and white. The Irish Moiled is developed in northwestern Ireland and is used for both meat and milk production.</p> <p>Some sources credit establish their ancestry with the cattle brought with the Vikings. In the 8th and 9th century.</p>                                                                                                                                                                                                                                    |

| CAJE                                                       | Jersey (Cattle)         | Originated in Channel Island, Jersey and are known for the high butterfat content of its milk and the lower maintenance costs due to its lower body weight, as well as its genial disposition.                                                                                                                                                                                                                                                                                                                                          |
| CAKE                                                       | Kerry (Cattle)          | Kerry cattle are most probably the descendants of the Celtic Shorthorn, brought to Ireland as long ago as 2000 B.C. They are still found grazing in the marginal pastures of the hill districts of southwestern Ireland. Kerries were imported to the United States beginning in 1818 and the breed prospered through the early 20th century. But by the 1930's, however, it had practically disappeared from North America. Today there are few Kerries in the United States and only a few herds, based on recent imports, in Canada. |

| CALR                                                       | Lincoln Red (Cattle)    | Lincoln Red cattle have been imported into Australia from the United Kingdom since the early 1900s. The Australian Society was formed in 1971 at which time there were a limited number of purebred Lincoln Red cattle of both sexes in Australia. This nucleus has been expanded by natural mating, artificial insemination using overseas sires and the introduction of a grading-up program.                                                                                                                                         |

| CAMG                                                              | Murray Grey (Cattle)   | The Murray Grey originated in southern New South Wales, Australia. The preferred color is silver-gray although there are numerous variations in the shading of gray. The Murray Greys began to win carcass competitions in the early 1970's and have continued to dominate the steer and carcass classes at the Royal Shows in Australia. Murray Greys are one of the two breeds preferred by the Japanese for importation, due to their easy fleshing and high-quality meat production. |

| CAMR                                                       | Meuse-Rhine-Yssel (Cattle)  | This breed was developed in the southeastern sections of the Netherlands as a dual purpose breed, both milk and meat production. Producers have now concentrated on their milk production and the breed now comprises over a quarter of the Dutch cattle population. It was developed at the beginning of the twentieth century from a mixture of red and red-pied Dutch breeds and Munster cattle from Germany. Since the 1970's Red Holstein has also been used in the breeding program.               |
| CAMS                                                       | Milking Shorthorns (Cattle) | <p>One of the oldest recognized breeds in the world, Shorthorn cattle originated in Northeastern England in the Valley of the Tees River. Much of the early improvement work took place in the counties of Northumberland, Durham and York.</p> <p>The first importation of Shorthorns to the United States was in 1783, when 'Milk Breed' Shorthorns came to Virginia. These early importations, often referred to as 'Durham's', became favorites of the pioneer, furnishing meat, milk and power.</p> |

| CANR                                                       | Norwegian Red (Cattle)   | <p>This breed designation originated in 1961 when the Norwegian Red-and-White, Red Trondheim and the Red Polled Østland. Later in 1963 the Døle was also absorbed into the designation and in 1968 South and West Norwegians were added.</p> <p>Others breeds which have been said to contribute to the gene pool include Ayshires, Swedish Red-and-Whites, Friesians and Holsteins. By 1975, 98% of the Norwegian national herd belonged to this designation.</p> <p>Using the classical definition the Norwegian Red cannot be considered a breed. It is an amalgamation to develop superior strain of dual-purpose cattle. With time and selection this designation may develop into a breed but this is not the case yet</p> |

| CAPH                                                       | Polled Hereford (Cattle) | Polled Herefords were developed from the horned Hereford breed which was founded in the mid-18th century by the farmers of Hereford County, England. Among the horned Herefords an occasional calf would be born which did not develop horns. This change from parents' characteristics is known as a "mutation." These cattle soon came to be called "polled," which means naturally hornless.                                                                                                                                                                                                                                                                                                                                  |
| CAPI                                                       | Piedmontese (Cattle)     | Originated in Northwest Italy and are seen as a premium product. The herd in Piedmont numbers some 273,000 head of cattle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| CAPR                                                       | Polish Red (Cattle)        | In the 1880's, red cattle from Denmark, Germany and Sweden were used to improve the various local strains of red Polish cattle. This mixture resulted in the formations of the Polish Red breed, for which a herd book was established in 1895. Polish Red cattle are extremely robust dairy animals. They are however, rather late maturing; first calves are dropped at 3 years or later. Cows average 400-500 kg; bulls weigh from 500-550 kg. |

| CARA                                                       | Randall (Cattle)           | Originated in Sunderland Vermont and is a rare breed. Considered to be a landrace breed, descended from the local cattle common in New England in the nineteenth Century. Suited to the New England climate. They have strong maternal and survival instincts, high intelligence, and are very docile when handled regularly.                                                                                                                     |
| CARB                                                       | Red Brangus (Cattle)       | Red Brangus, produced by a mating of black Angus cows and grey Brahman bulls, got their start in the early 1930's. Cattlemen noticed that the crossbred calves from the bottom end of the herd and at the back pasture came smaller, grew faster and had more meat than the British purebreds popular at the time.                                                                                                                                |
| CARG                                                       | Red Angus (Cattle)         | Originated in Scotland, when large red English longhorn cattle were bred to native black Angus cattle to produce animals heavy enough to be used as draft animals. In the 1940s, American cattle producers started breeding reds cropped from the best Angus herds and formed their own breed, which aside from color, has the same features and benefits as black Angus                                                                          |

| CARP                                                       | Red Poll (Cattle)           | The Red Poll cattle were developed as a dual-purpose breed in their native counties in England. Breeders sought a type that would fatten readily rather than be of extreme size. A good milk flow was also considered important in selecting breeding stock in the development of the breed in its native land.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CARX                                                       | RX3 (Cattle)                | <p>One of the first of the new composite beef breeds (early 1970's) and the strictest in terms of a planned genetic program.</p> <p>I: Pure Herefords from Miles City, MT, Livestock Experiment Station female lines were crossed with pure Red and White Holstein sires from the Larry Moore Holstein Herd, Suamico, WI. This "first cross" was made under range conditions in Montana and North Dakota.</p> <p>II: The pure Red Angus sire Choctaw Chief 373 and his sons and grandsons from the pioneer Beef Cattle Co. herd, Johnston, IA, were used on the F1 female population to complete the three breed merger. The 'Chiefline' strain of Red Angus has continued to dominate the Red Angus Breed in their National Sire Evaluation.</p> <p>III: The Breed synthesis is made, the new germ pool established and now the most important step of all, the molding of the new breed. This is being done by use of tough and disciplined testing combined with intelligent and systematic selection for the traits of greatest economic importance.</p> |

| CASA                                                              | Salers (Cattle)             | The historical journey for the Salers breed was first recorded by archaeologists as depicted from ancient drawings in cave dwellings dated some 7,000 years ago. The drawings were found near Salers, a small medieval town in the center of France. These drawings and the Salers cattle of today, which are very different from all other French breeds, bear some resemblance to the ancient Egyptian red cattle.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CASB                                                              | Simbrah (Cattle)            | An experiment combining Simmental with Brahman that began in the pastures of a few dedicated cattlemen in the late 1960s has evolved logically into the breed called Simbrah.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CASC                                                              | Santa Cruz (Cattle)         | King Ranch Santa Cruz cattle represent more than seven years of intense research and development aimed at creating a more market acceptable beef animal that produced superior results as both a feeder and seed stock animal. The new cattle are a composite breed, produced by first crossing Santa Gertrudis cows with Red Angus and Gelbvieh bulls. This initial union produces 1/2 Santa Gertrudis and 1/2 Red Angus males and females; as well as 1/2 Santa Gertrudis and 1/2 Gelbvieh males and females. These half-bloods are then crossed back on each other to produce a 1/2 Santa Gertrudis, 1/4 Red Angus and 1/4 Gelbvieh composite animal, the finished product. This is King Ranch Santa Cruz, as composites are then bred to composites, fixing the characteristics desired in the cattle and demanded by today's beef market. |

| CASG                                                       | Santa Gertrudis (Cattle)       | About 1910 the King Ranch of Kingville, Texas, one of the largest ranches in the United States, became interested in the possibilities of using Brahman cattle to improve the performance of the range cattle in their area. Modern Santa Gertrudis cattle are approximately five-eighths Shorthorn and three-eighths Brahman. A deep cherry-red color has been established in the breed. The breed shows a relatively high degree of both heat and tick resistance. |
| CASH                                                       | Shorthorn or Durham (Cattle)   | Shorthorns originated on the northeast coast of England, and were brought to America in 1783 and called Durham cattle.                                                                                                                                                                                                                                                                                                                                               |

The breed is 5/8 Holstein and 3/8 Cuban Zebu.                                                                                                                                                                                                                                                                        |
| CATA                                                              | Tarentaise (Cattle)                      | We North Americans get excited about Tarentaise because to us they are a new breed, generally unrelated to existing breeds, which gives us that extra kick of hybrid vigor. Fact is, the breed was named in 1859, and the first breed congress was held in 1866. The Tarentaise herd book was founded in 1888, with major revisions being made immediately following World War II. |
| CATL                                                              | Texas Longhorn (Cattle)                  | Originated in Texas and are very hardy in dry climates. Lightly muscled, lean beef. Horns can extend 7 feet. Gentle disposition. Many colors. Very tough breed which puts on weight quickly.                                                                                                                                                                                       |

| CAWB                                                       | Welsh Black (Cattle)       | The Welsh Black is a native British Breed descended from cattle of Pre-Roman Britain in the rough mountain and hill country of Wales. Originally there were two distinct strains of Welsh Blacks, both known as a dual purpose animal; the compact sturdy North Wales type and the bigger, rangier South Wales type. The successful intermingling of these types over the past 90 years has resulted in an optimum sized animal with an emphasis on beef production. The unique traits of the breed are a result of this heredity and environment. |
| CAWG                                                       | Wagyu (Cattle)             | The word Wagyu refers to all Japanese beef cattle ('Wa' means Japanese or Japanese-style and 'gyu' means cattle). Most of the cattle were influenced by British and Continental breeds for a few generations nearly 100 years ago. Brown Swiss, Shorthorn, Devon, Simmental, Ayrshire, Korean, Holstein and Angus had been imported by 1887 and impacted today's Wagyu.                                                                                                                                                                            |

| DGOT                                                       | Other Breed (Dog)   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DGAR                                                       | Affenpinscher (Dog) | Referred to as the "Diablotin Moustachu" or the "moustached little devil" in France, the Affenpinscher is among the oldest of toy breeds. Its name offers an apt description of the breed: affen, which means monkey, and pinscher, meaning terrier. The origins of the Affenpinscher are not so clear. While Dutch painters often sketched dogs that resemble this curious breed in the 15th century, there is no proper evidence to support the breed's origin.                     |
| DGAH                                                       | Afghan Hound (Dog)  | The Afghan Hound is an ancient breed. It belonged to the Middle Eastern sight hounds, and its ancestors date back to the time of the Egyptian pharaohs. Initially, the breed was used a coursing hound by nomadic tribes to hunt for meat and hare, with the help of falcons, who swooped down at the prey. Gradually, after several generations on the mountainous lands of Afghanistan, the Afghan Hound developed into a nimble, swift dog with great stamina and leaping ability. |
| DGAU                                                       | Ainu (Dog)          | The Hokkaido, which was named after the area where it was developed, is said to have originated when Ainu migrants brought the small dog with them to Japan in the 1140s. In 1937 it was designated a protected species in Japan. In 1996 it was recognized by the UKC. Today the Hokkaido continues to be a popular hunting dog.                                                                                                                                                     |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                        |                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Code</i>                                                | <i>Name</i>            | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                            |
| DGAT                                                       | Airedale Terrier (Dog) | The Airedale or "King of Terriers" is the tallest of the terriers. Thought to have originated from the Black and Tan Terrier or English Terrier, the medium-sized Airedale was bred by hunters in Yorkshire to hunt small game such as fox and water rat. The dogs were also good at retrieving and finding birds.                                           |
| DGAA                                                       | Akita (Dog)            | Considered a "natural treasure" of Japan, its native country, the Akita was originally bred as an adaptable hunting dog in the mountainous region of Northern Japan. The Akita was saved from extinction in the 1800s, during which the Japanese made a concerted effort to save seven native dog breeds. The Akita is the largest among those seven breeds. |
| DGAL                                                       | Alaskan Husky (Dog)    | Originally, Alaskan Huskies were developed by mushers (the human dog sled racers) from the different bloodlines of native Inuit dogs. Some of the main breeds used now in developing Alaskan Huskies include the Eskimo dog, Siberian Husky, Greyhound, and German Shorthaired Pointer.                                                                      |
| DGAK                                                       | Alaskan Klee Kai (Dog) | As a newer dog breed, the Alaskan Klee Kai has a very detailed recording of its origin. In the mid-1970s an Alaskan woman named Linda Spurlin came across what looked like a small version of a Siberian Husky in Oklahoma. Immediately drawn to this unique dog, Spurlin returned to Alaska and began trying to recreate the dog into a new breed.          |
| DGAM                                                       | Alaskan Malamute (Dog) | Although the origin of the Alaskan Malamute is not clearly known, it is generally considered to be a descendant of the Mahlemut dog. An ancient Inuit tribe, the Mahlemut were the native people of Norton Sound, an inlet on the northwest coast of Alaska.                                                                                                 |
| DGAB                                                       | American Bulldog (Dog) | An older version of the Bulldog originated in England and was used as a work dog catching cattle and guarding property until it became the breed of choice in a brutal sport known as bull baiting. By the end of World War II, the breed was almost extinct; however, a few devote breeders decided to revive the American Bulldog.                         |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| DGAE                                                       | American Eskimo (Dog)                | The American Eskimo Dog (or Eskie) is almost certainly descended from various European Spitzes, including the white German Spitz, the white Keeshond, the white Pomeranian, and the Volpino Italiano (or white Italian Spitz).                                                                                                                                                                                                                                                                                                                    |
| DGAF                                                       | American Foxhound (Dog)              | Some evidence indicates hounds were first brought to America in 1650, when the Englishman Robert Brooke sailed to the Crown Colony of America with his pack of hunting dogs. These hounds would later become the basis of several strains of American Hounds. In the mid-to-late 1700s, hounds from France and England were brought in to further develop the breed. By then, the breed had gained much recognition, especially amongst the upper class and politicians; even President George Washington was known to have an American Foxhound. |
| DGAP                                                       | American Pit Bull Terrier (Dog)      | The Pit Bull's origins can be traced back to early 19th-century England, Ireland and Scotland. The canine's ancestors were the result of experimentally crossbreeding different Bulldog and Terrier breeds for the purpose of bear- and bull-baiting, a blood sport in which the dog was trained to attack until the larger animal was defeated. When baiting was banned in the 1800s, the dogs were then bred for the sport of ratting and dog fighting. European immigrants introduced the Pit Bull breed to North America.                     |
| DGAS                                                       | American Staffordshire Terrier (Dog) | A cousin to the American Pit Bull Terrier, the American Staffordshire Terrier was originally bred by crossing certain old terriers (e.g., the English Smooth Terrier) with an old variety of Bulldog. The American Staffordshire's excellent fighting ability made the breed an instant favorite for fanatics of dogfighting, a sport which became popular in the United States in the late 19th century.                                                                                                                                         |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| DGAW                                                       | American Water Spaniel (Dog) | Though nothing can be confirmed about the origins of the American Water Spaniel, it came to be recognized as a breed for the first time in the mid-western parts of the United States. It is assumed that the breed evolved from the Irish Water Spaniel and its other versions like Tweed Water Spaniels, Northern Water Spaniels, and Southern Water Spaniels. It is also believed that the English Water Spaniel and the Curly-Coated Retriever might have played a part in its development. |
| DGAN                                                       | Anatolian Shepherd (Dog)     | The origins of the Anatolian Shepherd are said to be rooted in Roman Mollosian war dogs and the Tibetan Mastiff, which arrived in Turkey over 4000 years ago. In Turkey, such dogs were used to defend livestock against predators like bears and wolves. They provided company to the nomadic shepherds and also became widespread throughout a vast region, thereby accounting for the breed's variation in color, size, and coat type.                                                       |
| DGAC                                                       | Australian Cattle (Dog)      | Australian Cattle Dogs were earlier known by the breed names Queensland Blue Heelers and Australian Heelers. They are often still referred to as Australian or Blue Heelers. Their beginnings can be traced to the 1800s, when cattle herders that had emigrated from Britain to Australia found that the sheep herding dogs they had brought with them were not adjusting to the harsher environment of the outback.                                                                           |
| DGAD                                                       | Australian Shepherd (Dog)    | The Australian Shepherd is, in fact, not Australian at all. A popular theory states that the Basques herders who immigrated to Australia in the 19th century brought their sheep and their sheepdogs, some of which were Australian Shepherd dogs, with them. Others believe the guardian breed, which is known for its versatility, originated in Turkey more than 5,000 years ago.                                                                                                            |
| DGIA                                                       | Australian Terrier (Dog)     | Among the smallest of the working terriers, the Australian is its country's national terrier. The breed -- first exhibited as the "broken-coated terrier of blackish blue sheen" -- originated in the late 19th century. Later names included Blue and Tan Terrier, the Toy, and in 1900 it was named the "Rough-Coated Terrier, Blue and Tan." Generally, the dog was known for its tan and blue colors, but early representatives also showed sandy or red coloration.                        |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| DGBJ                                                       | Basenji (Dog)            | The Basenji, or "Barkless Dog," is an ancient breed that draws its lineage to Egypt. It later became the premier pack hunter for the native tribes and Pygmies of the African Congo region, sometimes referred to as the Congo terrier or Zande Dog.                                                                                                                                                                                                                                                                       |
| DGBH                                                       | Basset Hound (Dog)       | The Basset Hound was first mentioned in 16th-century text, which spoke of badger hunting. However, people have used short-legged breeds since ancient times. When such dogs were bred successfully to create the Basset Hound is anyone's guess.                                                                                                                                                                                                                                                                           |
| DGBE                                                       | Beagle (Dog)             | The first mention of the Beagle in the United States occurred in the town records of Ipswich, Massachusetts, in 1642. Before the American Civil War, people in the South used Beagles, but these dogs did not resemble English Beagles. However, when the war was over, English Beagles were imported for crossbreeding and to develop the modern American Beagle we know today.                                                                                                                                           |
| DGBA                                                       | Bearded Collie (Dog)     | Occasionally referred to as the Highland Collie, the Mountain Collie, or simply Beardie, the Bearded Collie is one of Britain's oldest breeds. Its origins are thought to date back to the early 1600s, with a relation to the Polish Lowland Sheepdog breed. The earliest known picture of the Bearded Collie, however, was not until 1771, when a dog of similar appearance was placed in a portrait with the Duke of Buccleuch. A description of the breed was later published in an 1818 edition of Livestock Journal. |
| DGBN                                                       | Beauceron (Dog)          | The Beauceron is a superb herding breed that is very obedient and excellent at tracking. It is the biggest of the French sheepdogs and is well-known for its obedience. As for the history of the Beauceron, it is a purely French breed whose origin dates back to the late 16th century on the plains of Paris, called La Beauce.                                                                                                                                                                                        |
| DGBT                                                       | Bedlington Terrier (Dog) | The Bedlington Terrier, an extraordinary variety of the terrier group, is an English breed, originating in Northumberland's Hanny Hills. Even though the exact origin is not known, it is speculated that the late 18th century saw the development of a variety of game terriers called Rothbury Terriers. Joseph Ainsley of Bedlington Town interbred two Rothbury Terriers in 1825 and named the offspring the                                                                                                          |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                                            |                        | Bedlington Terrier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DGBM                                                       | Belgian Malinois (Dog) | Belgian Malinois dogs are more popular as police dogs than as house or show animals. In fact, demand for the breed as a police dog has surpassed the German Shepherd. Historically, all the Belgian sheepherding breeds, that were known as Chiens de Berger Belge collectively, were used as watchdogs as well as herders. With the popularity of dog shows in the 19th century, it was not very clear whether Belgium had any nationally distinguishable breed or not.                                                                                                                                      |
| DGBP                                                       | Belgian Sheepdog (Dog) | The Belgian Sheepdog, sometimes referred to as Groenendael, is known for its versatility and hard-working nature. It is one of the variations of the Belgian Shepherd (or Continental Shepherd); the others being Belgian Malinois and Belgian Tervuren. However, the Belgian Sheepdog has a longer black coat compared to the other Belgian shepherd dogs                                                                                                                                                                                                                                                    |
| DGBV                                                       | Belgian Tervuren (Dog) | Belgian Tervuren dogs are known for their versatility and are great herding dogs. Though it is only considered moderately popular, the Tervuren is the most elegant of the three Belgian sheepdog breeds: the short-haired Malinois, the wire-haired Laekenois, and the long-haired Groenendael. The origins of the Belgian Tervuren are a little vague, but many believe the breed belongs to the family of Belgian or Continental Shepherd dogs; the Tervuren, however, does have a different coat type and color to its suspected relations.                                                               |
| DGBG                                                       | Bergamasco (Dog)       | The Bergamasco's Asian sheepdog ancestors are believed to have been brought to the mountains near Milan from the Middle East by Phoenician traders before the rise of the Roman Empire. There they worked closely with their shepherds and developed into an independent herding dog. While the Bergamasco took its lead from the shepherd, it learned to identify problems and accomplish goals in whichever way seemed best, which was a challenge in the mountain valleys. It was in this way that the Bergamasco developed its high level of intelligence and its desire to work closely with its master. |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| DGBI                                                       | Bernese Mountain (Dog)        | The Bernese is famous for being the only Swiss mountain dog, or Sennenhunde, with a silky, long coat. Its true origin is often disputed, but some experts believe the dog's history dates back to the time when the Romans invaded Switzerland, when native flock-guarding dogs and Roman mastiffs were interbred. This resulted in a strong dog, which could tolerate the harsh Alpine weather and be used as a drover, herder, draft dog, common farm dog, and flock guard.                                                                                                                                                                                |
| DGBF                                                       | Bichon Frisé (Dog)            | The Bichon Frisé is descended from the Barbet (or Water Spaniel) and was originally known as "Barbichon," which was later shortened to "Bichon." The Bichon was divided into four types: Ilvanese, Bolognese, Maltese, and Tenerife. It is said that the Tenerife was the original source of the Bichon Frisé. They were bred on the Canary Island of Tenerife, where Spanish seamen used them as barter items while on their travels. In the 1300s, Italian seafarers rediscovered the little dogs on their voyages and brought them back to Europe. Soon thereafter, the dogs became a favorite among Italian nobles.                                      |
| DGBK                                                       | Black and Tan Coonhound (Dog) | Bred mainly in the Blue Ridge, Appalachian, Smokey, and Ozark Mountains, Black and Tan Coonhounds were originally used for hunting bears and raccoons in rugged terrain. It should be noted that the Black and Tan Coonhound is an American breed that was developed by crossing the black and tan Virginia Foxhound with the Bloodhound.                                                                                                                                                                                                                                                                                                                    |
| DGBR                                                       | Black Russian Terrier (Dog)   | In the mid-20th Century, the Soviets had to find the right working dog for their military. As there weren't good qualified dogs to suit their purpose, they imported mostly German breeds to their state Red Star kennels. Roy, a Giant Schnauzer born in 1947, was the most impressive import. This dog was mated with other breeds like the Moscow Water Dog, Airedale Terrier and Rottweiler. All the successful resultant crosses were black and could be differentiated from other breeds as the Black Terrier group. However, the best dogs were then inter-bred and by the late 1950s, the public could obtain the second- and third-generation dogs. |

| DGBO                                                       | Bloodhound (Dog)     | According to legend, the Bloodhound was first bred in two variations: black and white. The blacks, first developed by monks at the St. Hubert Monastery in Belgium around the 8th century, and were later imported into England by William the Conqueror during the Norman Conquest in 1066 A.D. In the 12th century, many English dignitaries began using these dogs as hunting companions, referred to as “blooded hounds,” indicating their noble breeding and pure blood. |
| DGXB                                                       | Bolognese (Dog)      | Although it is thought that the Bolognese existed some time before it gained popularity in Italy, there is no clear record before the eleventh century. This breed was named after the northern Italian city Bologna, and was a prize dog of the courts and the wealthy in Italy.                                                                                                                                                                                             |
| DGBC                                                       | Border Collie (Dog)  | While the exact origins of the Border Collie remain unknown, it is believed the breed may have developed from various sheepdogs used to protect flocks of grazing animals along the border of England and Scotland (and thus the origin of the breed's name).                                                                                                                                                                                                                 |
| DGBY                                                       | Border Terrier (Dog) | Touted as among the oldest British terriers, the Border Terrier developed near the Cheviot Hills between England and Scotland. Originally, the dog was bred to chase and kill foxes that caused trouble for farmers. The Border Terrier, which was the smallest among long-legged terriers, had to be very swift to match the horse’s pace and yet be of small size, to dig out or follow a fox into its burrow.                                                              |
| DGBZ                                                       | Borzoï (Dog)         | For several hundred years, the Russian aristocracy bred the Borzoï or "Russian Wolfhound." In the 13th century, hare hunting was a popular sport and after two or three centuries, coursing hounds were crossed with tall Russian sheepdogs and bear hounds to increase the original breed’s coat and size. This was required to hunt wolves in very cold climates.                                                                                                           |
| DGYB                                                       | Boston Terrier (Dog) | Fortunately, the origin and history of the Boston Terrier has been properly documented, which is unusual compared to other dog breeds. A true American creation, the Boston Terrier was a result of a cross between an English Bulldog and a white English Terrier, which occurred around 1870. This dog was commonly                                                                                                                                                         |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                                                            |                            | known as "Hooper's Judge," named after the man who purchased the animal, Robert C. Hooper. It is now believed all modern Boston Terriers can follow their lineage to this 30-pound male.                                                                                                                                                                                                                                                                                                                               |
| DGBU                                                       | Bouvier des Flandres (Dog) | The Bouvier des Flandres breed is known for its versatile character. The word "bouvier" means ox-herd or cowherd in French. They are popular today as show dogs and herders. They received their name from southwest Flanders where they were used by farmers for managing cattle in the farmlands. This breed was also used by farmers on the plains of northern France.                                                                                                                                              |
| DGBX                                                       | Boxer (Dog)                | In and around the 1830s, efforts were made by German hunters to form a new breed by crossing their Bullenbeisers with mastiff-like dogs for size, and with Bulldogs and terriers for tenacity. The crossbreed that was created was a hardy and agile dog with a strong grip and a streamlined body. When British law put an end to bull baiting, the Germans used the dogs mainly as butcher's dogs, taking charge of cattle in slaughter yards.                                                                       |
| DGZB                                                       | Briard (Dog)               | <p>The Briard is native to France. A superb herder, it was the official dog of the French army during World War II. And among the four sheepdog breeds of France (Pyrenean, Beauceron, and Picardy), Briards are the oldest.</p> <p>There is evidence of dogs resembling the Briard in 8th-century art work. There are also records of Briards during the 1300s.</p>                                                                                                                                                   |
| DGBW                                                       | Brittany (Dog)             | <p>Named for the French province in which it originated, the Brittany was bred to have a keen sense of smell and an ability to easily point out prey during a hunt. For this reason, this particular breed has been especially popular among poachers.</p> <p>The modern Brittany is believed to have been produced by French sportsmen who crossbred smaller land spaniels with English Setter during the mid-19th century. By 1907, the first Brittany (also known as Épagneul Breton) was registered in France.</p> |

| DGBS                                                       | Brussels Griffon (Dog) | The Brussels Griffon is a Belgian breed and its ancestors were the Griffon d'Ecurie or Stable Griffon, a Belgian street dog and the Affenpinscher. In Brussels, the breed worked as a guard of cabs, but its overconfident and comic nature attracted riders more than chasing away robbers. In the late 19th century, the dog was interbred with the Pug, a very popular breed in Holland at that time. This resulted in the smooth-coated variety or the Petit Brabançon and the brachycephalic head strain. Even though initially the smooth varieties were destroyed, people soon accepted them. |
| DGBL                                                       | Bull Terrier (Dog)     | The Bull and Terrier, a pit dog, was originally produced in the early 1800s by crossing the old English Terrier and the Bulldog. At the time, patrons of dog fighting and bull baiting -- two established forms of entertainment in Europe -- were always trying to perfect the fighting dog breeds. The early Bull Terriers ranged in size and color -- some featuring terrier-like features, while others exuded the Bulldog heritage.                                                                                                                                                             |
| DGBD                                                       | Bulldog (Dog)          | The history of the Bulldog is as unique as its distinctive face. First bred in England as a cross between the pug and the mastiff, the Bulldog's main purpose was as an entertainment dog in the sport of bull-baiting, a popular game during the Middle Ages -- from the 1200s through the mid-1800s, when it was outlawed by an act of Parliament.                                                                                                                                                                                                                                                 |
| DGBQ                                                       | Bullmastiff (Dog)      | The development of the Bullmastiff is recent compared to its ancestor, the Mastiff, which is one of the oldest breeds in Britain. As early as 1791, there were some references to the Bullmastiff and to crosses between the Bulldog and Mastiff. There is little evidence to support the crossing of the breeds at that time, though.                                                                                                                                                                                                                                                               |
| DGCT                                                       | Cairn Terrier (Dog)    | <p>The Cairn Terrier retains features of its root stock to a larger extent than others that have descended along the same lines. It belonged to a group of short-legged terriers, bred on the Scottish Isle of Skye.</p> <p>Such dogs were used to hunt otter, fox, and badger in the 15th century, and were skilled in jumping at otters from piles of stone or cairns. These dogs had several colors like gray, white, and red and were often entered into dog shows as Scotch Terriers.</p>                                                                                                       |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| DGCA                                                       | Canaan (Dog)                        | <p>There is evidence to suggest the breed developed centuries ago in Canaan, the land of the Israelites. At the time, there were referred to as the Dog of Canaan or Kelev Kanani.</p> <p>However, many of these Israeli dogs would become isolated in the Negec Desert and Sebulon Coastal Plain when the Romans drove the Israelites from their land about 2,000 years ago. On the brink of extinction, some wild Canaan Dogs were captured by local Bedoins to assist them in guarding and herding.</p> |
| DGCC                                                       | Cane Corso (Dog)                    | The Cane Corso descends from a Roman breed of dog that was once used in war. It is now one of two Italian "Mastiff" type breeds, along with the Neapolitan Mastiff, that descended from this war dog. The Cane Corso is the lighter version, and is more adept at hunting.                                                                                                                                                                                                                                 |
| DGCW                                                       | Cardigan Welsh Corgi (Dog)          | The Cardigan Welsh Corgi was among the first breeds to arrive in the British Isles from central Europe. It was brought to Cardiganshire in South Wales. The breed's origin is obscure, but extinct turn-spit dogs of England may have influenced the low-bodied and short-legged dogs that turned spits in kitchens. Originally, the Cardigan Welsh Corgis were used as family protectors and helpers in hunting, but it wasn't until later that the Corgi found its true calling.                         |
| DGCL                                                       | Catahoula Leopard (Dog)             | Although the exact origins of the Catahoula Leopard Dog are unknown, it is believed by some to be a result of chance and some mixed breeding of Native American Indian Dogs, red wolves, and dogs brought over by the Spanish. The Native American Indians in Northern Louisiana referred to this new breed as the "Wolf Dog," which was later bred with a dog brought over by the French, resulting in today's Catahoula Leopard Dog                                                                      |
| DGCK                                                       | Cavalier King Charles Spaniel (Dog) | The Cavalier King Charles Spaniel has descended from spaniel roots, as is evident from the name. "Toy" dogs in Europe were produced by crossing small spaniels and Oriental toy breeds like the Tibetan Spaniel and the Japanese Chin. Also referred to as the comforter spaniels, these Tudor lapdogs functioned as foot- and lap-warmers and were also used to drive away fleas from the bodies of their owners. As all the family members liked the toy spaniels, they became immensely                 |

| DGCB                                                       | Chesapeake Bay Retriever (Dog) | <p>Although the Chesapeake Bay Retriever was developed in the United States, it came from stock destined for England. In 1807, and the American vessel Canton rescued the crew and cargo of an English ship wrecked off the coast of Maryland. Also rescued were two Newfoundland pups and a black female named "Canton."</p> <p>These dogs were discovered to be excellent swimmers, and were later crossbred with the Bloodhound, Irish Water Spaniel, local hounds, and Newfoundlands, to create a breed that could swim in the harsh, ice-cold waters of Chesapeake Bay. This breed came to be known as the Chesapeake Bay Retriever and was used by local hunters for retrieving ducks.</p> |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| DGCH                                                       | Chihuahua (Dog)        | The history of the Chihuahua is quite controversial. According to one theory, it was originally developed in China and then brought to the Americas by Spanish traders, where it was interbred with small native dogs. Others speculate it is of South and Central American origin, descended from a small, mute dog -- the native Techichi -- which was occasionally sacrificed in Toltec religious rites. It was believed that this diminutive red dog guided the soul to the underworld after death. Thus, all Aztec families kept this dog and buried it with the deceased member of the family. (Curiously, the Toltecs and the Aztecs also fed on the Techichi.) When not used in burial rituals, however, the Aztec and Toltec priests and families took great care of the Techichis. |
| DGCN                                                       | Chinese Crested (Dog)  | It is not easy to trace the roots of the Chinese Crested Dog. The Hairless variety may have originated by genetic mutation throughout the world, but it is in Central and South America that it has been mainly preserved. As an exception, the Chinese Crested seemed to arise in Africa and it was brought to China in the 13th century. Chinese seamen probably kept the dogs on board ships, in order to sell them to local merchants. Therefore, they were distributed to South Africa, Turkey, Egypt, and even to South and Central America. However, the breed was documented in Europe in the 1800s, through paintings and photographs of the Chinese Crested type.                                                                                                                  |
| DGCP                                                       | Chinese Shar-Pei (Dog) | This breed's origin is not precisely known, although it is believed that the Chinese Shar-Pei ancestors may have come from the southern regions of China during the Han Dynasty (c. 200 B.C.). Some statues have even been discovered in this area bearing a strong resemblance to the Shar-Pei.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| DGCO                                                       | Chinook (Dog)          | The Chinook dog breed can be traced back to one ancestor — a puppy that was born into a litter of three in 1917 and that was aptly named "Chinook." Arthur Walden of Wonalancet, New Hampshire is credited with the first "Chinook." That first puppy was a combination of a Mastiff, Saint Bernard type on the father's side, and a Greenland Husky on the mother's side.                                                                                                                                                                                                                                                                                                                                                                                                                   |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Code</i>                                                | <i>Name</i>           | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DGHO                                                       | Chow Chow (Dog)       | The Chow Chow breed is thought to be 2,000 years old -- perhaps even older. Because the Chow shares certain features from the Spitz -- an ancient wolf-like breed -- it is believed the Chow is either a descendant of a Spitz ancestor or a progenitor of some Spitz breeds, but the true origin of the dog may never be known. It was, however, common in China for many centuries and may have served as a hunting, pointing or birding dog for nobles.                                                                                                        |
| DGCM                                                       | Clumber Spaniel (Dog) | The Clumber Spaniel is a breed that has a keen hunting capability. It is, however, not as popular as other spaniel breeds. The origin of the Clumber Spaniel dates back to as early as the latter part of the 16th century, eventually receiving its name during the period of the French Revolution of 1789. Legend holds that during the time of the revolution, the Duc de Noailles of France moved his kennel of spaniels to England for sanctuary, housing them at the Duke of Newcastle kennels at Clumber Park (thus the breed's name) in Nottinghamshire. |
| DGCS                                                       | Cocker Spaniel (Dog)  | The Cocker Spaniel is a very lovable and pleasing creature, which comes in two distinct breeds: the English and the American Cocker Spaniels. According to experts, the American breed originated from a large influx of English Cocker Spaniels, which were brought to America during the latter half of the 17th century (possibly on the Mayflower ship).                                                                                                                                                                                                      |
| DGCI                                                       | Collie (Dog)          | The origin of the Collie is rather obscure. One of the theories about the breed's origin is that of a stock and farm dog to the Celts, the first settlers on the British Isles. Since sheepherding and guarding are two of the oldest canine duties, the Collie's ancestors may reach far back into the history of dogs.                                                                                                                                                                                                                                          |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Code</i>                                                | <i>Name</i>                  | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DGCU                                                       | Curly-Coated Retriever (Dog) | <p>The Curly-Coated Retriever's origin has not been properly documented. Some believe this particular breed was in England during the late 1700s, acquiring its name from its distinct curly coat.</p> <p>It is said that the Curly-Coated Retriever is descended from the Old English Water Dog, the smaller Newfoundland, and the Irish Water Spaniel. The breed's curls were later introduced after the mix was crossed with the Poodle, a water retriever.</p>                                                                                                  |
| DGDA                                                       | Dachshund (Dog)              | <p>First mentioned in 18th-century dog books, the Dachshund breed was referred to as the Badger Dog, Little Burrow Dog, and Dacksel or "low crooked legged" breed. The word Dachshund is German, literally meaning "badger hound." This name was given to them because they were used for the extermination of badgers, although they were also very useful for hunting other prey, such as foxes and rabbits, because of their ability to enter burrows to catch them. Used in number, Dachshunds were also used to hunt boar.</p>                                 |
| DGDL                                                       | Dalmatian (Dog)              | <p>Although the origin of the Dalmatian's coat pattern is not known, it is one of the most interestingly patterned breeds. Paintings of dogs resembling the Dalmatian have been found throughout the centuries. One such painting, a fresco from 1360, is held in the Spanish Chapel of Santa Maria Novella in Florence, Italy.</p> <p>It is thought the ancestors of the Dalmatian may have been pointers and the spotted Great Dane. And while it did not originate in Dalmatia, a southern region in Croatia, the breed did derive its name from the region.</p> |

| DGDD                                                       | Dandie Dinmont Terrier (Dog) | <p>Although the unusual appearance of the Dandie Dinmont Terrier makes it look different, it bears the same ancestry as other terriers. The first Dandie appeared in the 18th century near the border of England and Scotland. Here, gypsies and farmers owned these terrier dogs and used them for killing badgers, otters, and foxes and for pulling.</p> <p>There was a time when they were also known as Hindlee, Catcleugh, and Pepper and Mustard terriers.</p>                                                                                                                                                                                             |
| DGDI                                                       | Dingo (Dog)                  | <p>The first Dingo was registered at the London Zoo in 1828; it was simply referred to as the Australian Dog. However, the oldest known Dingo fossil dates to around 1450 B.C. (though it is suspected to be even older). It was originally brought to the Australian continent by human settlers several thousand years ago, but once the Dingo strayed away from human control it formed complex packs.</p>                                                                                                                                                                                                                                                     |
| DGDP                                                       | Doberman Pinscher (Dog)      | <p>Louis Dobermann, a German tax collector, is credited for the creation of the Doberman Pinscher. In search of a watchful guard dog to accompany him during his rounds, Dobermann developed the Doberman Pinscher in the late 19th century by crossing the old German shorthaired shepherd and the German Pinscher. Later, the Black and Tan Manchester Terrier, Weimaraner, and Greyhound were also crossbred.</p>                                                                                                                                                                                                                                              |
| DGEC                                                       | English Cocker Spaniel (Dog) | <p>The English Cocker Spaniel belongs to the family of land spaniels that are extremely competent at hunting. The breed received the recognition of a distinctive variety only in 1936, with the formation of the English Cocker Spaniel Club of America. However, the crossing of the American and English Cockers was not encouraged by the English Cocker Spaniel Club, which resulted in the separation of the English Cocker and the American Cocker in 1946. The English Cocker Spaniel is also known as just the Cocker Spaniel. American Cockers are popular only in their homeland, but the English Cocker Spaniel is recognized all over the world.</p> |

| DGEF                                                       | English Foxhound (Dog)         | The history of the English Foxhound dates back to 16th century Great Britain, the records of which have been meticulously maintained through English stud books. And while its exact origin is not known, it is widely accepted that the hounds gained much of their reputation in the mid-1700s through the sport of fox hunting.                                                                                                                      |
| DGES                                                       | English Setter (Dog)           | The breed, according to the experts, originated in England over 400 years ago. An excellent bird dog, it was used in moorland to point the target and retrieve it. Further evidence points to the Water Spaniel, Springer Spaniel, and Spanish Pointer as the breeds used to develop the English Setter. The term English Setter, however, was used later on when Edward Laverack started breeding them in 1825.                                        |
| DGEN                                                       | English Springer Spaniel (Dog) | According to historical records, the first of the Springer Spaniels were land spaniels that evolved in the latter part of the 14th century. However, the properly-bred ones started developing in the 17th century, when the Duke of Norfolk started breeding them and named them Norfolk Spaniels. Its name was then converted to Springer Spaniel in the 18th century, and in 1902, it was recognized as a distinct breed by the English Kennel Club. |
| DGET                                                       | English Toy Spaniel (Dog)      | The early histories of the English Toy Spaniel and the Cavalier King Charles Spaniel are said to be identical. In fact, both breeds initially began as one single breed, a result of interbreeding between Oriental toy dogs and small spaniels. There is also evidence that indicates Mary I, Queen of Scotland in the mid-16th century, carried the first toy spaniels with her from France to Scotland.                                              |
| DGEM                                                       | Estrela Mountain (Dog)         | Considered one of the oldest breeds in Portugal, the Estrela Mountain Dog has been protecting flocks of sheep for many centuries. A brave and intelligent dog, shepherds depended on their ability to identify and scare off wolves and other hungry predators.                                                                                                                                                                                         |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| DGFS                                                       | Field Spaniel (Dog)         | Although it is considered an excellent hunter of medium size today, the breed went through various changes, which culminated in the modern day Field Spaniel. According to the experts, the breed was originally larger, deriving its traits from the English Water, Sussex, and Cocker Spaniels, and weighing in at over 25 pounds.                                                                                                                                                                                                                                                                                                                                                                           |
| DGFZ                                                       | Finnish Spitz (Dog)         | Originating from northern spitz dogs that roamed with early Finno-Ugrian tribes in their travels throughout Eurasia and Finland, the Finnish Spitz has a rich ancestral history. These dogs were probably watchdogs and camp followers, and then later developed into hunting dogs. As the breed was isolated until the early 19th century, it remained pure.                                                                                                                                                                                                                                                                                                                                                  |
| DGFC                                                       | Flat-Coated Retriever (Dog) | The Flat-Coated Retriever was initially created in the 19th century as a bird dog. Fishermen were also in need of a dog that could retrieve their catch from the water. As such, many began to mix Labradors, Newfoundlands and other breeds known for their ability to swim and retrieve. Later, setters and pointers were crossed with fishing dogs, producing a dog that suited their needs: the Flat-Coated Retriever.                                                                                                                                                                                                                                                                                     |
| DGFB                                                       | French Bulldog (Dog)        | As one of the popular dogs in England, the Bulldog was very common in the area surrounding Nottingham in the 1800s. Certain small Bulldogs weighed no more than 25 pounds and many lace workers took these "Toy" Bulldogs to France, where they went for work in the mid-19th century. The little Bulldogs, particularly the ones that had erect ears, fascinated the women of France. (Ironically, this same feature was not liked in England.) Dog dealers introduced many such clownish dogs to France, and thus these dogs, known as the Bouledogue Francais, created a furor in Paris. The breeders in France continued to develop the straight, bat ears, causing further annoyance to English breeders. |
| DGGP                                                       | German Pinscher (Dog)       | The German Pinscher, one of the reputed Pinscher breeds, originated from two older breeds: the German Bibarhund (from the 1200s) and the Tanner (from the 1300s). These strains were crossed with Black and Tan Terriers in the 1600s to produce the Rattenfanger, a good watchdog and versatile working ratter. This dog then became the                                                                                                                                                                                                                                                                                                                                                                      |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| DGGZ                                                       | Giant Schnauzer (Dog)       | It was in the rural areas of Wurrtemberg and Bavaria in Germany that the popular Giant Schnauzer originated. The smaller Standard Schnauzer attracted the eye of the cattlemen, who emulated the breed on a greater scale to drive cattle. They might have crossed smooth-haired, cattle-driving dogs with the Standard Schnauzer to produce a wire-haired drover. Soon crosses were made with the Great Dane, rough-haired Sheepdogs, Bouvier des Flandres, Wirehaired Pinscher, the black Poodle, and Wolf Spitz.                                                                                                                                                                                                                                                       |
| DGGI                                                       | Glen of Imaal Terrier (Dog) | The Glen of Imaal Terrier originated on the then desolate, rocky landscape of the Wicklow mountains in Ireland. In this harsh environment, the Glen served multiple purposes in its role as a working companion. The breed is first described in 1870, after its recognition at the Lisburn dog show in England. At the time, terriers from Ireland were simply referred to as Irish Terriers, no matter what type of terrier they happened to be. It would be some time before the Glen would have a name of its own.                                                                                                                                                                                                                                                    |
| DGGR                                                       | Golden Retriever (Dog)      | Lord Tweedmouth, often credited for the development of the Golden Retriever, lived along the Tweed River, north of the Scottish border, during the mid-19th century. There were already many retriever breeds used for hunting fowl and other game, but seeing further potential in the dogs, he sought to create a new breed which could combat the adverse conditions of the area.<br>To accomplish this, he crossed a Wavy-Coated Retriever with a Tweed Water Spaniel. The result was four puppies with excellent bird-hunting abilities. Later, the yellow Wavy-Coated Retriever was cross-bred with Bloodhounds, black retrievers, setters, and Tweed Spaniels. This crossbreeding produced dogs with similar characteristics but with a distinct yellow flat coat. |

| DGGO                                                       | Gordon Setter (Dog)          | The Gordon Setter is popular breed of hunting dog, which was recognized by the American Kennel Club in 1892. It happens to be the slowest and bulkiest of the setter family. There are two types of Gordon Setter: one is the show Gordon, and the other is the field-type Gordon. Robert Chapman organized a show of Gordons in 1875, showcasing them for the first time. Today, the Gordon is considered a more popular hunters than family pet.                                                                         |
| DGGD                                                       | Great Dane (Dog)             | The Great Dane is believed to be a cross between the Greyhound and Molossus, an ancient Greco-Roman war dog breed. It may have first appeared in Germany during the 1300s and used by the residents to capture wild boar and other prey.                                                                                                                                                                                                                                                                                   |
| DGGA                                                       | Great Pyrenees (Dog)         | Dating back to nearly 10,000 B.C., the Great Pyrenees breed originated from the enormous white dogs or flock guardian dogs of Asia Minor. Around 3000 B.C., when nomadic shepherds took their sheep to the Pyrenees Mountains, they also brought the flock-guarding dogs, which were the ancestors of the Great Pyrenees. Such dogs proved their prowess as livestock guardians for centuries.                                                                                                                             |
| DGGM                                                       | Greater Swiss Mountain (Dog) | Described as the largest and oldest of the four strains of Swiss Mountain Dogs, or Sennenhunde, the Greater Swiss Mountain Dog shares common ancestry with the Roman Molossian dogs or the Mastiff. The other Swiss Mountain Dogs are the Bernese, Appenzeller, and Entlebucher.                                                                                                                                                                                                                                           |
| DGGH                                                       | Greyhound (Dog)              | Greyhound-like dogs were first depicted in Greek, Egyptian, and Roman times. During the period of the Saxons, the Greyhound was a popular and established breed in Britain. Both the nobility and the common people greatly esteemed the dog. The first prototypical Greyhound was a sighthound that could run and catch game at a very fast pace. The word Greyhound might have originated from the Old English greyhound -- "Hund" the antecedent of the modern "hound" -- or from the Latin gradus, meaning high grade. |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| DGHA                                                       | Harrier (Dog)            | The Harrier gets its name from the Norman word harrier, meaning a dog or hound, making it difficult to figure out the true ancestry of the breed. However, it is speculated that the Harrier might be an older scenthound, with references going back to 13th-century England. Some think that the breed might have descended from St. Hubert and Talbot hounds, the Brachet or the French Basset. It is guessed from this ancestry, that the Harrier was a dog that could track hare by its scent at such a pace that hunters could easily follow the dog on foot.                                                                                            |
| DGHV                                                       | Havanese (Dog)           | <p>The Havanese (or the Havana Silk Dog) belongs to the Barbichon or the Bichon group of small dogs, which developed in the Mediterranean region in ancient times. Spanish traders gifted such dogs to Cuban women in order to maintain trade relationships. Wealthy Cuban families also pampered these small dogs as adorable pets.</p> <p>Once introduced to Europe, the breed was referred to as Habañeros or White Cubans. They gained the attention of fanciers as popular performing dogs and as pets of influential people. Their popularity as pets, however, declined, and many owners began using them as circus and trick dogs all over Europe.</p> |
| DGIH                                                       | Ibizan Hound (Dog)       | The Ibizan Hound and the Pharaoh Hound supposedly share the same ancestral roots; the former bears an incredible resemblance to the dogs dedicated to the jackal god Anubis, portrayed in Egyptian tombs. Ancient Phoenician sea traders might have brought the dogs to the Balearic Islands, where they in seclusion.                                                                                                                                                                                                                                                                                                                                         |
| DGIC                                                       | Icelandic Sheepdog (Dog) | This breed is Iceland's only native dog breed, spawning from the Icelandic Sheepdog's ancestors that were brought over with the Nordic people in the 9th century. Due to the harsh conditions of Iceland's climate, the dog breed developed to survive on the rough terrain and became an ideal farming dog.                                                                                                                                                                                                                                                                                                                                                   |

| DGIR                                                       | Irish Red and White Setter (Dog) | Most people are much more familiar with the Red Setter breed. However, it is believed that the Red and White Setter, which dates back to the 17th century, is actually the older of the two breeds. Near the end of the 19th century, the Red and White Setter, like many other breeds of the time, suffered in number due to the hardships of WWI in Ireland. Its numbers became so rare, in fact, that the breed was thought to be extinct.                                                     |
| DGIS                                                       | Irish Setter (Dog)               | Bred as field hunting dogs in Ireland, the Irish Setter took to pointing with great talent and enthusiasm. With a naturally strong olfactory sense, the Setter is able to sniff out marks (birds) from distances, track the location, and then silently freeze in place so the hunter can follow and bag the prey.                                                                                                                                                                                |
| DGIT                                                       | Irish Terrier (Dog)              | As the name suggests, the Irish Terrier, an old and a typical long-legged terrier breed, originated in Ireland. It is said to have descended from a wheat-colored terrier (perhaps a similar progenitor to the Soft Coated Wheaten Irish Terrier) and old Black and Tan Terrier, breeds that were found in Ireland and employed for hunting vermin, fox, and otter. As it resembles the Irish Wolfhound, many people also believe that this terrier may partly share its ancestry with the breed. |
| DGIW                                                       | Irish Water Spaniel (Dog)        | Though the Irish Water Spaniel is a great water retriever and sporting dog, today it is more popular as a pet and, to some extent, a show dog. It has a very unique appearance and is considered to be one of the oldest spaniels. This breed was became a popular show dog in the United States and Britain in the last half of the 17th century, and attained the recognition of the third most popular sport dog in the year of 1875.                                                          |
| DGIF                                                       | Irish Wolfhound (Dog)            | The Irish Wolfhound was mentioned for the first time in Rome in 391 A.D. The dog gained a great deal of reputation for its ability to fight with wild animals during sports and also for its noble stature. It is said that big dogs were transported from Greece to Ireland by 1500 B.C. The dogs' stature became more imposing in Ireland and they were offered as gifts to Rome. The breed was so famous in Ireland that many legends were spun about the dog's bravery in chasing and battle. |

| <i>Code</i>                                                | <i>Name</i>                | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| DGIG                                                       | Italian Greyhound (Dog)    | Although the Italian Greyhound has existed for several centuries, the documents of its origins have been lost, thus offering no knowledge of its source or its development. There is, however, ancient art from Greece, Turkey, and other Mediterranean countries depicting dogs resembling the Italian Greyhound, which are more than two centuries old.                                                                                                                 |
| DGJR                                                       | Jack Russell Terrier (Dog) | Reverend John Russell was a parson with a passion for fox hunting back in the 19th century. He developed a strain of fox hunting terriers from the now extinct English White Terrier, a breed that was bred to be white in color so that they could be distinguished from the quarry they were pursuing. This breed line eventually broke off into the Parson Russell Terrier and the Jack Russell Terrier.                                                               |
| DGJC                                                       | Japanese Chin (Dog)        | The Japanese Chin is closely related to the Pekingese, both of which were popular among the Chinese aristocracy and given as presents for visiting nobility on occasion. The name of the Japanese Chin may be misleading, as it is widely believed the Chin actually originated in China.                                                                                                                                                                                 |
| DGJT                                                       | Japanese Terrier (Dog)     | Many experts believe the Japanese Terrier stock was developed by mixing native type dogs with several other terriers brought over by European traders in the 18th century, including the Smooth Fox Terrier. However, it was not until 1916 in the Nada district near Kobe that the founding father of the modern breed, a male terrier named Kuro, was born. He was the result of crosses between the ancestral terriers, an English Toy Terrier and a Toy Bull Terrier. |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| DGKE                                                       | Keeshond (Dog)           | Belonging to the spitz group of dogs, the exact origin of the Keeshond has not been recorded. However, in the 18th Century, the dog functioned as a watchdog and companion in Holland. Later, the breed was called the barge dog, as it was frequently kept on small boats on the Rhine River to function as a watchdog. Fatefully, the Keeshond became involved in a political uprising in Holland, prior to the French Revolution. Cornelis (Kees) de Gyselaer, the leader of the Dutch rebellion, owned a barge dog that came to be known as Kees. The dog would be seen in so many political caricatures at the time, that it became an icon of the Dutch patriot. |
| DGKB                                                       | Kerry Beagle (Dog)       | Of all Irish Hounds, the Kerry Beagle is believed to be one of the oldest breeds. It is said that the “gadhar,” a dog written about in ancient Irish texts, is a direct ancestor of the Kerry Beagle. It was most likely introduced to Ireland during the Middle Ages with the arrival of the Celts. Although the exact history of this dog breed is under dispute, it is said that the Kerry Beagle is a descendant of the Old Southern Hounds. The Kerry Beagle was developed over time, mixed with other hound breeds, possibly to create an ideal dog for hunting.                                                                                                 |
| DGKT                                                       | Kerry Blue Terrier (Dog) | Originating in the mountainous regions of western and southern Ireland, the Kerry Blue Terrier was known as the resourceful farm dog for over a hundred years. It could hunt vermin, birds, and small game, retrieve both in water and on land, and even herd cattle and sheep. Making it rather peculiar that this versatile and striking breed was kept an Irish secret until the early 20th century.                                                                                                                                                                                                                                                                |
| DGKO                                                       | Komondor (Dog)           | The earliest records of the Komondor date back to 1555, but it is thought the breed existed long before. Its primary role was to guard flocks of sheep against predatory animals. They were so effective; in fact, that some believe it completely depleted the wolf population in Hungary.                                                                                                                                                                                                                                                                                                                                                                            |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| DGKU                                                       | Kuvasz (Dog)             | The Kuvasz is likely to have descended from giant Tibetan dogs, though it is regarded as a Hungarian breed. The name is actually Turkish, not Hungarian, and is derived from the word "kawasaz," which means "armed guard of noblemen." This is because during the Middle Ages only nobleman favored by members of the royal family had could keep these dogs.                                                                                                                                                                                                                          |
| DGLD                                                       | Labradoodle (Dog)        | The term "Labradoodle" was first used in Sir Donald Campbell's 1955 book, Into the Water Barrier, to describe his Labrador/Poodle cross. However, the Labradoodle did not truly come into the limelight until 1988, when Australian breeder Wally Conron crossed the Labrador Retriever and Standard Poodle. Conron had hoped to create a guide dog for the blind that would also be suitable for people with allergies to fur and dander.                                                                                                                                              |
| DGLR                                                       | Labrador Retriever (Dog) | The modern Labrador Retriever is the ancestral result of a popular fishing and retrieving dog from Newfoundland and Labrador, an Atlantic coastal province in Canada; as such, the Labrador carries with it some relationship to the modern Newfoundland water dog. Originally, there were two distinct types under the one classification of Newfoundland dogs: the greater and the lesser, in which size was the main dictate for differentiating the two.                                                                                                                            |
| DGLT                                                       | Lakeland Terrier (Dog)   | Farmers of the Lake District in the United Kingdom were the first to keep Lakeland Terriers, using them as well as packs of hounds to hunt foxes. The Lakeland Terrier was also successfully at chasing and exterminating vermin and otter. Despite the lack of documentation for the breed, it is believed the Lakeland Terrier shares a similar ancestry with the Bedlington, Fox, and Border Terriers.                                                                                                                                                                               |
| DGLH                                                       | Lancashire Heeler (Dog)  | The exact origin of the Lancashire Heeler is unknown, however it is generally accepted that the breed resulted as a mix between the Corgi and a black and tan terrier. Because these dogs are self-made from breeding on their own, it is unknown if there were any other dog breeds added into the making of the Lancashire Heeler? Originating in Great Britain, this dog breed was used by farmers for cattle driving. Although much smaller than the usual cattle driving dog, the Lancashire Heeler did its job by keeping the cattle moving without injuring itself or the stock. |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| DGLB                                                       | Leonberger (Dog)         | The Leonberger came about in the 1830s when Heinrich Essig, a dog breeder from Leonberg, crossed a female Landseer with a “barry” breed, which would later become the St. Bernard breed. The first dogs registered as Leonbergers were born in 1846. According to legend, they were bred to resemble the lion on the Leonberg coat-of-arms.                                                                                                                                                                                                                                                                        |
| DGLA                                                       | Lhasa Apso (Dog)         | Although the Lhasa Apso’s exact origin is unknown, it is believed to be an ancient dog breed. Once considered an integral part of Tibetan monasteries and villages, the Lhasa Apso was thought to incorporate the souls of reincarnated Buddhist Lamas after their death. The Lhasa Apso also functioned as a monastery watchdog, alerting monks of incoming visitors, and was thus named Abso Seng Kye or "Bark Lion Sentinel Dog." Some theorize the breed may have derived its Western name, Lhasa Apso, because of its goat-like coat and from the corrupted form of the Tibetan word rapso, which means goat. |
| DGLO                                                       | Lowchen (Dog)            | Admitted into the American Kennel Club's (AKC) Non-Sporting Group in 1999, the Löwchen or Little Lion Dog was also known by the name of Le Petit Chien Lion in France. It shares a common background with other dogs belonging to the Bichon family, including the Havanese, Bichon Frisé, and others.                                                                                                                                                                                                                                                                                                             |
| DGMA                                                       | Maltese (Dog)            | Reputed as one of the oldest dog breeds and the most ancient European toy breed, the Maltese has a curious history. Phoenician sailors visiting the island of Malta for trading around 1500 B.C. are credited for discovering the first Maltese dogs. From the 5th century onwards, dogs resembling the Maltese were found in Greek art. There is also evidence that the Greeks erected tombs to honor the Maltese.                                                                                                                                                                                                |
| DGMT                                                       | Manchester Terrier (Dog) | During the age of industrialization, rat killing with Whippets, Black and Tans, and other dogs was a common sport, enjoyed by the working class in English towns.<br>With this in mind, John Hulme, a dog fancier in Manchester, crossed the two breeds to create one that would be excellent in both chasing and dispatching rats. The name of Manchester Terrier, however, was disputed by many locals, as similar dogs had the same name in many parts of England. Therefore, the breed was mainly                                                                                                              |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                                                            |                              | referred to as Black and Tan Terrier until 1860. In 1923, the name for the breed became official when the Manchester Terrier Club of America was formed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DGMF                                                       | Mastiff (Dog)                | The history of the Mastiff is a bit muddled due to the confusion between this breed and the ancient Mastiff group from which it originates, but the modern Mastiff breed is of relatively recent origin. During the reign of Caesar, mastiffs were employed as gladiators and war dogs, and during the Middle Ages, they were used as hunting and guard dogs. Still later, they were used for bear baiting, bull baiting, and dog fighting. These sporting events continued to be popular even when they were deemed cruel and were banned in 1835.                                                                                                                                                                                                                                      |
| DGMB                                                       | Miniature Bull Terrier (Dog) | <p>Descending directly from the Bull Terrier, the Miniature Bull Terrier shares much of the former's background. Initially, the earliest specimens of the Bull Terrier came in a wide range of sizes, a direct result of the variations of sizes of the Bull's ancestors: the White English Terrier, Bulldog, and Black and Tan Terrier.</p> <p>The smallest of the white Bull Terriers were known as Coverwood Terriers, named after the kennel in which they were produced. There are also records that show small Bull Terriers of other colors existing, these weighing in at about four pounds. And though the tiny toy dogs were of a poorer variety -- quickly losing the interest of the population -- slightly larger dogs (or miniatures) were considered of better stock.</p> |
| DGMP                                                       | Miniature Pinscher (Dog)     | <p>Evidence supporting the origin of the Miniature Pinscher is very sparse. However, it is known that the breed is not a miniaturized version of the Doberman Pinscher. In fact, there is evidence that the Min Pin is older than its standard-sized cousin, such as a 17th-century painting of a cat-sized red dog that resembles the Min Pin.</p> <p>The Miniature Pinscher probably descended from the crossing the German Pinscher, Italian Greyhound and Dachshund.</p>                                                                                                                                                                                                                                                                                                             |

| DGMS                                                              | Miniature Schnauzer (Dog) | Developed in Germany in the late 19th century, the Miniature Schnauzer was originally bred as a small farm dog to keep the rats and vermin away. It was not only the most popular Schnauzer, but the tiniest of its class, and touted to be the only terrier that did not originate from the European Isle stock. It is also believed the Miniature Schnauzer was derived from crossbreeding Affenpinschers and Poodles with small Standard Schnauzers.                                   |
| DGNM                                                              | Neapolitan Mastiff (Dog)  | Large, muscular, and powerful dogs, in the tradition of the giant war dogs of Asia and the Middle East, have existed since ancient times. These dogs were used to guard homes, control livestock, and fight lions, elephants, and men in battle. Alexander the Great (356 to 323 B.C.) distributed some native animals in the regions he conquered and interbred some of them with shorthaired Indian dogs, resulting in the Molossus, which was the progenitor of several modern breeds. |
| DGNF                                                              | Newfoundland (Dog)        | As the name suggests, the Newfoundlander hails from the coast of Newfoundland, where it was a popular working dog, both on land and water. There are no records to support the breed's true beginnings, though it is generally assumed that the Newfoundland can be traced to the Tibetan Mastiff. Amongst its chores, the Newfie would carry heavy loads for its masters as draft and pack animals, tow lines from ship to land in choppy seas as ship dogs, and rescue errant swimmers. |
| DGNT                                                              | Norfolk Terrier (Dog)     | Though the early histories of the Norfolk Terrier and the Norwich Terrier are identical, the dogs are now recognized as two separate breeds.                                                                                                                                                                                                                                                                                                                                              |
| DGNE                                                              | Norwegian Elkhound (Dog)  | Originally, the Norwegian Elkhound was a scenthound that made use of its tracking powers to hunt large game and moose. A strange hound that closely resembles the spitz breeds of old, it also functioned as a guardian, defender, hunter, and herder since the age of the Vikings.                                                                                                                                                                                                       |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| DGNL                                                       | Norwegian Lundehund (Dog)                | Dating back to the 1500s, Norwegian Lundehunds were written about for their talent in hunting Puffin birds in Norway. This dog breed was specifically created for this task, specializing in scaling up steep, rocky cliffs and maneuvering their way into small crevices where the birds stayed.                                                                                                                                     |
| DGNW                                                       | Norwich Terrier (Dog)                    | In England, short-legged ratters have always been valued. However, during the 19th century, smaller breeds like the Norfolk and Norwich Terriers (known as CanTabs and Trumpington Terriers at the time) began to emerge; it was even popular for students of Cambridge University to own one of the small ratters.                                                                                                                   |
| DGNS                                                       | Nova Scotia Duck Tolling Retriever (Dog) | The Nova Scotia Duck Tolling Retriever dog is assumed to be the product of a cross-breeding between the red European decoy dog and farm collies, setters, retriever dogs, or spaniels. Originally bred in Yarmouth County, which is located at the southern tip of Nova Scotia, it was officially recognized by the Canadian Kennel Club in 1915.                                                                                     |
| DGOS                                                       | Old English Sheepdog (Dog)               | The origins of the Old English Sheepdog cannot be verified, but many believe it was introduced to the western part of England nearly 150 years ago. Its ancestors may have been the Russian Owcharka or the Bearded Collie. First developed for its strength and ability to protect herds and flocks from wolves, by the mid-1800s, the breed mainly functioned as a cattle or sheep driver, able to get the herd to market for sale. |
| DGOH                                                       | Otterhound (Dog)                         | Closely resembling the Petit Basset Griffon Vendéen, the Otterhound may have its roots in France. Being a very unusual member of the Hound Group, the Otterhound is a hardy scenthound, whose origin is unknown. The Otterhound may have its roots in breeds such as the Welsh Harrier, Bloodhound, Southern Hound, or a kind of water spaniel.                                                                                       |
| DGPP                                                       | Papillon (Dog)                           | The French word meaning butterfly was first applied to this breed in the 1500s, when the fashion for this elegant little dog turned from the floppy eared Spaniel style to the sprightly winged look that is still popular today. The Papillon were hugely popular amongst the upper ranks of society, and artists of the period preserved a wealth of images of the miniature                                                        |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| DGPR                                                       | Parson Russell Terrier (Dog)       | In the mid-19th Century, the Parson Russell Terrier descended from a dog known as Trump, which was owned by Devonshire's Parson John Russell. As Parson Russell was enthusiastic about foxhunting, he decided to develop terriers that could dispatch and chase foxes, while matching the speed of horses. The line he developed became very successful and finally bore his name.                                                                                                                                                                                      |
| DGPK                                                       | Pekingese (Dog)                    | To learn of the Pekingese, you must first know of the legend of the lion and the marmoset. According to folklore, in order for the lion to wed his lady-love, he begged the patron saint of the animals, Ah Chu, to reduce him to the size of a pigmy, while still retaining his great lion heart and character. It is then said that the offspring of this union was the dog of Fu Lin, or the Lion Dog of China.                                                                                                                                                      |
| DGPW                                                       | Pembroke Welsh Corgi (Dog)         | <p>Although many believe the Pembroke Welsh Corgi to be an ancient breed, outlining its origins is difficult. A book dating back to the 11th century, however, does mention a Welsh cattle dog.</p> <p>The Pembroke shares its background with the Cardigan Welsh Corgi, but this Corgi was bred separately in Pembrokeshire. As it was a hard-working dog, the Corgi occupied the farms when many early dog shows were taking place. In the 1920s many dog show owners began entering their Corgis into these competitions, and in 1926, the Cardigan Club formed.</p> |
| DGPB                                                       | Petit Basset Griffon Vendéen (Dog) | The Petit Basset Griffon Vendéen is French for "small, low, and rough-coated from Vendéen." Also known as PBGV, the dog was bred during the 1500s in Vendéen, located in western France, where the land is covered in rocks, thick brambles, and underbrush.                                                                                                                                                                                                                                                                                                            |
| DGPH                                                       | Pharaoh Hound (Dog)                | The Pharaoh Hound legitimately claims to be among the most ancient breeds that has hardly altered in the last 5,000 years. The breed bears an uncanny resemblance to the jackal god Anubis and its images are prominently features on the tombs of prominent Egyptian pharaohs. (Similar dogs were seen in ancient Greek art as well.)                                                                                                                                                                                                                                  |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                                                            |                         | ancestry. The earliest dog breed of this group was the Barbet, a type of curly-coated dog, which was seen in Hungary, France, and Russia. However, the German strain of the dog exerted maximum influence on the Poodle we know today. The German word poodle, meaning to splash or puddle, is the source for the Poodle's name and reflects its water abilities.                                                                                                                                                                                                                                          |
| DGSP                                                       | Poodle (Standard) (Dog) | The earliest ancestors of the Poodle were said to be curly-coated dogs of central Asia, but it is also identified with France. Many rough-coated water dogs are also associated with the dog's ancestry. The earliest dog breed of this group was the Barbet, a type of curly-coated dog, which was seen in Hungary, France, and Russia. However, the German strain of the dog exerted maximum influence on the Poodle we know today. The German word pudel, meaning to splash or puddle, is the source for the Poodle's name and reflects its water abilities.                                            |
| DGPT                                                       | Portuguese Water (Dog)  | The ancestors of the Portuguese Water Dog are thought to trace back to herding dogs that worked the steppes, or plains, of central Asia, near the Chinese-Russian border around 700 B.C. Experts believe that these herding dogs were introduced to Portugal by the Visigoths in the 5th century; although, there is another theory that its ancestors came to Portugal by way of the Berbers and Moors in the 8th century. The Water Dog's lineage may also be linked with the lineage with the Poodle. Both have traditionally been used as fishing companions, and share several physical similarities. |
| DGPG                                                       | Pug (Dog)               | Multum in Parvo, meaning "a lot in a little," is the official motto of the Pug and sums up its description. The Pug has had various names throughout the years, including Mopshond in Holland, Chinese or Dutch Pug in England, and Mops in Germany. But the word "pug" is thought to have come from the Latin pugnus, meaning fist and attributed to its clenched fist-like head, or from the 18th-century marmoset "pug" monkey, which purportedly appeared quite similar to the dog.                                                                                                                    |
| DGPI                                                       | Puli (Dog)              | The Magyar tribes of the eastern Urals arrived in the 9th century to occupy the central area of the Danube and mixed with the Turkish people                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                                            |                           | on the way. They carried various sheepdogs along with them, as well as the ancestor of the modern Puli. As the Tibetan Spaniel and the Puli have similar body structures, it is said that the former may have been instrumental in the latter's development.                                                                                                                                                                                                                                                          |
| DGRT                                                       | Rat Terrier (Dog)         | The Rat Terrier is an American breed created in the late 1800s from a mix of terriers brought to the U.S. by European miners. It is believed the Rat Terrier is a cross of the Smooth Fox Terrier, Manchester Terrier and a few other small dog breeds such as the Beagle and Whippet.                                                                                                                                                                                                                                |
| DGRC                                                       | Redbone Coonhound (Dog)   | The origins of the Redbone Coonhound can be traced to the late 1700s, when Scottish immigrants introduced red foxhounds (its ancestor) to the United States. Coon hunters, however, sought a breed that was faster and swifter at locating and treeing game.                                                                                                                                                                                                                                                          |
| DGRR                                                       | Rhodesian Ridgeback (Dog) | Noted as a popular hound today for its qualities of hunting, protecting, and companionship, the Rhodesian Ridgeback dates back to the 16th and 17th centuries, when European Boers came to South Africa. Along with them, they brought breeds such as the Great Dane, Mastiff, Staghound, Bloodhound, Pointer, Greyhound, and others. The settlers required a dog that could tolerate extreme temperatures, a limited supply of water, and even withstand rough bushes, while functioning as a hunting and guard dog. |
| DGRW                                                       | Rottweiler (Dog)          | The origin of the Rottweiler is not known, though many experts theorize that the breed descended from the drover dogs indigenous to ancient Rome. Described as a Mastiff-type, which was a dependable, intelligent and rugged animal, the drover dog began as a herder and was then integrated into the armies of the Roman Empire. With its ability to herd cattle, the drover dog assured the soldier's meat was kept together and readily available during long marches.                                           |
| DGSB                                                       | Saint Bernard (Dog)       | Originating from the Roman Molossian dogs, the Saint Bernard developed into the impressive life-saving dog from 1660 to 1670. During this time, the first batch of these big dogs were brought to the St. Bernard Hospice, which was a refuge center for travelers moving between                                                                                                                                                                                                                                     |

|                                                            |                  | Switzerland and Italy. Originally, the breed helped in turning spits, pulling carts, and may have acted as companions or watchdogs, but soon the monks discovered that the dogs were exceptional pathfinders in snow. A Saint Bernard would track lost travelers, lick the lost person's face, lie next to him to provide warmth, and help revive him. The dog served this prized role for more than 300 years and saved as many as 200 lives.                                                                                                                                                                                                                          |
| DGSA                                                       | Saluki (Dog)     | As evidence of the earliest Saluki can be traced to Egyptian times, several thousands of years ago, it is regarded among the ancient domestic dog breeds. Originally used by Arab nomads to run down foxes, hares, and gazelles in the desert (mostly with the help of falcons), the Saluki probably received its name during the Selucian period. (The dog is also referred to as the Tazi, Persian Greyhound, or Gazelle Hound.)                                                                                                                                                                                                                                      |
| DGSY                                                       | Samoyed (Dog)    | The Samoyed breed is named after the nomadic Samoyed group of people, who came from central Asia to northwestern Siberia. They were solely dependent on reindeer for their food, thus they had to move constantly with the herd, to ensure the reindeer had enough food for themselves. They used hardy and powerful spitz dogs for herding and protecting the reindeer from ferocious Arctic predators. These dogs were treated like family members, lived in the nomads' tents and kept the kids warm in bed. Sometimes they were helpful in hauling sledges and boats and hunting bears.                                                                             |
| DGSC                                                       | Schipperke (Dog) | <p>There are different theories regarding the Schipperke's origin. One credible theory states that this dog originally belonged to boatmen, who traversed from Brussels to Antwerp. In fact, a "schip" is a boat in the Flemish language and Schipperke means a small boatman. However, Belgian townspeople did not refer to the breed as Schipperke but as a spitz.</p> <p>The other possible theory is that the Schipperke was a dog in middle-class households and trade guilds, where it was a ratter and small watchdog. As the breed looked like a miniature Belgian Sheepdog, the name Schipperke may have been derived from "scheper," a word for shepherd.</p> |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| DGSD                                                       | Scottish Deerhound (Dog) | The Scottish Deerhound is a rare and old breed. It bears a resemblance to the Greyhound, but experts are not quite sure why. It is, however, assumed that the breed has existed as early as the 16th and 17th centuries. The nobles of that time, especially those who were avid deer hunters, were very fond of the breed. In fact, a Scottish Deerhound could not be acquired by anyone lower than the rank of earl during the Age of Chivalry.                                                                                                                                                                                                                                                                                                                          |
| DGST                                                       | Scottish Terrier (Dog)   | <p>There is a lot of confusion regarding the Scottish Terrier's background, as all terriers in Scotland are referred as Scotch or Scottish Terriers. Adding to the confusion is the fact that the modern Scottish Terrier was originally placed under the group of the Skye Terriers, denoting a family of terriers belonging to Scottish Isle of Skye.</p> <p>Irrespective of the origin, the earliest Scottish Terriers were first documented in the late 19th century, belonging to a group of hardy Highlanders whom they served as vermin hunters. The first breed standard was drafted by J.B. Morrison and later published in Vero Shaw's Illustrated Book of the Dog in 1880. John Naylor is credited with introducing the breed to the United States in 1883.</p> |
| DGSE                                                       | Sealyham Terrier (Dog)   | <p>Although there is some earlier evidence that a small, long-backed white terrier was imported to Wales in the 15th century, the Sealyham Terrier was not documented until the mid-19th century.</p> <p>The Sealyham Terrier derives its name from Sealyham, Haverfordwest, Wales, the estate of Captain John Edwardes, who worked tirelessly between 1850 and 1891 to develop a small breed that always remained alert and which was suitable for quarrying badger, fox, and otter. Although the breeds he used for creating the Sealyham remain a mystery, some believe Captain Edwardes may have used the Dandie Dinmont Terrier as a base.</p>                                                                                                                        |
| DGSS                                                       | Shetland Sheepdog (Dog)  | The Shetland Sheepdog has its roots in the herding dogs of Scotland, which were also the ancestors of the Border Collie and Collie. Some of these early Collie type dogs were very small, standing at about 18 inches tall. A mix of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                                            |                      | different breeds, which are still unknown to some extent, went into the makeup of the Sheltie. Some of the suggested breeds are the Spitz, the King Charles Spaniel and the Pomeranian, but as with any breed that is created for working in a harsh environment, and which must possess various traits that capture both assertiveness and a gentle touch, the Shetland Sheepdog came into its own over time as the ideal pups were bred further until the breed was made pure.                                                                                                                                                                           |
| DGSI                                                       | Shiba Inu (Dog)      | The ancient Shiba Inu is the smallest of the six Native Japanese breeds. Although its origin is obscure, the Shiba Inu is surely of spitz heritage, most probably used as a hunting dog in central Japan around 300 B.C. Many believe it hunted small game such as birds, but it may have also used occasionally to hunt wild boar.                                                                                                                                                                                                                                                                                                                        |
| DGSU                                                       | Shih Tzu (Dog)       | The name Shih Tzu Kou, or Shih Tzu, translates to “mini lion,” the moniker given to it in deference to its lion-like appearance. The name is likely based on the word for lion, “shishi.” The lion was highly esteemed in China for its connection with Buddhism, since it had a long tradition as guardian of the temples and palaces. The lion's strength and courage was revered, and it made its way into many of Buddha's teachings. This little dog was bred to reflect that appearance of strength, regality, and beauty, and it took the position as a practical stand in for the lion, acting as companion and guardian of the palace and temple. |
| DGSH                                                       | Siberian Husky (Dog) | The Chukchis, a semi-nomadic people of northeastern Asia, are responsible for developing the Siberian Husky. And though the breed's lineage remains a mystery, the Husky is probably of spitz stock, taking several centuries for the Chukchis to train them as sledge dogs. Famously used during the Alaskan gold rush, the Siberian Husky was an essential laborer in the Arctic regions, later emerging as the primary breed used in dog racing, a popular form of entertainment in these regions.                                                                                                                                                      |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <i>Code</i>                                                | <i>Name</i>         | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DGSR                                                       | Silky Terrier (Dog) | <p>The ancestor of the Silky Terrier, developed in Australia in the late 19th century, was the Yorkshire Terrier. Early on the Silky Terrier had an attractive tan and steel blue coloration, which was crossed with blue and tan Australian Terriers to enhance its color of the coat while retaining its robust form.</p> <p>The dogs that stemmed from these crosses were originally referred to as Australian Terriers or Yorkshire Terriers. Some breeders, however, thought they initiated the development of a different breed altogether and displayed these dogs as Silky Terriers. But by interbreeding the Silky Terriers, a true breeding strain developed. As two disparate areas in Australia were chosen for the breed's development, different breed standards were set in 1906, and again in 1909 and 1926.</p> |
| DGSK                                                       | Skye Terrier (Dog)  | <p>The Skye Terrier is one of the oldest terriers in Scotland. The purest strain of such dogs was seen on the Isle of Skye, which explains how they got their name. The breed was described for the first time in the 16th century, when its long coat made it noteworthy. There is some confusion in delineating its history as there were many breeds that were known as Skye Terrier. In 1840, the actual Skye Terrier became well-known when Queen Victoria took a fancy to the breed. Thus, the dog gained more popularity among commoners and in the higher circles of society.</p>                                                                                                                                                                                                                                        |
| DGSL                                                       | Sloughi (Dog)       | <p>The exact date and origin of the Sloughi is unknown; however, the dog breed is believed to have developed in North Africa in the thirteenth century if not earlier. One of two African Sighthound breeds, the Sloughi was used to hunt desert game such as foxes, deer, gazelles and more.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <i>Code</i>                                                | <i>Name</i>                       | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DGSF                                                       | Smooth Fox Terrier (Dog)          | <p>Though there are no documents that can establish the Smooth Fox Terrier's ancestry, the breed was already admired among dog show fanciers by the turn of the 19th century. Accompanying Foxhound packs, the Smooth Fox Terrier would dislodge foxes that tried to hide. Primarily hunters chose white dogs, as it was easy to distinguish them from the quarry, even when there was little light.</p> <p>Some experts believe the Wire and Smooth Fox Terriers shared a common background, while others insist the Smooth Fox Terriers descended from the Bull Terrier, Black and Tan Terrier, Beagle and Greyhound.</p>                                                          |
| DGSW                                                       | Soft Coated Wheaten Terrier (Dog) | <p>The Soft Coated Wheaten Terrier is one of three big Irish terriers. Bred as a versatile farm dog, it excelled at its tasks -- whether it be guarding the house (or barn) or exterminating pesky vermin -- for more than 200 years in Ireland. The Wheaten Terrier would later become an effective gundog, locating and retrieving game for hunters.</p> <p>The origin on the Wheaten Terrier's history has not been well documented, but it is said that the Kerry Blue Terrier is a direct descendant. Legend has it that when the Spanish Armada was sunk off the shores of Ireland, the blue dogs that swam ashore were welcomed by the terriers with a soft wheaten coat.</p> |
| DGSM                                                       | Spanish Mastiff (Dog)             | <p>The Spanish Mastiff is a very old breed, with records being traced to over 2,000 years ago. Mentions of the Mastiff in writing first appeared from the Iberian Peninsula, where the breed was most likely introduced by the Greeks and Phoenicians before the Roman invasion.</p>                                                                                                                                                                                                                                                                                                                                                                                                 |
| DGSO                                                       | Spinone Italiano (Dog)            | <p>The Spinone Italiano, or Italian Pointer, is one of the oldest pointing breeds. Although the exact origin of the breed is unknown, 15th- and 16th-century artwork has been discovered with images resembling the modern-day Spinone. There are those who believe the breed evolved from Celtic wirehaired dogs, while others think the Spinone dogs was probably brought to Italy by Greek traders during the Roman Empire.</p>                                                                                                                                                                                                                                                   |

| DGFF                                                       | Staffordshire Bull Terrier (Dog) | The working classes of the early 19th century were fond of the popular sport of rat-killing. In cities, bull baiting (an ancient sport) was not so popular, and those who loved rat-killing started moving their attention to dog fighting. These fanciers of the sport crossed the Black and Tan Terrier with the Bulldog to create a quick, strong, and fearless competitor for the dog pit.                                  |
| DGSZ                                                       | Standard Schnauzer (Dog)         | Of German ancestry, the Standard Schnauzer is the oldest and the original prototype of the three Schnauzer breeds: Miniature, Standard, and Giant. And although its exact year of origin is uncertain, there is evidence that Schnauzer-like dogs existed as early as the 14th century, probably the result of crossing black German Poodle and gray wolf spitz with wirehaired Pinscher stock.                                 |
| DGSX                                                       | Sussex Spaniel (Dog)             | Among the rarest of American Kennel Club breeds, the Sussex Spaniel is a land spaniel that derived its name from the county of Sussex, England. These dogs have a keen sense of smell, but are slower in their work than most spaniels. As such, they were not preferred by hunters in America, mainly because they required a breed that could hunt faster.                                                                    |
| DGSV                                                       | Swedish Vallhund (Dog)           | According to Swedish records, the Vallhund was brought over to the country at the time of the Vikings over 1,000 years ago, when they were known as the “Vikinarnas hund” or “Viking Dog.” The similarity between this dog breed and the Corgi are most likely because either the Swedish Vallhund was taken to Wales, or the Corgi was brought to Sweden. Historians believe that the Vallhund is the older of the two breeds. |
| DGTR                                                       | Thai Ridgeback (Dog)             | Ancient artifacts show that the Thai Ridgeback originated in the isolated islands of Eastern Thailand an estimated 4,000 years ago. Because this area was secluded from others, with poor transportation methods, this dog breed has remained very pure with little to no crossbreeding.                                                                                                                                        |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <i>Code</i>                                                | <i>Name</i>           | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DGTM                                                       | Tibetan Mastiff (Dog) | The origins of the Tibetan Mastiff have been lost, even though it is thought to be one of the most influential and ancient breeds. According to archaeological records, remains of massive dogs dating back to 1100 B.C. were found in China. These dogs may have moved with Genghis Khan and Attila the Hun, thereby providing original stock for the Tibetan Mastiff in Central Asia.                                                                                                                                                                                                                                                                                          |
| DGTS                                                       | Tibetan Spaniel (Dog) | The Buddhist principles of Tibet and the history of the Tibetan Spaniel are interlinked. The Lamaist variety of Buddhism considered the lion to be a significant symbol, as one supposedly followed Buddha just like a dog. These small lion-like dogs, which followed their Lamas, were said to be symbols of the holy lion and were therefore greatly valued. The Chinese cultivated the Pekingese, also a lion dog, and animals were often exchanged between China and Tibet, leading to interbreeding between their dogs. Even though breeding took place in the villages, the best animals were produced in the monasteries that normally bred just the smallest specimens. |
| DGTT                                                       | Tibetan Terrier (Dog) | Registered by the American Kennel Club in 1973, the Tibetan Terrier's history is as mysterious as the valleys and mountains where it originated. It was developed nearly two centuries ago in Lamaist monasteries. The dogs were treated as family companions and not as workers, but occasionally they helped in herding and other farm tasks. Known to be holy dogs or "luck bringers," the breed's history is regarded as a myth.                                                                                                                                                                                                                                             |
| DGTF                                                       | Toy Fox Terrier (Dog) | Pet owners and farmers have been fond of Smooth Fox Terriers for many years. The American farmer, for instance, was in search of a "runt" or smaller animal to exterminate rodents, and crossed the smaller fox terriers with toy dog breeds such as the Toy Manchester Terrier, Italian Greyhound, and Chihuahua in the early 20th century. This resulted in a smaller variety of the Smooth Fox Terrier with some notable differences -- its fiery nature was slightly mellowed, for example.                                                                                                                                                                                  |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Code</i>                                                | <i>Name</i>                  | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DKOY                                                       | Toy Manchester Terrier (Dog) | <p>The Black and Tan Terrier, one of the best-known dogs in England, was appreciated for its ability to kill rats in the 16th century. These dogs were valued both for their quality to keep homes free of vermin and for the purpose of entertainment. People also laid bets on the number of rats a dog could kill in a given amount of time. Numerous workers in Manchester, England were fond of dog-racing contests and rat-killing contests.</p> <p>In the mid-1800s, a cross between the Whippet racer and the Black and Tan Terrier resulted in a dog named the Manchester Terrier. Although the Manchester Terrier and its Black and Tan Terrier ancestors were sometimes considered to be the same breed, it wasn't until 1923 that the name Manchester Terrier was officially used.</p> <p>During its development, the Manchester was crossed with many other breeds, including the Italian Greyhound. The toy variety of the breed has existed as early as 1881.</p> |
| DGTP                                                       | Toy Poodle (Dog)             | <p>The early ancestors of the Toy Poodle were likely to be the Central Asian curly-coated dogs, even though this breed is associated with France. These ancestors helped in herding and followed their masters to various routes taking them to different parts of Europe. Many rough-coated water dogs are also said to be the ancestors of the Poodle. Poodle is derived from pudel, a German word meaning "to splash," or puddle, indicating the breed's water abilities. It was also known as chien canard in France, reflecting its duck-hunting abilities.</p>                                                                                                                                                                                                                                                                                                                                                                                                             |
| DGTH                                                       | Transylvanian Hound (Dog)    | <p>It is believed that the Transylvanian Hound originated in Hungary over 1,000 years ago when the Magyars came to the area. This dog breed is most likely a crossbreed between the hounds brought by the Magyars and native dogs of Hungary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DGVZ                                                       | Vizsla (Dog)                 | <p>Many experts believe the Vizsla descended from the hunting and companion dogs of the Magyars, a people that settled what now Hungary is more than a thousand years ago. These hunters were in search of a breed capable of pointing out game and retrieving them in thick bushes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| DGVI                                                       | Volpino Italiano (Dog)       | The Volpino Italiano is a direct descendent of Spitz-type dogs, which records show existed over 5,000 years ago. After breaking away from the Spitz breed, the Volpino Italiano became very popular in ancient Italy. This dog breed was said to be a favorite among palace lords as well as farmers, and is even rumored to be the dog of Michelangelo.                                                                                                                                                                                                                                                                                                                                                                             |
| DGWE                                                       | Weimaraner (Dog)             | Compared to other breeds' longstanding histories, the Weimaraner is rather young. Dating back to the early 19th century, the Weimaraner was bred to function as a gundog, able to hunt animals of all sizes, including large animals such as bears, wolves, and deer. They also were speedy dogs which displayed courage, intelligence, and good scenting ability. Thought to have originally descended from the Bloodhound, the modern Weimaraner is the product of selective German breeding, mixing Red Schewissunds and various pointer breeds, including the German Shorthair Pointer. In fact, early on the Weimaraner was known simply as the Weimer Pointer, a name derived from the court by which the breed was sponsored. |
| DGWS                                                       | Welsh Springer Spaniel (Dog) | An excellent hunter, the Welsh Springer Spaniel is thought to have evolved from the crossing of the Clumber and English Spaniels. But before the Welsh Springer Spaniel emerged in Wales, land spaniels were in use there. The dogs that appeared in the first dog-shows in England were English and Welsh Springer Spaniels. Their difference lay in their color, but they have proved to be great hunters as well as show-dogs.                                                                                                                                                                                                                                                                                                    |
| DGWT                                                       | Welsh Terrier (Dog)          | The Welsh Terrier is one of only two terrier breeds that originated in Wales and is said to have come down from the Black and Tan Rough Terrier, a popular breed in Britain in the 1700 and 1800s.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| DGWH                                                       | West Highland White Terrier (Dog) | The West Highland White Terrier, as well as other Scottish terriers, share similar roots and the former is a very good hunter of fox, vermin, and badger. There was a time when the Skye, Cairn, Scottish, and Westie Terriers were regarded as one breed that had some diversity. Selective breeding using qualities like coat color or type may have developed distinct varieties, which could have been maintained in isolation in different areas of the Scottish mainland and some western islands.                                                                                                                                                                                                                                                                                                          |
| DGWP                                                       | Whippet (Dog)                     | <p>The most popular of the English sighthounds, the Whippet is also hallmarked as a true racer. However, they have failed to reach the level of popularity the Greyhounds have in the field of racing. Having a keen eye, developed sense of smell, and flexible body, the Whippet can easily track its target, run it down, and deliver it safely to its master.</p> <p>Whippets are directly related to the Greyhound, and are thought to be a crossing of Greyhound and various hunting terriers. Their development is thought to have begun in earnest in the mid to late 1800s, when the demand for a breed with the abilities of a Greyhound became more pronounced. Most working class families could not afford to keep Greyhounds, however, so the smaller, less demanding Whippet filled that need.</p> |
| DGWF                                                       | Wire Fox Terrier (Dog)            | The ancestry of the Wire Fox Terrier can be traced to English hunting dogs of the mid-19th century. These dogs were skilled at jumping and dislodging game, particularly a fox that tries to seek cover. Some experts believe the Wire and Smooth Fox Terriers shared a common background, with the Wire Fox developing from the Welsh Black and Tan Terriers, but in 1984 the American Kennel Club approved separate standards for the Wire and Smooth Fox Terriers.                                                                                                                                                                                                                                                                                                                                             |

| DGWW                                                       | Wirehaired Pointing Griffon (Dog) | <p>Also known as “the supreme gundog,” the Wirehaired Pointing Griffon is a very popular breed. Although the dog has Dutch roots, most people think it is actually a French breed. It is found in low numbers but it is adored for its excellent qualities as a retriever and pointer. Its faithfulness and versatility make it even more lovable.</p> <p>Mr. Edward Korthals of Holland is often attributed to refining the modern form of Wirehaired Pointing Griffon. Hence, around the globe many also refer to the breed as the Korthals Griffon. However, the development of this breed can be traced back to the mid-1800s. (The first successful breed was the Cherville Griffon, created by crossing the pointer with the setter.)</p> |
| DGXO                                                       | Xoloitzcuintli (Xolo) (Dog)       | <p>This little dog with the complicated name dates back some 3,500 years ago, to the time of the Aztecs. Thought to have gone extinct at one point because of its rarity, the Xoloitzcuintli made a come-back in the dog breed world in the 1950s after a campaign was waged to save the breed from obscurity.</p> <p>It is believed by some archeologists that the Xolo was brought to the Americas by people who migrated from the Asian continents to [what is now] the North American and South American continents, hypothetically settling as the first residents of the continents and holding their spot as the "natives" until later Europeans arrived.</p>                                                                            |
| DGYT                                                       | Yorkshire Terrier (Dog)           | <p>Originating in England’s Yorkshire area, the Yorkshire Terrier does not resemble a ratter or a working dog, but it is a combination of both. It was believed that the Yorkie was not produced accidentally, but came to be through intentional crossbreeding of a wide range of terriers, including the Clydesdale Waterside, Paisley, Skye, Dandie Dinmont, and rough-coated Black and Tan English Terriers. Among its most important progenitors, the Waterside Terrier was a small blue-gray dog with long hair, weighing between 6 and 20 pounds (most commonly about 10 pounds). It was brought to Yorkshire by weavers who migrated from Scotland to England in the mid-19th century.</p>                                              |

| DKMI                                                       | Miniature (Donkey)          | Miniature donkeys are native to the Mediterranean islands of Sicily and Sardinia. They are identified as either Sicilian or Sardinian donkeys according to their ancestry, although the two types do not differ. They have been extensively bred with each other and with animals of unidentified ancestry in the United States to produce a distinctively American breed of donkeys, which we call the Miniature Mediterranean Donkey. |
| DKPO                                                       | Poitou (Donkey)             | The origins of the Poitou, as with many ancient breeds, is a bit vague. It is said that the donkey and the practice of mule breeding was introduced to the Poitou region of France by the Romans. The two breeds, Poitou (donkey) and Mulassier (horse) seemed to have been developed side by side for the sole purpose of producing mules of exceptional quality.                                                                      |

| FCO                                                        | Common carp, including koi (Cyprinus carpio) (Fish) | Large Old World freshwater bottom-feeding fish introduced into Europe from Asia; inhabits ponds and sluggish streams and often raised for food; introduced into United States where it has become a pest. Synonyms and Other Names: German carp, European carp, mirror carp, leather carp, koi                                                                                                                              |
| FGC                                                        | Grass carp (Ctenopharyngodon idellus) (Fish)        | The grass carp is an herbivorous, freshwater fish species of family Cyprinidae, and the only species of the genus Ctenopharyngodon. Live grass carp appear grey on the dorsal surface, greenish yellow on the sides, and yellowish white on the abdomen. It is cultivated in China for food, but was introduced in Europe and the United States for aquatic weed control.                                                   |
| FSC                                                        | Silver carp (Hypophthalmichthys molitrix) (Fish)    | A freshwater cyprinid fish (Hypophthalmichthys molitrix) that is olive to silver in color and has a ventral keel, that is noted for its habit of jumping above the water when disturbed, and that is native to eastern Asia and has been widely introduced into nonnative waters where it is often considered a pest.                                                                                                       |
| FBC                                                        | Bighead carp (Aristichthys nobilis) (Fish)          | A freshwater, cyprinid fish (Aristichthys nobilis) that has a large head and mouth, a ventral keel between the anal and pelvic fins, and a blotchy, dark-gray color and that is native to eastern Asia and has been widely introduced into nonnative waters where it is often considered a pest.                                                                                                                            |
| FCC                                                        | Crucian carp (Carassius carassius) (Fish)           | Carassius is a genus in the ray-finned fish family Cyprinidae. Most species in this genus are commonly known as crucian carps, though this term often specifically refers to C. carassius. They are broadly described as having a body of golden green or golden bronze shining color. One distinguishing characteristic is a convexly rounded fin, as opposed to goldfish (or C. gibelio) hybrids which have concave fins. |
| FGF                                                        | Goldfish (Carassius auratus) (Fish)                 | The goldfish (Carassius auratus) is a freshwater fish in the family Cyprinidae of order Cypriniformes. It is one of the most commonly kept aquarium fish. C. auratus has an elongated, stocky body. Not all have the well-known bright gold color. Wild populations vary in color from gold to olive green or even creamy white. They possess a long dorsal fin with 15 to 21 rays and a                                    |

|                                                            |                                            | hard serrate spine at the origin of the dorsal and anal fins. The lateral line is complete, with 25-31 scales in a lateral series.                                                                                                                                                                                                                                                                                                                                                      |
| FTT                                                        | Tench ( <i>Tinca tinca</i> ) (Fish)        | A cyprinid fish ( <i>Tinca tinca</i> ) native to Eurasia but introduced in the U.S. and noted for its ability to survive in poorly oxygenated waters. Tench have a stocky, carp-like shape and olive-green skin, darker above and almost golden below. The tail fin is square in shape. The other fins are distinctly rounded in shape. The mouth is rather narrow and provided at each corner with a very small barbel. Maximum size is 70 cm, though most specimens are much smaller. |
| FSF                                                        | Sheatfish ( <i>Silurus glanis</i> ) (Fish) | A large elongated catfish ( <i>Silurus glanis</i> ) of central and eastern European rivers that may attain a length of 10 feet and a weight of 400 pounds. The mouth contains lines of numerous small teeth, two long barbels on the upper jaw and four shorter barbels on the lower jaw. It has a long anal fin that extends to the caudal fin, and a small sharp dorsal fin relatively far forward.                                                                                   |

In canton Zurich only the Zurich Goat is bred (today only very little!). It is a cross between the Appenzell and the Saanen.                                                                                                                                                                                         |
| GAU                                                               | Australian (Goat)           | A feral goat in Australia now domesticated and named the Australian goat.                                                                                                                                                                                                                                                                                                                                         |
| GBA                                                               | British Alpine (Goat)       | The British Alpine was developed in Great Britain in the early 1900s. The first British Alpines arrived in Australia in 1958 and have since been graded-up using Saanen and Toggenburg does.                                                                                                                                                                                                                      |
| GBB                                                               | Black Bengal (Goat)         | This breed is found in the Bengal, Bihar and Orissa regions of northeastern India and throughout Bangladesh. They are a meat and dairy breed which are small to dwarf in stature. The Black Bengal is a prolific breed and while usually black it is also found in brown, white or gray. The breed has a short coat and ears and is bearded.                                                                      |
| GBD                                                               | Bionda dell'Adamello (Goat) | The "Bionda dell' Adamello" is a local goat from the northern Italian Region of Lombardia. This breed takes its name from the color of its hair - Bionda in Italian means Fair - and from the mountain "Adamello" which is part of the Italian Alps. They belong to the goat population called "Alpine," from which, for years, many breeds have originated, and today still live in the European Alpine regions. |
| GBF                                                               | Belgian Fawn (Goat)         | The Belgian Fawn is descended from Chamois Colored. These goats are horned, black or brown in color with a black skin. Adult males weigh on average 65 kg and females 60 kg with an average wither height of 81 cm and 71 cm respectively.                                                                                                                                                                        |

| GBO                                                               | Booted (Goat)          | The Booted Goat was earlier spread throughout the uplands of St. Gallen (Walensee, Flums, Weisstannental and Taminatal), in the canton Glarus and in the bordering regions. It belongs to the breed of mountain goats. Until at least the 1920s it was purposefully bred, but in the 1980s it became nearly extinct. It was saved at the last moment by the foundation Pro Specie Rara. The current breeding region has its concentration in eastern Switzerland, with individual breeding groups in the central and western parts of the country. |
| GBS                                                               | Brown Shorthair (Goat) | This breed originated with a native breed of un-uniform color, mostly light-brown to white, improved by crossing with German brown (Erzgebirgziege) bucks since the end of 19th century.                                                                                                                                                                                                                                                                                                                                                           |
| GBT                                                               | Beetal (Goat)          | The Beetal is a breed used for meat and milk production. Found in Punjab, Pakistan and India, the Beetal is usually red, black or pied with pendulous ears. The males have long twisting horns. The breed is similar to the Jamnapari but smaller.                                                                                                                                                                                                                                                                                                 |

| PCAD                                                       | Andalusian (Poultry – Chicken)                 | Developed initially in Spain, the breed has undergone considerable development in England and the United States.                                                                                                                                                                                                                   |
| PCAH                                                       | Appenzell Pointed Hood Hen (Poultry – Chicken) | The Pointed Hood Hen has been present in the Alps for centuries.                                                                                                                                                                                                                                                                   |
| PCAL                                                       | Aseel /Asil (Poultry – Chicken)                | The Aseel (also spelled Asil) is an ancient breed from India, originally kept for cockfighting but today kept for ornamental purposes.                                                                                                                                                                                             |
| PCAM                                                       | Ameracaunas (Poultry – Chicken)                | This breed is easily recognizable due to the fluffy feathers around its head. Ameracaunas are perhaps most known for raising blue eggs.                                                                                                                                                                                            |
| PCAN                                                       | Ancona (Poultry – Chicken)                     | Originated near the city of Ancona, Italy, from early Leghorns and other breeds. Its mixed ancestry gives it extreme hardiness and prolificacy. Anconas were originally known as Black Leghorns because of their color, which is black with evenly white-tipped feathers.                                                          |
| PCAP                                                       | Appenzell Bearded Hen (Poultry – Chicken)      | Since the middle of the 1860s Bearded Hens have been bred out of breeds of country hens in the Appenzell Forecountry.                                                                                                                                                                                                              |
| PCAR                                                       | Araucana (Poultry – Chicken)                   | Araucanas are exceptionally rare and have their origins in South America, although they were developed here in the US. Araucanas that meet the breed standard are rumpless and tufted, however they are exceptionally difficult to breed because the tufted gene can cause a high percentage of the chicks to die in their shells. |
| PCAS                                                       | Appenzeller Spithauben (Poultry – Chicken)     | The Appenzeller Spithauben is the national breed of Switzerland, noted for its very unusual forward-pointing crest and v-shaped comb.                                                                                                                                                                                              |

| <b>APHIS Characteristics – Live Animals (Breed / Variety A11)</b> |                                                    |                                                                                                                                                                                                                                                                 |

| PCAU                                                              | Australorp (Poultry – Chicken)                     | The Australorp was developed in Australia from Black Orpington stock. It is smaller than the Orpington with a trimmer appearance.                                                                                                                               |
| PCBA                                                              | Bandara (Poultry – Chicken)                        | More than six years were devoted for developing this breed of chickens in Gimmizah and Montazah Poultry Research Stations. This breed is named after "Bandara" a village that is considered a sector of El-Gimmizah Agriculture Research Center.                |
| PCBB                                                              | Belgian Bearded d'Uccle Bantam (Poultry – Chicken) | The Mille Fleur variety is the most popular breed of Belgian Bearded d'Uccles - so much so that people commonly refer to all Beglains as "Millies" or "Mille Fleurs"! The only difference between this breed and the Booted Bantams is the presence of a beard. |
| PCBC                                                              | Buttercup (Poultry – Chicken)                      | A small, spritely breed from Sicily, their chief distinguishing feature is their cup-shaped comb.                                                                                                                                                               |
| PCBE                                                              | Buckeye (Poultry – Chicken)                        | Buckeyes are a critically endangered breed worth preserving! They are the only chicken breed of the American Class to have been developed by a woman (Nettie Metcalf in -- you guessed it -- Ohio).                                                             |
| PCBJ                                                              | Baheij (Poultry – Chicken)                         | Baheij" is a breed of chickens which has been developed in Borg-El-Arab Poultry Research Station, Matrouh.                                                                                                                                                      |
| PCBO                                                              | Booted Bantam (Poultry – Chicken)                  | Booted Bantams are the same as the famous Belgian Bearded D'Uccle Bantam breed, except Booted bantams are non-bearded.                                                                                                                                          |
| PCBR                                                              | Brahma (Poultry – Chicken)                         | Brahmas are gentle giants with feathered legs and feet and profuse, fluffy feathering. Originally from India, these birds were bred for meat production, though the hens lay relatively decently and are great setters and mothers.                             |
| PCBV                                                              | Barnevelders (Poultry – Chicken)                   | Barnevelders are the most popular dual-purpose breed of Holland. The breed has recently gained a large following in England, and during 1923 seemed to increase in popularity.                                                                                  |
| PCCH                                                              | Chantecler (Poultry – Chicken)                     | Developed in Canada as a dual purpose farm chicken, they have muscular bodies, small combs (pea) and wattles and lay brown eggs.                                                                                                                                |

| PGAB                                                       | American Buff (Poultry – Goose) | The American Buff goose was developed in North America and is descended from the wild Greylag goose, which is found in Europe and Northern Asia.                                                                                                                                                                                                                                                                                                                                                                             |
| PGAF                                                       | African (Poultry – Goose)       | The African goose is a massive bird. Its heavy body, thick neck, stout bill and jaunty posture give the impression of strength and vitality. Its name is not indicative of its place of origin. Historical studies show that the African has been known by many names, and its origin has been attributed to many continents. It seems to have arrived in North America on ships that traveled around the world so its exact origin is ambiguous. It is known, however, that the African is a relative of the Chinese goose. |
| PGCH                                                       | Chinese (Poultry – Goose)       | Chinese geese are considered by many to be the most graceful and beautiful member of the goose family. They are elegant and dignified on both land and water. Sometimes referred to as "Swan Geese" because of their long and graceful necks, they descend from the wild swan goose native to Asia.                                                                                                                                                                                                                          |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                |                                                                                                                                                                                                                                                                                                     |

| <i>Code</i>                                                | <i>Name</i>                               | <i>Definition</i>                                                                                                                                                                                                                                                                                 |
| PTBB                                                       | Bronze Broad Breasted (Poultry – Turkey)  | The Bronze Broad Breasted Turkey is considered by some to be the largest and heaviest of the Turkey variety. The Bronze strain is an American origination and admitted into the American Standard of Perfection in 1874.                                                                          |
| PTBK                                                       | Black (Poultry – Turkey)                  | It is not extensively bred in America, but in Europe is considered one of the finest turkeys for table qualities, and is bred with success in Eastern England and Normandy in France.                                                                                                             |
| PTBL                                                       | Blue (Poultry – Turkey)                   | Considered a rare breed of Turkey, a heritage Turkey and admitted into the American Standard of Perfection in 1874. Past breeding is thought to be derived from the Spanish Black Turkey of USA and the Norfolk Black in England.                                                                 |
| PTBR                                                       | Bourbon Red (Poultry – Turkey)            | Considered a rare breed of Turkey, a heritage Turkey and admitted into the American Standard of Perfection in 1909. Developed in Pennsylvania and taken to Kentucky with the long rifle. This breed later was given the name Bourbon Red from its popularity from Bourbon County, Kentucky.       |
| PTBZ                                                       | Bronze (Poultry – Turkey)                 | The Bronze turkey is named for its unusual color, a shimmering green-bronze which appears metallic in the sunlight. It is found in two types, the Broad-breasted which has commercial uses, and the Unimproved (or naturally-mating), for small-scale production. Both are rare in North America. |
| PTBS                                                       | Beltsville Small White (Poultry – Turkey) | Researchers developed the new Beltsville Small White variety from a genetic foundation that included the White Holland, White Austrian, Narragansett, Bronze, and Wild Turkey.                                                                                                                    |
| PTCH                                                       | Chocolate (Poultry – Turkey)              | The history behind the Chocolate turkey is somewhat vague, but they were common in the Southern U.S. and France before the Civil War which caused a great decline in turkey breeding.                                                                                                             |

| <b>APHIS Characteristics – Live Animals (Breed / Variety A11)</b> |                                             |                                                                                                                                                                                                                                                                                                      |

| <b>Code</b>                                                       | <b>Name</b>                                 | <b>Definition</b>                                                                                                                                                                                                                                                                                    |
| PTJB                                                              | Jersey Buff Turkey (Poultry – Turkey)       | The Buff is a historic variety of the mid-Atlantic region named for the beautiful color of its feathers. Though never widespread, it was accepted by the American Poultry Association in 1874 and used in the development of the Bourbon Red variety in the late 1800s.                              |
| PTLL                                                              | Lavender/Lilac (Poultry – Turkey)           | Lilac turkeys are one of the blue color variants of turkeys, caused by interactions of several color genes. Lilac turkeys have a solid light blue colored body, a light blue or tan tail, and slate colored banding near the end of the tail feathers.                                               |
| PTMW                                                              | Midget White (Poultry – Turkey)             | The Midget White turkey was created in the early 1960s by Dr. J. Robert Smyth at the University of Massachusetts. It was developed to meet an anticipated demand for a small version of the broad breasted turkey.                                                                                   |
| PTNA                                                              | Narragansett (Poultry – Turkey)             | Considered a rare breed Turkey, a heritage Turkey and admitted into the American Standard of Perfection in 1874. This Turkey was derived from European strains and the American Wild Turkey around Narragansett, Rhode Island in the 19th century with earlier bloodlines as far back as the 1600's. |
| PTOB                                                              | Other Breed (Poultry – Turkey)              |                                                                                                                                                                                                                                                                                                      |
| PTRO                                                              | Royal Palm (Poultry – Turkey)               | Considered a rare breed of Turkey, a heritage Turkey and admitted into the American Standard of Perfection in 1977. The Royal Palm Turkey is considered to be a little smaller than other heritage turkeys and fends for itself very well.                                                           |
| PTSB                                                              | Heritage Standard Bronze (Poultry – Turkey) | Not to be mistaken for the Broad Breasted Bronze Turkey, the Heritage (Standard) Bronze Turkey has been around for most of American History. It originated by crossing the Wild Eastern Turkey with the domesticated turkeys brought over by early European Colonists.                               |
| PTSL                                                              | Slate (Poultry – Turkey)                    | The Slate turkey never attained any standing as a popular variety and is now practically extinct. The color should be an ashy blue, sometimes dotted with black. Its size should be the same as that of the Black Turkey.                                                                            |
| PTWH                                                              | White Holland (Poultry – Turkey)            | The White Holland was the most important white-feathered variety throughout most of American history. Despite this illustrious past, the white Holland is one of the rarest and most difficult to authenticate varieties today.                                                                      |

The total stock of the Even breed is nearly 550,000.                                                                                                                                                                                                                                                                                |
| RDEK                                                       | Evenk (Reindeer)       | The Evenk breed was formed by the Evenk people, or their ancestors, and is distributed everywhere this northern nationality lives. It is considered to be the oldest breed and to have been the basis for developing other breeds. Archaeological findings give evidence that deer raising for transport originated in southern Siberia, around Lake Baikal, Tuva ASSR, Altai territory, where the ancestors of the present-day Evenks dwelt. |
| RDNE                                                       | Nentsi (Reindeer)      | The Nentsi breed was developed by the Nentsi people. In the 1930's breeding work began on a large scale and considerably increased size, strength and productivity.                                                                                                                                                                                                                                                                           |

The black wool, known as Cochddu (reddish brown) was much sought-after by merchants. During the mid-19th century some breeders began to select specifically for the black fleece color and the result is the Black Welsh Mountain sheep. Flocks of the pure breed are now widely distributed throughout the United Kingdom, with flocks also in Ireland and the USA. |

The breed was developed during the late 19th century from Scottish Blackface and a Hebridean type of Old Scottish Shortwool. The breed has been largely feral since 1930.                                                                                                                                                           |
| SHBZ                                                              | Brazilian Somali (Sheep)      | The Brazilian Somali is a hair breed which originated from the Blackhead Persian crossed with local sheep. Four pairs of breeding animals were imported from the West Indies in 1939. The breed is white with a black head. Both sexes are polled and it is small framed. They are one of the fat tail breeds.                                                                                                       |
| SHCB                                                              | Campanian Barbary (Sheep)     | The Campanian Barbary is a fat-tailed breed found primarily in Campania in southern Italy. The breed is used primarily for milk and meat production. The wool quality varies from carpet to medium wool. The breed originated from Tunisian Barbary crossed with the local breed. The Campanian Barbary often has dark spots on the face and legs. The males are either horned or polled and the females are polled. |
| SHCC                                                              | Cine Capari (Sheep)           | The Cine Capari is found in Aydin Province of Turkey. The animals are white and sometimes have light brown to dark black spots on the feet and stomach. Ewes average 38kg. They are carpet wool type and are reported to be resistant to diseases.                                                                                                                                                                   |

| SHCX                                                       | Columbia (Sheep)                             | Columbia sheep were developed by the United States Department of Agriculture as a true breeding type to replace cross breeding on the range. In 1912, rams of the long wool breeds were crossed with high quality Rambouillet ewes to produce large ewes yielding more pounds of wool and more pounds of lamb. The first cross Lincoln-Rambouillet line was the most promising of all crosses.                                                                                                                                           |
| SHDA                                                       | Dala (Sheep)                                 | Found in the region surrounding Voss and Hordaland in Norway, the Dala was developed between 1860 and 1920 from Cheviot, Leicester Longwool and Old Norwegian breeds.                                                                                                                                                                                                                                                                                                                                                                    |
| SHDB                                                       | Dalesbred (Sheep)                            | The Dalesbred is found in Upper Wharfedale and Central Pennines in England. The breed originated from the Swaledale and Scottish Blackface breeds. The breed shows a black face with a distinct white mark above and on each side of the muzzle. The legs are similarly colored. They have no wool on either the face or legs. Both sexes have a round, low set of horns.                                                                                                                                                                |

| SHDL                                                       | Danish Landrace (Sheep)      | Danish Landrace, found in Jutland, originated from Danish Heath and Merino during the 18th century. In the 1900s some Leicester Longwool and Oxford Down were introduced to the breed. They are polled and white in color with a gray head. Adult males weigh on average 70 kg and females 50 kg with an average wither height of 75 cm and 70 cm respectively.                                                                                                                  |
| SHDM                                                       | Delaine Merino (Sheep)       | Over 95 percent of the Merinos are smooth or nearly smooth. Although, a few breeders specialize in producing "A" and "B" type Merinos. These are commonly referred to as "heavy types".<br><br>The "A" type Merino was developed in Vermont through selection and inbreeding. A heavy fleece producing sheep was developed. The "B" type Merino was developed principally in Ohio. It results from breeders selecting for a heavy fleece on a sheep that has a fair mutton form. |

| SHDT                                                              | Dartmoor (Sheep)          | The Dartmoor is classified as Lustre and Longwool sheep. It is a medium-sized, (approximately 60kg) hornless, deep-bodied, short-legged, with a well-woolled head and legs. The white face should be mottled or spotted with black or gray with matching feet.                                                                                                                           |
| SHDW                                                              | Devon Longwoolled (Sheep) | The Devon Longwoolled is a mutton and long-wool producing breed found in northern Devon in England. The breed is similar to the South Devon but smaller. Both sexes are polled.                                                                                                                                                                                                          |
| SHDX                                                              | Dorset (Sheep)            | The exact history of the Dorset sheep is found wanting for some positive record of origin. History does tell us that centuries ago, Spain wished to conquer England, and possibly during this time, the Merino sheep were brought into Southwest England and were crossed with the Horned Sheep of Wales, which produced a desirable all-purpose sheep which met the needs of that time. |
| SHDY                                                              | Drysdale (Sheep)          | The Drysdale is a dual-purpose breed whose wool is used mainly for carpet manufacture. It was introduced from New Zealand and there are now in excess of 60,000 Drysdales in Australia.                                                                                                                                                                                                  |

| SHHA                                                       | Han (Sheep)         | Ecological conditions also vary greatly in the agricultural areas, and so do the breed characteristics of the sheep. The Han, another type of Mongolian sheep, was developed in the semi-humid agricultural areas (Henan, Hebei, Shandong, Anhui and Jiangsu Provinces). There are two types of Han which in 1982, were claimed as two different breeds: Large-tail Han and Small-tail Han.       |
| SHHE                                                       | Hebridean (Sheep)   | The Hebridean, a sheep breed now classified as rare, originated in the islands off the western coast of Scotland.                                                                                                                                                                                                                                                                                 |
| SHHI                                                       | Hog Island (Sheep)  | About 200 years ago a flock of sheep was established on Hog Island, one of Virginia's barrier islands located off its Eastern Shore. The sheep were already native to the area and are believed to have had a substantial amount of Merino blood in them. There were occasional subsequent introductions to the population, the last being in 1953, when a Hampshire ram was taken to the island. |
| SHHK                                                       | Herik (Sheep)       | The Herik breed is found in northern Anatolia in Turkey.                                                                                                                                                                                                                                                                                                                                          |
| SHHN                                                       | Hasht Nagri (Sheep) | The Hasht Nagri is a fat tailed mutton and wool type. They are found in the Hasht Nagar tract in NWF Province of Pakistan. They are a medium size with a white body coat with the head and face either partially or completely black or tan.                                                                                                                                                      |
| SHHR                                                       | Harnai (Sheep)      | The Harnai is a fat tail, mutton/wool type breed. They are found in parts of Loralai, Quetta, Sibi and Zhob districts in Baluchistan Province. They are medium size with a white body coat with a black or tan spotted head and ears. The wool yield is 2.6 kg (medium; fiber diameter 33.4m). They have a compact body with a small fat tail, high fiber density.                                |
| SHHL                                                       | Hill Radnor (Sheep) | Found in the hills bordering Radnor, Hereford, Monmouthshire and Brecon.                                                                                                                                                                                                                                                                                                                          |

| SHHW                                                       | Herdwick (Sheep)      | The Herdwick is found in the Lake District of northwestern England, on the Fells of Westmorland and Cumberland. They are a carpet wool and meat breed. The lambs are born with black faces, legs and blue-roan fleeces which lighten in the adults. The males are horned and the females are polled or naturally hornless.                                                                                                                                                                                                         |
| SHHZ                                                       | Hazaragie (Sheep)     | The Hazaragie are found in Central Afghanistan. They are a fat-tailed meat breed with carpet quality wool. They are usually reddish-brown but individuals which are black or white with a brown belly are also seen. Both sexes are polled.                                                                                                                                                                                                                                                                                        |
| SHIC                                                       | Icelandic (Sheep)     | The modern Icelandic Sheep is a direct descendant of the sheep brought to the island by the early Viking settlers, in the ninth and tenth century. It is of the North European Short Tailed type, related to such breeds as the Finnsheep, Romanov, Shetland, Spelsau sheep and the Swedish Landrace, all of which are descendants of this type of sheep which was predominate in Scandinavia and the British Isles during 8th and 9th century. Of these the Icelandic and the Romanov are the largest, classified as medium size. |
| SHIF                                                       | Ile-de-France (Sheep) | The Ile-de-France is the product of crossing the English Leicester and the Rambouillet. Later the Mauchamp Merino was also used in the breed's development. The breed was originally known as the Dishley Merino. The breed is widespread in France and was introduced to Britain in the 1970's.                                                                                                                                                                                                                                   |
| SHIM                                                       | Istrian Milk (Sheep)  | Istrian Milk originates in Istria and Karst, in addition they are found in the regions of Gorizia in Italy. The name comes from the peninsula Istria. They are a dairy breed also kept for meat and wool production. The wool is of carpet wool quality. The Istrian Milk is of the Pramenda type and is nearly extinct. This breed now exists in two countries, Slovenia and Croatia.                                                                                                                                             |
| SHJA                                                       | Jacob (Sheep)         | The Jacob sheep is indeed a unique breed in America. Slight of build, with the narrow, lean carcass typical of some of the ancient British breeds, they are immediately noticeable due to their black and white fleeces and prominent horns. Both males and females are horned,                                                                                                                                                                                                                                                    |

|                                                            |                           | sporting two, four and occasionally six horns.                                                                                                                                                                                                                                                                            |
| SHJE                                                       | Jezerskosolcavska (Sheep) | Jezerskosolflorinavska sheep resulted from the crossbreeding of native white sheep with the Bergamasca sheep and with the Padova sheep. It resembles the Austrian Bergschaf that has a similar origin. The breed got its name after the breeding centers of Jezersko and Solflorinava.                                    |
| SHKA                                                       | Kachhi (Sheep)            | The Kachhi is a thin tailed, mutton and wool type of sheep. It is found in the Ran of Katchh, Tharparker district and adjoining desert area of Sind Province of Pakistan.                                                                                                                                                 |
| SHKD                                                       | Katahdin (Sheep)          | Katahdin sheep are a breed of hair sheep developed in the United States. The Katahdin breed originated at the Piel Farm in north central Maine where Michael Piel was an innovator and amateur geneticist who enjoyed raising livestock.                                                                                  |
| SHKH                                                       | Kerry Hill (Sheep)        | The Kerry Hill Breed is from Powys, on the English/Welsh borders, and it derives its name from the village of Kerry, near Newtown. There are records of this distinctive breed in this area dating back to 1809, and the first Flock Book was published in 1899 with 26 Members.                                          |
| SHKI                                                       | Kivircik (Sheep)          | Found in northwestern Turkey, the Kivircik is kept for milk and meat production. Their wool quality ranges from carpet to medium-wool quality. They are white with white or spotted faces, similar to the Karnobat and the Tsigai. Black and brown varieties are also found. The males are horned and the females polled. |
| SHKJ                                                       | Kajli (Sheep)             | The Kajli is a thin tailed sheep that is mutton/wool type. It is found in the Sargodha and Gujrat districts in the Punjab Province of Pakistan.                                                                                                                                                                           |
| SHKK                                                       | Karakul (Sheep)           | The Karakul may be the oldest breed of domesticated sheep. Archeological evidence indicates the existence of the Persian lambskin as early as 1400 B.C. and carvings of a distinct Karakul type have been found on ancient Babylonian temples.                                                                            |
| SHKM                                                       | Karacabey Merino (Sheep)  | Found in northwestern Anatolia in Turkey, this breed is a variety of Turkish Merino which originated from Kivircik graded up, since 1928, with German Mutton Merino. The breed has a                                                                                                                                      |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| SHKO                                                       | Kooka (Sheep)      | The Kooka is a thin tailed, mutton and wool sheep that is found in the Tharparker district and adjoining desert area of Sind Province of Pakistan.                                                                                                                                                                                                                                                                                                                                                                  |
| SHKY                                                       | Karayaka (Sheep)   | The Karayaka is found in northern Anatolia in Turkey. They are a carpet-wool breed kept also for meat and milk production. Karayaka are usually white with black eyes or black head and legs, occasionally black or brown animals are seen. The rams are usually horned and the ewes are usually polled. They are classified as a long-thin tailed breed.                                                                                                                                                           |
| SHLA                                                       | Landais (Sheep)    | There once were a great many flocks of this breed roaming the countryside in the 'Landes de Gascogne' region of France and they were important to the local economy. But by 1974, there remained only about 100 of the pure breed, threatened everywhere by the spread of pine plantations.                                                                                                                                                                                                                         |
| SHLE                                                       | Leineschaf (Sheep) | Until 1866, the “old” German Leineschaf used to comprise 17% of the total sheep population of the Kingdom of Hannover, and is nearly extinct today. Very early it was crossed with English Leicester and Cotswold to improve the meat yield and body shape. In 1906, breed characteristics were established and by 1937 the new cross-bred Leineschaf population reached more than 77,000. Its main breeding area was between Goettingen and Hannover, where the flocks grazed along the valley of the Leine river. |
| SHLH                                                       | Lohi (Sheep)       | The Lohi is found in southern Punjab in Pakistan. It is used for its carpet quality wool and meat production. The body of the breed is white and the head is usually tan, black or brown.                                                                                                                                                                                                                                                                                                                           |
| SHLI                                                       | Lincoln (Sheep)    | The present-day Lincoln is said to be the result of crossing the Leicester and the coarse native sheep of Lincolnshire.                                                                                                                                                                                                                                                                                                                                                                                             |

| SHMO                                                       | Moghani (Sheep)       | Found on the Moghan steppe of northwestern Iran the Moghani are a fat-tailed meat breed with carpet quality wool. They are usually are solid white but occasionally pale colored markings will be found in the head and feet. The rams are usually polled and the ewes are polled.                                                                                                                                                                                                                                     |
| SHMS                                                       | Masai (Sheep)         | The Masai are of the East African Fat-tailed type and are found in northern Tanzania, south central Kenya and Uganda. The breed is a hair sheep used for meat production. Masai are red-brown and occasionally pied. The males are horned or polled, females are usually polled.                                                                                                                                                                                                                                       |
| SHMU                                                       | Mouflon (Sheep)       | The mouflon ( <i>Ovis musimon</i> ) is thought to be one of the two ancestors for all modern sheep breeds. It is red-brown with a dark back-stripe, light colored saddle patch and underparts. The males are horned and the females are horned or polled. It is now rare but has been successfully introduced into central Europe, including Germany, Austria, Czech Republic, Slovak Republics, and Romania.                                                                                                          |
| SHMW                                                       | Merino Wool (Sheep)   | This is the main representative of the Merino breed in Australia and is found in extremely high number throughout NSW, Queensland, Victoria and Western Australia.                                                                                                                                                                                                                                                                                                                                                     |
| SHNC                                                       | Navajo-Churro (Sheep) | Navajo-Churro sheep are descended from the Churra, an ancient Iberian breed. Although secondary to the Merino, the Churra (later corrupted to "Churro" by American frontiersmen) was prized by the Spanish for its remarkable hardiness, adaptability and fecundity. The Churra was the very first breed of domesticated sheep in the New World. Its importation to New Spain by the Spanish dates back to the 16th century where it was used to feed and clothe the armies of the conquistadors and Spanish settlers. |
| SHNE                                                       | Nellore (Sheep)       | The Nellore are a hair sheep breed found in the northern Andhra Pradesh of India, primarily surrounding the city of Nellore. They are a meat breed of the south India hair type. They are found in three color varieties: white (Palla) white with black spots on face (Jodipi) and red-brown (Dora). The males are horned and the females are naturally hornless.                                                                                                                                                     |

| SHNF                                                       | Norwegian Fur (Sheep)         | This breed is kept for meat and for the pelt it produces. They are typically gray or white and both sexes are polled. The Norwegian Fur originated from Gotland and Old Norwegian breeds.                                                                                                                                                                                                                 |
| SHNH                                                       | Norfolk Horn (Sheep)          | The Norfolk Horn is found in Norfolk, Suffolk and Cambridge, England. It is one of the ancient "Heath" breeds now being revived in small numbers. The Norfolk Horn was used along with Southdown in the development of the Suffolk breed.                                                                                                                                                                 |
| SHNR                                                       | North Ronaldsay (Sheep)       | The North Ronaldsay breed is found in Orkney, Scotland. One of the Northern Short-tailed type, they are typically white or gray but are occasionally found in black or brown. The males are horned and the females are polled.                                                                                                                                                                            |
| SHNT                                                       | North Country Cheviot (Sheep) | North Country Cheviots are a "hill breed" of sheep. They evolved on the rugged Scotch highlands and of necessity had to thrive unattended by man and search for food on wild unimproved land.                                                                                                                                                                                                             |
| SHON                                                       | Old Norwegian (Sheep)         | The Old Norwegian is of the old Northern short-tailed breed. It is found in Selbjorn, Austevoll and Horda (Sunnhordland) in western Norway. Adult males weigh on average 43 kg and females 32 kg. This breed is thought to be the origin of the Icelandic, Faeroes and Spælsau breeds.                                                                                                                    |
| SHOR                                                       | Orkney (Sheep)                | The Orkney breed is found mainly on the Islands of North Ronaldsay and Linga Holm off the coast of Great Britain. The original flock was on the island of North Ronaldsay and the flock on Linga Holm was started in 1975. The breed has evolved to the tough conditions found in the islands. One of its most notable characteristics is its ability to exist on a diet of seaweed for most of the year. |
| SHOS                                                       | Ossimi (Sheep)                | The Ossimi is a carpet wool breed found in lower Egypt. It is white with a brown head. It will often times have a brown neck or brown spots as well. The males are usually horned as the females polled (hornless). It is a fat-tailed breed.                                                                                                                                                             |
| SHOT                                                       | Other Breed (Sheep)           |                                                                                                                                                                                                                                                                                                                                                                                                           |
| SHOX                                                       | Oxford (Sheep)                | The Oxford, or Oxford Down, originated in Oxford County England. The Oxford breed originated as the result of crossing Cotswolds and Hampshires.                                                                                                                                                                                                                                                          |

| SHPD                                                       | Perendale (Sheep)             | The Perendale was developed in New Zealand during the 1950's at Massey University by G. Perren to meet the needs of hill country farmers on developing country. It is still a very popular breed in New Zealand.                                                                                                                                                                                                            |
| SHPG                                                       | Pagliarola (Sheep)            | Abruzzo and Molise, in Italy, is where the Pagliarola sheep are found. A coarse to medium woolled breed, it is kept more for its meat production. The breed is usually colored yellowish white but is also found in reddish-black. Both sexes are polled.                                                                                                                                                                   |
| SHPI                                                       | Pag Island (Sheep)            | This breed is found in Croatia and is a tri-purpose breed similar to the Dubrovnik. They are primarily white with an occasional black individual. The males are usually horned and the females polled. They are thought to of originated from Merino crossed with Pramenka in the early 19th century.                                                                                                                       |
| SHPL                                                       | Pelibüey (Sheep)              | The Pelibüey is probably closely related to the West African, Red African, African or Africana breed of Columbia and Venezuela. It is descended from the West African Dwarf and is found in Cuba, coastal areas of Mexico and other locales in the Caribbean.                                                                                                                                                               |
| SHPN                                                       | Priangan (Sheep)              | The Priangan is found in west Java, Indonesia. The breed is used primarily for ram fighting and meat. It is a variety of the Javanese Thin-tailed. Some indication are that Africander and Merino breeding were introduced in the 19th century. They are usually black or pied; occasionally individuals will be gray or tan. Males are horned and females are polled (hornless). Individuals are often lack external ears. |
| SHPO                                                       | Poll Merino (Sheep)           | The development of the Australian Poll Merino is relatively new. Recessive poll genes are believed to have existed in the breed for many years and the infusions of hornless sheep during the development of the Merino breed in Australia also left some poll genes within normal Merino flocks.                                                                                                                           |

| <i>Code</i>                                                | <i>Name</i>              | <i>Definition</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| SHSE                                                       | Shropshire (Sheep)       | The Shropshire breed of sheep originated in the counties of Shropshire and Staffordshire in central western England. Records are not clear as to exactly how the breed was developed. Some maintain that it was formed by selecting and mating the best from the old native breeds of the two counties, while others say that it came into existence through the crossing of improved Southdowns, Leicesters and Cotswolds with the native black-faced sheep that were known as Longmynd. |
| SHSF                                                       | Suffolk (Sheep)          | The original Suffolks were the result of crossing Southdown rams on Norfolk Horned ewes. Apparently the product of this cross was a great improvement over either one of the parents. Although the Suffolk was a recognized breed as early as 1810, the flock book was not closed until much later.                                                                                                                                                                                       |
| SHSG                                                       | Spiegel (Sheep)          | The Spiegel sheep comes from Prättigau, the Bündner district and the bordering regions. It might have served as a starting breed for the purified Luzein sheep in the 17th and 18th centuries. Influences from the Austrian Spectacled sheep in the last century are suspected, when the borders for wandering herds were yet open.                                                                                                                                                       |
| SHSH                                                       | Southdown (Sheep)        | The Southdown were developed in Sussex, England during the late 1700 and early 1800s'. Documented importations were made into Pennsylvania from 1824 to 1829 from the English Flock of John Ellman. Later importations from the Jonas Webb flock were made into Pennsylvania, New York and Illinois.                                                                                                                                                                                      |
| SHSI                                                       | Santa Inês (Sheep)       | The Santa Inês is a breed of American Hair sheep found in Brazil. It is generally thought to be a cross of Morada Nova, the course-wooled Italian breed, Bergamasca, and the native coarse-wooled Crioula followed by a period of selection or evolution for absence of fleece.                                                                                                                                                                                                           |
| SHNY                                                       | Sicilian Barbary (Sheep) | Found in Sicily in southern Italy, the Sicilian Barbary was developed from the Tunisian Barbary and the Pinzirita. It is a coarse to medium wool breed kept for both milk and meat production. The Sicilian Barbary is polled and usually has dark spots on the face and legs. The breed has lop ears and stores fat at the base of the tail.                                                                                                                                             |

| SHTH                                                       | Thalli (Sheep)         | Thalli are a mutton and wool breed found in the Thal area and Multan and Muzaffargarh districts in Punjab Province of Pakistan.                                                                                                                                                                                                                                      |
| SHTJ                                                       | Tuj (Sheep)            | The Tuj is found in northeastern Turkey in the region surrounding Çildir. They are kept for their carpet wool, meat and milk. The breed is white, sometimes with dark marks around the eyes and on the feet. The males are horned and the females are polled. They are either short fat tailed or fat rumped. The breed originated from the Tushin found in Georgia. |
| SHTM                                                       | Tyrol Mountain (Sheep) | This breed is found in Tyrol of Austria and Bolzano of Italy. It is a coarse wooled breed, belonging to the Lop-eared Alpine group, which is kept for meat production. The Tyrol Mountain is similar to the Carinthian but has better wool, a white face and longer ears. The breed is also occasionally pied or black. Both sexes are polled.                       |
| SHTN                                                       | Tunis (Sheep)          | The Tunis is one of the oldest breeds indigenous to the United States. It is a medium-sized meat-type sheep characterized by creamy wool, copper-red colored faces & legs, pendulous ears, and minor fat deposits over the dock area.                                                                                                                                |
| SHTO                                                       | Tong (Sheep)           | The Tong is another breed originating from the Mongolian. It is a white, polled breed located in the high plains of northern Shaaxi Province in China (annual mean temperature of 13° C, annual precipitation 520 to 600 mm). The beautiful curls of the lamb pelt look like pearls, and a coat-lining made from it provides warmth with light weight.               |
| SHTR                                                       | Türkgeldi (Sheep)      | The Türkgeldi is found in Thrace, Turkey. They are a dairy breed also used for meat and wool production. The breed is 9/16 East Friesian and 7/16 Kivircik.                                                                                                                                                                                                          |
| SHTS                                                       | Tsurcana (Sheep)       | The Tsurcana may have descended from the wild Ovis vignei arkar. Since prehistoric times it has been domesticated in the Carpathians Mountains where it was established as a breed.                                                                                                                                                                                  |

| SHTU                                                       | Touabire (Sheep)         | The Touabire are one of the breeds of hair sheep found on the African continent. They are found primarily in southern Mauritania, northern Senegal and northern Mali. Used for both dairy and meat production, the Touabire are of the Sahel type. The breed is usually white with lop ears but pied individuals are also seen. The males are horned and the females polled. |
| SHTX                                                       | Texel (Sheep)            | The Texel originated on the Isle of Texel off the coast of The Netherlands early in the nineteenth century. The original Old Texel was probably a short-tailed variety of sheep. Limited importations of Lincoln and Leicester Longwool were crossed with this stock during the mid-1800.                                                                                    |
| SHUD                                                       | Uda (Sheep)              | Found in northern Nigeria, southern Niger, central Chad, northern Cameroon and western Sudan, the Uda is one of the hair sheep breeds of the Sahel type.                                                                                                                                                                                                                     |
| SHUJ                                                       | Ujumqin (Sheep)          | The Ujumqin, a larger version of the Mongolian, is found in Inner Mongolia, China. It has a fat tail 28 cm long by 36 cm wide in the male, and 22 cm long by 28 cm wide in the female. When dressed, the tail fat weighs 2 kg or more.                                                                                                                                       |
| SHUS                                                       | Ushant (Sheep)           | The Ushant is found in the region of Brittany in France. They are a carpet wool breed. Most animals are black in coloration with a few white individuals also occurring. It is a dwarf breed with the males being horned and the females polled (naturally hornless). The breed is rare.                                                                                     |
| SHVB                                                       | Valais Blacknose (Sheep) | The Valais Blacknose is a coarsewooled (i.e. mattress, mixed or carpet) breed from Switzerland kept primarily for meat.                                                                                                                                                                                                                                                      |
| SHVD                                                       | Vendéen (Sheep)          | The Vendéen were developed near Vendée in western France. The breed was developed using Southdown rams, imported during the late nineteenth century, on local ewes. The breed is noted for the production of high quality lamb carcasses. Their face and legs are covered with dark brown to gray hair. Both sexes are polled.                                               |

| SHWK                                                       | White Karaman (Sheep)            | Found in central Anatolia in Turkey, the White Karaman is raised for both meat and milk production. The wool is of carpet wool quality. They generally have black on the nose and occasionally around the eyes. The males are usually polled and the ewes are polled. Varieties of the White Karaman include Kangal, Karakas and Southern. The Makui breed found in Iran is similar.                                                                                                                           |
| SHWL                                                       | Walachenschaf (Sheep)            | The Walachenschaf is a highly endangered landrace sheep. There are only about 200 animals left as of Oct. 1998. Romanian shepherds brought along sheep when they migrated west during the Walach colonization and they settled in the Beskides, a range in the Carpathian Mountains. The sheep remained isolated in this Moravian mountain range from the 13th to the 16th century and developed into an independent breed. This original Walachenschaf was bred only in Slovakia, Czech, and southern Poland. |
| SHWM                                                       | Welsh Mountain (Sheep)           | Found throughout Wales.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SHWN                                                       | Wiltshire Horn (Sheep)           | The Wiltshire Horn is an ancient British breed from the Chalk Downs region of England. Reaching large numbers during the 17th and 18th centuries, they became almost extinct by the beginning of the 20th. A few dedicated breeders persevered with Wiltshires, forming a breed society in 1923. Since the 1970's interest in their unique qualities has increased and by 1982 there were 45 pedigreed flocks in England.                                                                                      |
| SHWR                                                       | Whiteface Dartmoor (Sheep)       | British Sheep Breeds (poster), British Wool Marketing Board, Oak Mills, Station Rd., Clayton, Bradford.                                                                                                                                                                                                                                                                                                                                                                                                        |
| SHWS                                                       | Welsh Hill Speckled Face (Sheep) | The Welsh Hill Speckled Face is a derivative of Welsh Mountain with some sources indicating that Kerry Hill breeding was also introduced at some point. The breed originated in the Devil's Bridge and hill areas of Mid Wales.                                                                                                                                                                                                                                                                                |
| SHWW                                                       | Whiteface Woodland (Sheep)       | The Whitefaced Woodland originated in the South Pennines of England. It is also known as Penistone after the Yorkshire town where                                                                                                                                                                                                                                                                                                                                                                              |

| APHIS Characteristics – Live Animals (Breed / Variety A11) |                                    |                                                                                                                                                                                                                                                                                                                                                            |

|                                                            |                                    | sheep sales have been held since 1699. It is thought to be closely related to the Swaledale and the Lonk.                                                                                                                                                                                                                                                  |
| SHWZ                                                       | Waziri (Sheep)                     | The Waziri is a fat tailed mutton/wool type. They are found in the Waziristan area and Bannu district in NWF Province in Pakistan. They are a medium size with a white body coat with a black or black spotted head. The wool yield is 1.5 kg (fine; fiber diameter 32.9m). They have a muscular body, small ears and a heavy fat tail reaching the hocks. |
| SHXA                                                       | Xalda (Sheep)                      | The Xalda (ALVAREZ SEVILLA et al.1982) is an endangered sheep breed mainly located in Asturias (Northern Spain). This breed has a marked cultural and aesthetic importance. The Xalda sheep may be included within the Celtic sheep breeds like the French Ouessant and the British Black Welsh and Morite.                                                |
| SHXB                                                       | Swiss Black-Brown Mountain (Sheep) | The Swiss Black-Brown Mountain originates from the ancient Swiss breeds Jura, Simmentaler, Saanen, Frutiger, Roux de Bagnes and Freiburger. Frutig sheep are already known from records of the 14th Century.                                                                                                                                               |
| SHXD                                                       | Swaledale (Sheep)                  | Found in the northern counties of England on the Pennines.                                                                                                                                                                                                                                                                                                 |
| SHXF                                                       | Xinjiang Finewool (Sheep)          | The Xinjiang Finewool has been developed in China since 1935 using Kazakh Fat-rumped and Mongolian females with Novocaucasian Merino and Précoce males.                                                                                                                                                                                                    |
| SHXK                                                       | Sumavska (Sheep)                   | A native rustic breed, the Sumavska has been systematically bred and improved since 1951. Recognized in 1986, in 1987 included into the World genetic resources pool. The breed is dispersed mainly in the southern and western mountain regions, named Sumava. It participated in formation of the Bavarian forest sheep (Bayerische Waldschaf)           |
| SHXM                                                       | Strong Wool Merino (Sheep)         | This strain is most prominent in western NSW, South Australia and Western Australia. In fact, in South Australia the strong-wool south Australian strain of Merino comprise more than 85 percent of the state's sheep number. The strong-wool Merino has adapted itself particularly well to the hot, dry, semi-arid areas of Australia.                   |
| SHXS                                                       | Steinschaf (Sheep)                 | The Steinschaf is a direct descendent of the now extinct Zaupelschaf. It had developed                                                                                                                                                                                                                                                                     |

| SWAI                                                       | Arapawa Island (Swine)    | The true origin of the feral pigs of Arapawa Island in the Marlborough Sounds is not known although they have given rise to much speculation. It has been suggested that they are descendants of animals released in the Marlborough Sounds area by James Cook in 1773 and 1777. A more likely explanation, however, is that they were introduced by whalers during the first half of the nineteenth century |
| SWAL                                                       | American Landrace (Swine) | Descended from Danish Landrace specimens, first brought to the United States in 1934. These large pigs are white and have an elongated body with a less-pronounced back arch than other breeds.                                                                                                                                                                                                              |

It is a rare breed of domestic pig in Germany.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SWBG                                                              | Belgian Landrace (Swine)              | The breed's development began in the late 1920's, with the native Landrace type, which was described as "a short, fat and poorly muscled pig." In the early 1930's, the German Landrace was introduced and crossed with the native stock. The German stock that was introduced was said to have had an infusion of British Large White. Following World War II, Dutch Landrace were imported and used. These were said to have carried recent introductions of Danish pig "blood". The selection and genetic improvement program that followed resulted in a breed that had fairly good fertility, strong constitutions and more satisfactory rates of growth and feed conversion. |
| SWBK                                                              | Berkshire (Swine)                     | Originally sandy in color, but are now black with white spots. These pigs have short, perky ears and white stockings on their feet. This medium-sized breed is considered quite hardy and is often used as the sire in crossbreeding. Berkshires grow quickly and efficiently and produce large litters.                                                                                                                                                                                                                                                                                                                                                                           |
| SWBL                                                              | British Lop (Swine)                   | The British Lop is a west country breed which originated around the Tavistock area either side of the Cornwall/Devon borders                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Import Exemption Codes

| <i>Code</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                   |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 123.4a1     | Temporary import of U.S. – origin defense items for servicing, inspection, testing, calibration, repair, overhaul, reconditioning, or one-to-one replacement of defective items.                                                                                                                                                                                                     |
| 123.4a2     | Temporary import of U.S. – origin defense item to be enhanced, upgraded, or incorporated into another item for which the permanent export has been authorized by Directorate of Defense Controls.                                                                                                                                                                                    |
| 123.4a3     | Temporary import of U.S. – origin defense items for exhibition, demonstration or marketing.                                                                                                                                                                                                                                                                                          |
| 123.4a4     | Temporary import of U.S. – origin defense items which have been rejected for permanent import by Department of Treasury.                                                                                                                                                                                                                                                             |
| 123.4a5     | Temporary import of U.S. – origin defense items approved for import under Foreign Military Sales Program.                                                                                                                                                                                                                                                                            |
| 123.4b      | Temporary import but not subsequent export of item incorporated into another article or modified and enhanced.                                                                                                                                                                                                                                                                       |
| 123.6       | From the United States to foreign trade zones in the United States or Customs bonded warehouse.                                                                                                                                                                                                                                                                                      |
| 123.12      | Shipments between U.S. possessions.                                                                                                                                                                                                                                                                                                                                                  |
| 123.13      | Defense article on domestic air shipment via foreign country.                                                                                                                                                                                                                                                                                                                        |
| 123.19      | Canadian and Mexican border shipments.                                                                                                                                                                                                                                                                                                                                               |
| 123.23      | Shipments when the total value does not exceed the value on the license by more than ten percent.                                                                                                                                                                                                                                                                                    |
| 126.2       | The DAS for DTC may order the temporary suspension or modification of any or all of the regulations in the interest of the security and foreign policy of the United States.                                                                                                                                                                                                         |
| 126.3       | Exceptional or undue hardship, or otherwise in the interest of the U.S. Government.                                                                                                                                                                                                                                                                                                  |
| 126.4a1     | 22 CFR 126.4(a)(1) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency or employee of U.S. Government when acting in an official capacity; or by persons in a contractual relationship with an agency of U.S. Government to conduct contracted-for activities within the scope of the contractual relationship. |
| 126.4a2     | 22 CFR 126.4(a)(2) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency of U.S. Government for carrying out a cooperative project, program, or other activity in furtherance of an agreement or arrangement.                                                                                                     |
| 126.4a3     | 22 CFR 126.4(a)(3) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency of U.S. Government for carrying out any foreign assistance or sales program authorized by law and subject to control by the President by other means.                                                                                    |
| 126.4a4     | 22 CFR 126.4(a)(4) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by agency of U.S. Government for any other security cooperation programs and activities of the Department of Defense authorized by law and subject to control by the President by other means.                                                        |
| 126.4b1     | 22 CFR 126.4(b)(1) Export, Re-export, Re-Transfer or Temporary Import of defense article, technical data, or defense service when made by another person for an agency of the U.S. Government to an agency of the U.S. Government at its request.                                                                                                                                    |

| <i>Code</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 126.4b2     | 22 CFR 126.4(b)(2) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services when made by another person for an agency of the U.S. Government to an entity other than the U.S. Government at the written direction of the U.S. Government for an activity authorized for that agency in paragraphs (a)(1) through (a)(4) of this section. |
| 126.4c1     | 22 CFR 126.4(c) For the return to the United States of defense articles, technical data, or defense services exported pursuant to 126.4(a)(1)-(4) or 126.4(b)(1)-(2) and to the U.S. Government.                                                                                                                                                                                            |
| 126.4c2     | 22 CFR 126.4(c) For the return to the United States of defense articles, technical data, or defense services exported pursuant to 126.4(a)(1)-(4) or 126.4(b)(1)-(2) and to the person who exported the item.                                                                                                                                                                               |
| 126.5a      | Temporary import and return to Canada of unclassified defense articles originating from Canada.                                                                                                                                                                                                                                                                                             |
| 126.6b      | Temporary imports of foreign military aircraft or foreign naval vessels if no overhaul, repair, or modification of the aircraft or naval vessel is to be performed.                                                                                                                                                                                                                         |
| 126.6c      | Defense article, technical data, or defense service sold, leased, or loaned by Department of Defense under Foreign Military Sales Program.                                                                                                                                                                                                                                                  |
| 126.16e1    | United States and Australian combined military or counter-terrorism operations.                                                                                                                                                                                                                                                                                                             |
| 126.16e2    | United States and Australian cooperative security and defense research, development, production, and support programs.                                                                                                                                                                                                                                                                      |
| 126.16e3    | Mutually determined specific security and defense projects where the Government of Australia is the end-user.                                                                                                                                                                                                                                                                               |
| 126.16e4    | Defense Trade Cooperation Treaty between United States and Australia for U.S. Government end-use.                                                                                                                                                                                                                                                                                           |
| 126.17e1    | United States and United Kingdom combined military or counter-terrorism operations.                                                                                                                                                                                                                                                                                                         |
| 126.17e2    | United States and United Kingdom cooperative security and defense research, development, production, and support programs.                                                                                                                                                                                                                                                                  |
| 126.17e3    | Mutually determined specific security and defense projects where the Government of the United Kingdom is the end-user.                                                                                                                                                                                                                                                                      |
| 126.17e4    | Defense Trade Cooperation Treaty between United States and United Kingdom for U.S. Government end-use.                                                                                                                                                                                                                                                                                      |

## Directorate of Defense Trade Controls (DDTC) International Traffic and Arms Regulation (ITAR)

### Export Exemption Codes

| <i>Code</i> | <i>Description</i>                                                                                                                   |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 123.6       | From the United States to foreign trade zones in the United States or Customs bonded warehouse.                                      |
| 123.11b     | Vessel or aircraft does not enter territorial waters or airspace of a foreign country, and no defense articles are carried as cargo. |
| 123.12      | Shipments between U.S. possessions.                                                                                                  |
| 123.13      | Defense article on domestic air shipment via foreign country.                                                                        |
| 123.16b1    | Unclassified defense articles in support of agreements.                                                                              |
| 123.16b2    | Components or spare parts less than \$500.                                                                                           |
| 123.16b3    | Packing cases for defense articles.                                                                                                  |
| 123.16b4    | Unclassified models and mock-ups.                                                                                                    |

| <i>Code</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                   |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 123.16b5    | Temporary export for public exhibition, trade show, air show or related event if that article was previously licensed for public exhibition.                                                                                                                                                                                                                                         |
| 123.16b9    | Temporary export of any unclassified component, part, tool or test equipment to a subsidiary, affiliate or facility owned or controlled by the U.S. person if the component, part, tool or test equipment is used for manufacture, assembly, testing, production, or modification.                                                                                                   |
| 123.17a1    | Components and parts for Category I (a) firearms not exceeding \$100 wholesale.                                                                                                                                                                                                                                                                                                      |
| 123.17a2    | Components and parts for Category I firearms not exceeding \$500 wholesale to Canada.                                                                                                                                                                                                                                                                                                |
| 123.17b     | Non-automatic Category I (a) firearms manufactured in or before 1898 or replica.                                                                                                                                                                                                                                                                                                     |
| 123.17c     | Temporary export of no more than three non-automatic Category I(a) firearms and no more than 1,000 cartridges for personal use.                                                                                                                                                                                                                                                      |
| 123.17d     | Firearms in Category I(a) and related ammunition for foreign persons brought in under 27 CFR 478.115 (d).                                                                                                                                                                                                                                                                            |
| 123.17e     | Not more than 1,000 cartridges of ammunition for non-automatic firearms for personal use.                                                                                                                                                                                                                                                                                            |
| 123.17f     | Temporary export of one set of Body Armor covered by USML Category X(a)(1) which may include one helmet covered by USML Category X(a)(6), or one set of chemical agent protective gear covered by USML Category XIV(f)(4) which may include one additional filter canister for personal use.                                                                                         |
| 123.17g     | Temporary export of one set of body armor, which may include a helmet, or chemical agent protective gear, for personal use to countries listed in Section 126.1 of the ITAR by U.S. persons travelling in support of a U.S. Government contract or traveling on official U.S. Government business.                                                                                   |
| 123.17h     | Temporary exports of body armor, which may include a helmet, or chemical agent protective gear, which may include one additional filter canister, for personal use to Iraq.                                                                                                                                                                                                          |
| 123.17i     | Temporary exports of body armor, which may include a helmet, or chemical agent protective gear, which may include one additional filter canister, for personal use to Afghanistan.                                                                                                                                                                                                   |
| 123.18a1    | Non-automatic firearms in Category I(a) for servicemen's clubs for members of U.S. Armed Forces.                                                                                                                                                                                                                                                                                     |
| 123.18a2    | Non-automatic firearms in Category I(a) for personal use by member of U.S. Armed Forces or civilian employee of Department of Defense.                                                                                                                                                                                                                                               |
| 123.18a3    | Non-automatic firearms for personal use by U.S. Government employees with written authorization from Chief of the U.S. Diplomatic Mission.                                                                                                                                                                                                                                           |
| 123.18b     | Not more than 1,000 cartridges of ammunition for firearms in Category I(a) for personal use by U.S. Government employees.                                                                                                                                                                                                                                                            |
| 123.23      | Shipments when the total value does not exceed the value on the license by more than ten percent.                                                                                                                                                                                                                                                                                    |
| 126.2       | The DAS for DTC may order the temporary suspension or modification of any or all of the regulations in the interest of the security and foreign policy of the United States.                                                                                                                                                                                                         |
| 126.3       | Exceptional or undue hardship, or otherwise in the interest of the U.S. Government.                                                                                                                                                                                                                                                                                                  |
| 126.4a1     | 22 CFR 126.4(a)(1) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency or employee of U.S. Government when acting in an official capacity; or by persons in a contractual relationship with an agency of U.S. Government to conduct contracted-for activities within the scope of the contractual relationship. |

| <i>Code</i> | <i>Description</i>                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 126.4a2     | 22 CFR 126.4(a)(2) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency of U.S. Government for carrying out a cooperative project, program, or other activity in furtherance of an agreement or arrangement.                                                                                                            |
| 126.4a3     | 22 CFR 126.4(a)(3) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by an agency of U.S. Government for carrying out any foreign assistance or sales program authorized by law and subject to control by the President by other means.                                                                                           |
| 126.4a4     | 22 CFR 126.4(a)(4) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services by agency of U.S. Government for any other security cooperation programs and activities of the Department of Defense authorized by law and subject to control by the President by other means.                                                               |
| 126.4b1     | 22 CFR 126.4(b)(1) Export, Re-export, Re-Transfer or Temporary Import of defense article, technical data, or defense service when made by another person for an agency of the U.S. Government to an agency of the U.S. Government at its request.                                                                                                                                           |
| 126.4b2     | 22 CFR 126.4(b)(2) Export, Re-export, Re-Transfer or Temporary Import of defense articles, technical data, or defense services when made by another person for an agency of the U.S. Government to an entity other than the U.S. Government at the written direction of the U.S. Government for an activity authorized for that agency in paragraphs (a)(1) through (a)(4) of this section. |
| 126.5b      | Permanent or temporary export of certain defense articles, related technical data, and defense services for end-use in Canada.                                                                                                                                                                                                                                                              |
| 126.6a      | Defense article or technical data sold, leased, or loaned by Department of Defense to a foreign country or international organization.                                                                                                                                                                                                                                                      |
| 126.6c      | Defense article, technical data, or defense service sold, leased, or loaned by Department of Defense under Foreign Military Sales Program.                                                                                                                                                                                                                                                  |
| 126.16e1    | United States and Australian combined military or counter-terrorism operations.                                                                                                                                                                                                                                                                                                             |
| 126.16e2    | United States and Australian cooperative security and defense research, development, production, and support programs.                                                                                                                                                                                                                                                                      |
| 126.16e3    | Mutually determined specific security and defense projects where the Government of Australia is the end-user.                                                                                                                                                                                                                                                                               |
| 126.16e4    | Defense Trade Cooperation Treaty between United States and Australia for U.S. Government end-use.                                                                                                                                                                                                                                                                                           |
| 126.17e1    | United States and United Kingdom combined military or counter- terrorism operations.                                                                                                                                                                                                                                                                                                        |
| 126.17e2    | United States and United Kingdom cooperative security and defense research, development, production, and support programs.                                                                                                                                                                                                                                                                  |

| 1           | Certificate of Analysis                       | Certificate providing the values of an analysis.                                                                                                                                                                                                                      |
| 2           | Certificate of Conformity                     | Certificate certifying the conformity to predefined definitions                                                                                                                                                                                                       |
| 3           | Certificate of Quality                        | Certificate certifying the quality of goods, services etc.                                                                                                                                                                                                            |
| 5           | Product Performance Report                    | Report specifying the performance values of products.                                                                                                                                                                                                                 |
| 6           | Product Specification Report                  | Report providing specification values of products.                                                                                                                                                                                                                    |
| 7           | Process Data Report                           | Reports on events during production process.                                                                                                                                                                                                                          |
| 8           | First Sample Test Report                      | Self-explanatory.                                                                                                                                                                                                                                                     |
| 11          | Federal Label Approval                        | A pre-approved document relating to federal label approval requirements.                                                                                                                                                                                              |
| 12          | Mill Certificate                              | Certificate certifying a specific quality of agricultural products.                                                                                                                                                                                                   |
| 14          | Weight Certificate                            | Certificate certifying the weight of goods.                                                                                                                                                                                                                           |
| 15          | Weight List                                   | Document/message specifying the weight of goods.                                                                                                                                                                                                                      |
| 16          | Certificate                                   | Document by means of which the documentary credit applicant specifies the conditions for the certificate and by whom the certificate is to be issued.                                                                                                                 |
| 17          | Combined Certificate of Value and Origin      | Document identifying goods in which the issuing authority expressly certifies that the goods originate in a specific country or part of, or group of countries. It also states the price and/or cost of the goods with the purpose of determining the customs origin. |
| 19          | Certificate of Quantity                       | Certificate certifying the quantity of goods, services etc.                                                                                                                                                                                                           |
| 25          | Container Discharge List                      | Message/document itemizing containers to be discharged from vessel.                                                                                                                                                                                                   |
| 33          | Certificate of Sealing of Export Meat Lockers | Document/message issued by the authority in the exporting country evidencing the sealing of export meat lockers.                                                                                                                                                      |
| 93          | Casing Sanitary Certificate                   | Document or message issued by the competent authority in the exporting country evidencing that casing products comply with the requirements set by the importing country.                                                                                             |
| 94          | Pharmaceutical Sanitary Certificate           | Document or message issued by the competent authority in the exporting country evidencing that pharmaceutical products comply with the requirements set by the importing country.                                                                                     |
| 95          | Inedible Sanitary Certificate                 | Document or message issued by the competent authority in the exporting country evidencing that inedible products comply with the requirements set by the importing country.                                                                                           |
| 101         | Registration Document                         | An official document providing registration details.                                                                                                                                                                                                                  |
| 129         | Transport Cargo Release Order                 | Order to release cargo or items of transport equipment to a specified party.                                                                                                                                                                                          |

| <b>Code</b> | <b>Name</b>                                      | <b>Definition</b>                                                                                                                                                                                                                                                                                                         |
|-------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 130         | Invoicing Data Sheet                             | Document/message issued within an enterprise containing data about goods sold, to be used as the basis for the preparation of an invoice.                                                                                                                                                                                 |
| 145         | Cargo Vessel Discharge Order                     | Order that the containers or cargo specified are to be discharged from a vessel.                                                                                                                                                                                                                                          |
| 162         | Certified Inspection and Test Results            | A certification as to the accuracy of inspection and test results.                                                                                                                                                                                                                                                        |
| 165         | Payment or performance bond                      | A document indicating a bond that guarantees the payment of monies or a performance.                                                                                                                                                                                                                                      |
| 170         | Cargo Acceptance Order                           | Order to accept cargo to be delivered by a carrier.                                                                                                                                                                                                                                                                       |
| 183         | Container Stripping Order                        | Order to unload goods from a container.                                                                                                                                                                                                                                                                                   |
| 184         | Container Stuffing Order                         | Order to stuff specified goods or consignments in a container.                                                                                                                                                                                                                                                            |
| 265         | Transport Equipment Movement Report              | Report on one or more different movements of transport equipment.                                                                                                                                                                                                                                                         |
| 267         | Fumigation Certificate                           | Certificate attesting that fumigation has been performed.                                                                                                                                                                                                                                                                 |
| 268         | Wine Certificate                                 | Certificate attesting to the quality, origin, or appellation of wine.                                                                                                                                                                                                                                                     |
| 269         | Wool Health Certificate                          | Certificate attesting that wool is free from specified risks to human or animal health                                                                                                                                                                                                                                    |
| 271         | Packing List                                     | Document/message specifying the distribution of goods in individual packages (in trade environment the dispatch advice message is used for the packing list).                                                                                                                                                             |
| 283         | Tracking Number Assignment Report                | Report of assigned tracking numbers.                                                                                                                                                                                                                                                                                      |
| 315         | Contract                                         | Document/message evidencing an agreement between the seller and the buyer for the supply of goods or services; its effects are equivalent to those of an order followed by an acknowledgement of order.                                                                                                                   |
| 331         | Commercial Invoice Which Includes a Packing List | Commercial transaction (invoice) will include a packing list.                                                                                                                                                                                                                                                             |
| 380         | Commercial Invoice                               | Document/message claiming payment for goods or services supplied under conditions agreed between seller and buyer.                                                                                                                                                                                                        |
| 384         | Corrected Invoice                                | Commercial invoice that includes revised information differing from an earlier submission of the same invoice.                                                                                                                                                                                                            |
| 385         | Consolidated Invoice                             | Commercial invoice that covers multiple transactions involving more than one vendor.                                                                                                                                                                                                                                      |
| 520         | Insurance Certificate                            | Document/message issued to the insured certifying that insurance has been affected and that a policy has been issued. Such a certificate for a particular cargo is primarily used when good are insured under the terms of a floating or an open policy; at the request of the insured, it can be exchanged for a policy. |

| <b>Code</b> | <b>Name</b>                                      | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                                  |

| 610         | Forwarding Instructions                          | Document/message issued to a freight forwarder, giving instructions regarding the action to be taken by the forwarder for the forwarding of goods described therein.                                                                                                                                                                                                                                               |
| 621         | Forwarder's Advice to Import Agent               | Document/message issued by a freight forwarder in an exporting country advising his counterpart in an importing country about the forwarding of goods described therein.                                                                                                                                                                                                                                           |
| 640         | Delivery Order                                   | Document/message issued by a party entitled to authorize the release of goods specified therein to a named consignee, to be retained by the custodian of the goods.                                                                                                                                                                                                                                                |
| 811         | Export License                                   | Permit issued by a government authority permitting exportation of a specified commodity subject to specified conditions as quantity, country of destination, etc. Synonym: Embargo permit.                                                                                                                                                                                                                         |
| 852         | Sanitary Certificate                             | Document/message issued by the competent authority in the exporting country evidencing that alimentary and animal products, including dead animals, are fit for human consumption, and giving details, when relevant, of controls undertaken.                                                                                                                                                                      |
| 854         | Manufacturer's Statement/Certificate/Declaration | A statement from the manufacture attesting/verifying that commodity origin, description, manufacturing/manipulation, and treatments are in accordance with USDA APHIS regulations.                                                                                                                                                                                                                                 |
| 856         | Inspection Certificate                           | Document/message issued by a competent body evidencing that the goods described therein have been inspected in accordance with national or international standards, in conformity with legislation in the country in which the inspection is required, or as specified in the contract.                                                                                                                            |
| 861         | Certificate of Origin                            | Document/message identifying goods, in which the authority or body authorized to issue it, certifies expressly that the goods to which the certificate relates originate in a specific country. The word "country" may include a group of countries, a region or a part of a country. This certificate may also include a declaration by the manufacturer, producer, supplier, exporter or other competent person. |
| 862         | Declaration of Origin                            | Appropriate statement as to the origin of the goods, made in connection with their exportation by the manufacturer, producer, supplier, exporter or other competent person on the Commercial invoice or any other document relating to the goods (CCC).                                                                                                                                                            |
| 863         | Regional Appellation Certificate                 | Certificate drawn up in accordance with the rules laid down by an authority or approved body, certifying that the goods described therein qualify for a designation specific to the given region (e.g. champagne, port wine, Parmesan cheese).                                                                                                                                                                     |

| <b>Code</b> | <b>Name</b>                               | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 865         | Certificate of Origin Form GSP            | Specific form of certificate of origin for goods qualifying for preferential treatment under the generalized system of preferences (includes a combined declaration of origin and certificate, form A).                                                                                                                                                                                                                                                                                                                                |
| 870         | Consular Invoice                          | Document/message to be prepared by an exporter in his country and presented to a diplomatic representation of the importing country for endorsement and subsequently to be presented by the importer in connection with the import of the goods described therein.                                                                                                                                                                                                                                                                     |
| 871         | NHTSA Importer Substantiating Statement   | A written statement of the importer describing the use to be made of the nonconforming vehicle, including use on public roads, the estimated period of time during which use of the vehicle on the public roads is necessary, and the intended means of final disposition (and disposition date). Also, a written statement substantiating that the vehicle was not manufactured for use on the public roads, or that the equipment item was not manufactured for use on a motor vehicle or is not an item of motor vehicle equipment. |
| 872         | Signed Manufacturer's Compliance Letter   | A Canadian-certified vehicle that is being imported for personal use (and not for resale) must be accompanied by a letter from the vehicle's original manufacture (and not a franchised dealer) stating the vehicle meets all applicable U.S. safety, bumper, and theft prevention standards, except for certain minor labeling requirements or requirements that pertain to daytime running lights.                                                                                                                                   |
| 873         | Copy of Contract with Registered Importer | An importer who is not a Registered Importer but who imports a nonconforming vehicle must furnish a copy of the contract or other agreement that the importer has with a Registered Importer to bring the vehicle into conformance with all applicable safety and bumper standards.                                                                                                                                                                                                                                                    |
| 874         | Official Orders                           | A copy of the importer's official orders, or, if a qualifying member of a foreign government on assignment in the United States, the name of the embassy to which the importer is accredited.                                                                                                                                                                                                                                                                                                                                          |
| 875         | Incomplete Vehicle Document               | A written statement issued by the manufacturer of the incomplete vehicle that meets the requirements of 49 CFR 568.4.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 876         | Notice to Owners and Importers of Dogs    | CDC form used for importing dogs not accompanied by proof of rabies vaccination.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 877         | NOAA Form 370                             | This form is required for all frozen and processed tuna and tuna products entered into the United States and for any fish exported from a large-scale driftnet nation entered under any of the HTS numbers listed in US law 50 CFR 216.24(f)(2)                                                                                                                                                                                                                                                                                        |

| <b>Code</b> | <b>Name</b>                                             | <b>Definition</b>                                                                                                                                                                                                                                                                                       |

| 894         | Certificate of Admissibility     | A Certificate of Admissibility is a government attestation from a harvesting nation that the products being imported into the United States are not subject to an import prohibition under MSRA or the MMPA import provisions. The Certificate of Admissibility is a specific document that must be signed by a government official of the harvesting nation declaring the harvest information is accurate. The Certificate of Admissibility must accompany products from fisheries not subject to an import prohibition that may be similar to that fishery under an import prohibition. |
| 897         | Captain's Statement              | Captain of the harvesting vessel certifying that no dolphins were killed or seriously injured in the sets or other gear deployments in which the tuna were caught and, if applicable, no purse seine net was intentionally deployed on or used to encircle dolphins during the fishing trip.                                                                                                                                                                                                                                                                                              |
| 898         | Observer's Statement             | Observer certifying that no purse seine net was intentionally deployed on or to encircle dolphins during the fishing trip and no dolphins were killed or seriously injured in the sets in which the tuna were caught.                                                                                                                                                                                                                                                                                                                                                                     |
| 899         | IDCP Member Nation Certification | Representative of the appropriate IDCP-member nation certifying that: 1) there was an IDCP-approved observer on board the vessel during the entire trip; 2) no purse seine net was intentionally deployed on or to encircle dolphins during the fishing trip and no dolphins were killed or seriously injured in the sets in which the tuna were caught; 3) listing the number for the associated Tuna Tracking Forms which contain the captain's and observer's certifications.                                                                                                          |
| 911         | Import License                   | Document/message issued by the competent body in accordance with import regulations in force, by which authorization is granted to a named party to import either a limited quantity of designated articles or an unlimited quantity of such articles during a limited period, under conditions specified in the document.                                                                                                                                                                                                                                                                |
| 921         | DEA-236                          | Import declaration for non-narcotic controlled substances in schedules III, IV, and V                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 922         | DEA-486                          | Import declaration for List I and List II chemicals except Ephedrine, Pseudoephedrine, and Phenylpropanolamine                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| AM2         | Agreement for Temporary Transfer of Foreign Eggs (Form PY-222)           | IN CONSIDERATION of the U.S. Collector of Customs granting me (us) permission to transfer temporarily the products described in Section "C" which are offered for entry into the United States, under bond filed with said Collector of Customs and subject to the penalties prescribed in laws enacted by Congress and regulations issued hereunder by the Secretary of the Treasury, to hold the said products intact at the location indicated below until they have been inspected and passed by a Poultry Programs Representative or have been otherwise disposed of under the supervision of a U.S. Customs Officer or a Poultry Programs Representative. |
| AM3         | Self-Certification for Filer Completing FV 356                           | The undersigned applies for inspection of the processed food products described in this application in accordance with the regulations of the Secretary of Agriculture (7 CFR). To the best of my knowledge and belief, these containers are not from lots which have been previously inspected by the U.S. Department of Agriculture and are in no way the subject of controversy with any government agency.                                                                                                                                                                                                                                                  |
| AM4         | Importation of Organic Product Certification Statement (0581-0191)       | I CERTIFY that the agricultural products specified hereon have been certified under an organic certification program that is at least equivalent to the requirements of the Organic Foods Production Act of 1990 (OFPA) (7 U.S.C. Sec. 6501 et seq.) and are therefore deemed by USDA to have been produced and handled in accordance with the OFPA and USDA organic regulations under the National Organic Program 7 CFR part 205.                                                                                                                                                                                                                             |
| AP6         | Importation of Plant and Plant Product Certification Statement (PPQ 505) | I certify under penalty of perjury that the information furnished is true and accurate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CD1         | CDC Import Exempt from Permits                                           | I certify under penalty of perjury that the information furnished is true and correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CPY         | Certificate Exists                                                       | Indicates existence of a Certificate that meets the requirements of sections 14 and 17 of the CPSA, and 16 CFR part 1110 for the regulated finished product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Please refer to the Food and Drug Administration (FDA) Implementation Guide for proper use of the different FDA units of measure.

## PG30 – Inspection or Arrival Location Codes

| <b>Code</b> |  | <b>Name</b>                                             | <b>Definition</b>                                                                                                                                                                                                                                                                                                               |
|-------------|--|---------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           |  | Schedule K                                              | The Schedule K (Classification of Foreign Ports) lists the major seaports of the world directly handling waterborne shipments in the foreign trade of the United States, and includes numeric codes identifying these ports.                                                                                                    |
| 2           |  | Schedule D                                              | The Census Schedule D representing the CBP port codes.                                                                                                                                                                                                                                                                          |
| 3           |  | UN LOCODE                                               | UN LOCODE is a geographic coding scheme developed and maintained by United Nations Economic Commission for Europe, a unit of the United Nations. UN LOCODE assigns codes to locations used in trade and transport with functions such as seaports, rail and road terminals, airports, post offices, and border crossing points. |
| 4           |  | FIRMS Code                                              | Facility Information Resource Management System (FIRMS) is a program whereby U.S. Customs & Border Protection manages customs bonded facilities. A specific code is assigned to each bonded facility, the FIRMS code. This is required as part of the entry by the importer to identify the location of the imported goods.     |
| 7           |  | DUNS                                                    | DUNS number associated a physical location of an entity (such as branches, divisions, and headquarters)                                                                                                                                                                                                                         |
| 8           |  | Inspection Establishment Number Qualifier               | Government assigned number for Import establishment to conduct inspections.                                                                                                                                                                                                                                                     |
| 9           |  | Export Establishment Number Qualifier                   | Government assigned number for Export establishment where the product is exported from.                                                                                                                                                                                                                                         |
| 10          |  | FSIS Processing Establishment Number Qualifier          | Government assigned number for egg processing establishment.                                                                                                                                                                                                                                                                    |
| 11          |  | FDA Registered Establishment Number Qualifier           | FDA registered establishments to process, store, label, package or distribute FDA regulated products.                                                                                                                                                                                                                           |
| 12          |  | APHIS Registered Establishment Number Qualifier         | APHIS registered quarantine establishment.                                                                                                                                                                                                                                                                                      |
| 13          |  | APHIS Holding Registered Establishment Number Qualifier | APHIS registered holding establishment to hold Animal or species.                                                                                                                                                                                                                                                               |
| 14          |  | Country Code                                            | ISO Country Code. See Appendix B (International Organization for Standardization (ISO) Country and Currency Codes) in the ACE ABI CATAIR.                                                                                                                                                                                       |

## PG31 – Commodity Harvesting Vessel Characteristic Type Codes

| <b>Code</b> | <b>Name</b>                                            | <b>Definition</b>                                                                                                                                                                               |
|-------------|--------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SBT         | CCSBT Registration Number                              | Registration number assigned by the Commission for the Conservation of Southern Bluefin Tuna (CCSBT) for fishing vessels, which are authorized to fish southern Bluefin tuna.                   |
| HPT         | Home Port                                              | A vessel's home port is the port at which it is based, which may not be the same as its port of registry (flag).                                                                                |
| TTC         | IATTC Vessel Number                                    | Number assigned by the Inter-American Tropical Tuna Commission (IATTC) for the fishing vessel authorized to fish in the eastern Pacific Ocean.                                                  |
| CAT         | ICCAT Record Number                                    | Record number established by the International Commission for the Conservation of Atlantic Tunas (ICCAT) for the fishing vessel authorized to fish tuna in the Atlantic Ocean and adjacent seas |
| IMO         | International Maritime Organization number             | The number is assigned by Lloyd's Register – Fairplay Ltd. on behalf of the IMO. It consists of the three letters IMO followed by seven numbers.                                                |
| IOT         | IOTC Record Number                                     | Record number assigned by the Indian Ocean Tuna Commission (IOTC) for the fishing vessel authorized to fish tuna and tuna-like species in the Indian Ocean and adjacent seas.                   |
| LRN         | Lloyds Registration Number                             | The IMO Ship Identification Number, a unique seven-digit number assigned to propelled, seagoing vessels of 100 gross tons and above.                                                            |
| NRN         | National Registration Number                           | Registration number assigned by the country of registry.                                                                                                                                        |
| LOA         | Vessel overall length                                  | Total overall length of the vessel.                                                                                                                                                             |
| PMT         | Flag state permit number                               | Authorized number assigned to the vessel by the state/country under whose laws the vessel is registered or licensed.                                                                            |
| RFO         | Regional Fishery Organization authorized vessel number | The unique vessel number assigned by an international organization formed by countries with fishing interests in an ocean area to manage fish stocks.                                           |
| OTH         | Other Vessel Identifier                                | A unique identification or number assigned to a specific vessel by a country, formal organization or other entity responsible for or authorized to manage fishery vessel's harvests             |
| VCR         | Vessel Country of Registration                         | The ISO 3166-1 code for the country of registry (flag) of the vessel.                                                                                                                           |
| VCS         | Vessel Call Sign Code                                  | Characters assigned to the vessel for communication purposes.                                                                                                                                   |
| VNM         | Vessel Name                                            | Name of the harvesting vessel.                                                                                                                                                                  |

## PG32 – Commodity Routing Type Codes

| <b>Code</b> | <b>Name</b>            | <b>Definition</b>                                                                                                                                            |
|-------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11          | Place of Discharge     | Seaport, airport, freight terminal, rail station or other place at which goods are unloaded from the means of transport having been used for their carriage. |
| 13          | Place of transshipment | Place where goods are to be or have been transferred from one means of transport to another during the course of one transport operation.                    |
| 49          | Transit country        | Country through which a goods or passengers are routed between the country of original departure and final destination.                                      |
| 198         | Original location      | Identifies the original location where routing to the US began.                                                                                              |

Use 49 for any location; country, political subunit, or geographic area, through which the commodity passed between origin and final destination.

## PG60 – Additional Information Qualifier Codes

| <b>Code</b> | <b>Name</b>   | <b>Definition</b>                                                                                                                     |
|-------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------|
| CIT         | Citation Code | A consumer product safety rule under the CPSA, or similar rule, ban, standard, or regulation under any law enforced by the Commission |

## PG32 – Commodity Political Subunit of Routing Qualifier

| <b><i>Code</i></b> | <b><i>Name</i></b> | <b><i>Definition</i></b>                                                                                                                                                                                                                                                                                                        |
|--------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                  | Schedule K         | The Schedule K (Classification of Foreign Ports) lists the major seaports of the world directly handling waterborne shipments in the foreign trade of the United States, and includes numeric codes identifying these ports.                                                                                                    |
| 2                  | UN LOCODE          | UN LOCODE is a geographic coding scheme developed and maintained by United Nations Economic Commission for Europe, a unit of the United Nations. UN LOCODE assigns codes to locations used in trade and transport with functions such as seaports, rail and road terminals, airports, post offices, and border crossing points. |
